FORWARD-LOOKING STATEMENTS Certain statements made in this annual report are forward-looking statements that involve risks and uncertainties. The words "anticipate," "believe," "expect," "intend," "project," "may," "will," "should,""could" and similar expressions are intended to identify those forward-looking statements. These forward-looking statements reflect the Company's best judgment based on current information and, although we base these statements on circumstances that we believe to be reasonable when made, there can be no assurance that future events will not affect the accuracy of such forward-looking information. As such, the forward-looking statements are not guarantees of future performance, and actual results may vary materially from the projected results and expectations discussed in this report. Factors that might cause the Company's actual results to differ materially from those anticipated in forward-looking statements include, but are not limited to: (1) competitive pressure on sales and pricing, including pressure from imports and substitute materials; (2) U.S. and foreign trade policies affecting steel imports or exports; (3) the sensitivity of the results of our operations to prevailing market steel prices and changes in the supply and cost of raw materials, including pig iron, iron ore and scrap steel; (4) the availability and cost of electricity and natural gas which could negatively affect our cost of steel production or result in a delay or cancellation of existing or future drilling within our natural gas drilling programs; (5) critical equipment failures and business interruptions; (6) market demand for steel products, which, in the case of many of our products, is driven by the level of nonresidential construction activity in the United States; (7) impairment in the recorded value of inventory, equity investments, fixed assets, goodwill or other long-lived assets; (8) uncertainties surrounding the global economy, including excess world capacity for steel production; (9) fluctuations in currency conversion rates, inflation and interest rates (10) significant changes in laws or government regulations affecting environmental compliance, including legislation and regulations that result in greater regulation of greenhouse gas emissions that could increase our energy costs, capital expenditures and operating costs or cause one or more of our permits to be revoked or make it more difficult to obtain permit modifications; (11) the cyclical nature of the steel industry; (12) capital investments and their impact on our performance; (13) our safety performance; and (14) the impact of the COVID-19 pandemic and any variants of the virus.

Dear Stockholders,

2021 was a remarkable year for our company. Our nearly 29,000 teammates did a tremendous job executing on our company's mission to grow our core steelmaking businesses, expand beyond into related businesses that fit our culture and expertise, and live our culture of delivering world-class results in: safety, teamwork, integrity and open communication. Their focus and dedication enabled us to take advantage of the best steel market conditions any of us ever experienced. Nucor teammates delivered records in Safety, Profits, Sales, and Shipments while expanding the capabilities offered to our incredible customers who rely on Nucor for their needs today and well into the future.

I am also extremely pleased to report that 2021 was our Safest year ever, improving once again on the progress we made in both 2019 and 2020. Sixteen Nucor divisions had zero recordable injuries in 2021 and we look forward to the day when our entire company achieves this level of safety performance. I want to thank each of our Nucor teammates for their daily commitment to safety and caring for one another, as we move toward our goal of becoming the World's Safest Steel Company.

FINANCIAL HIGHLIGHTS

Strong demand across most of the end-use markets we serve and the disciplined execution of our growth strategy in recent years drove our record financial results. In 2021, we set an earnings record of \$6.83 billion or \$23.16 per diluted share, well above our previous record of \$2.36 billion or \$7.42 per diluted share set in 2018.

Numerous Nucor businesses set profitability records, including our sheet mills, rebar and merchant bar mills, engineered bar mills, plate mills, structural mills, joist and deck, tubular products, cold finished bars and fasteners.

Consolidated net sales in 2021 of \$36.48 billion increased by 81% compared with consolidated net sales of \$20.14 billion in 2020. We shipped a record 28.2 million total tons to outside customers, for an increase of 11% from the previous year, while the average sales price per ton increased 64%. Capacity utilization rates at our steel mills averaged 94%. The average scrap and scrap substitute cost per gross ton used increased 62% to \$469 from \$290 in 2020.

At the end of 2021, the Board of Directors increased the regular quarterly cash dividend on our common stock from \$0.405 to \$0.50 per share – an increase of 23%. The base cash dividend has been increased by the Board every year since the Company began paying dividends in 1973. Nucor has made 195 consecutive quarterly cash dividend payments.

Numerous Nucor businesses set profitability records.

For the year, Nucor returned approximately \$3.76 billion to stockholders in the form of share repurchases and dividend payments. That represents approximately 55% of Nucor's net income for 2021. Nucor repurchased 33.8 million shares at an average cost of approximately \$96.92 per share during the year.

Company operations generated strong operating cash flow of approximately \$6.2 billion for the year. Cash and cash equivalents, short-term investments and restricted cash and cash equivalents totaled \$2.76 billion at year end. Adding to Nucor's strong liquidity, our \$1.75 billion revolving credit facility is undrawn and does not expire until November 2026.

Our record financial performance is the result of years of work reinvesting to strategically position and grow our portfolio of capabilities across the steel value chain. We are proud of our performance, but not satisfied. We are focused on the future and how we can best position Nucor for even greater success going forward.

TO OUR STOCKHOLDERS 5

GROWING THE CORE

In 2021, we made several moves to grow our core steelmaking business. The most significant of these was the announcement of the largest capital investment in Nucor history - the construction of a new steel sheet mill in Mason County, West Virginia. The mill will have some of the most advanced capabilities and one of the lowest carbon footprints of any sheet mill in the world. The location we have chosen along the Ohio River will give us important transportation and logistics advantages that will position us well to serve the country's two largest sheet steel consuming regions - the Midwest and the Northeast. This is a transformational project that will create substantial long-term value for our teammates, customers, stockholders and communities in West Virginia.

We are also expanding our geographic reach to the West Coast through the purchase of a 51% stake in California Steel Industries (CSI). This will be our second joint venture partnership with JFE Steel Corporation. CSI is a flat-rolled converter operation that will enable us to grow our portfolio of value-added sheet products and supply our downstream businesses in the Western US.

Turning to investments in our existing sheet mills, Nucor Steel Gallatin's hot band modernization and expansion was completed in early 2022. This project gives the Gallatin mill new, thicker slab casting and wider coil capabilities, expanding our product portfolio into markets currently served by higher-cost competitors. In Arkansas, our Hickman sheet mill produced its first prime coil from its new 3rd Generation Flexible Galvanizing Line. The new galvanizing line, combined with Hickman's highly successful specialty cold rolling mill, uniquely positions our company among North American EAF-based steelmakers to provide the high-strength, lightweight steels that are increasingly in demand from our automotive OEM customers.

Our other significant greenfield project – our new plate mill in Kentucky – is on track to begin rolling its first steel plate product at the end of 2022. With the capability to manufacture a complete range of plate sizes and grades for the North American market, the Kentucky plate mill will position Nucor as the supplier of choice in the region, including applications in offshore wind, heavy equipment, oil & gas, construction and national defense.

Our culture is our most powerful and enduring competitive advantage.

Our investments in sheet and plate production seize on opportunities presented by the increased emphasis on economic efficiency and lower emissions throughout the economy. No other North American producer is better positioned than Nucor to continue leading in these areas. With our team's disciplined focus on execution, we intend to deliver very attractive returns from these investments.

EXPANDING BEYOND

We are also pursuing opportunities to expand beyond into related businesses where we can successfully apply our manufacturing expertise and culture to achieve a competitive advantage.

We made two acquisitions in 2021 that advance this strategy. The first was our acquisition of Cornerstone Building Brands' Insulated Metal Panels (IMP) business consisting of the CENTRIA and Metl-Span brands. Our existing IMP business, TrueCore, together with CENTRIA and Metl-Span make up the Nucor Insulated Panel Group. We are now the clear leader in this market in the United States. IMP products are gaining market share as companies and institutions continue to focus on enhanced environmental performance and energy efficiency in the built environment. We also acquired Hannibal Industries, one of the largest steel pallet rack manufacturers in the U.S.

The addition of CENTRIA, Metl-Span and Hannibal Industries to Nucor's line of businesses creates a new growth platform that broadens our product offerings into the high-growth markets of e-commerce warehouses, distribution centers, and cold storage, and are businesses that are less cyclical than our traditional steel business. We are already a significant provider of steel beams, as well as joist and deck products into these applications.

LIVING OUR CULTURE

Our culture is our most powerful and enduring competitive advantage, and it served as an important guide as we navigated the unpredictable last two years dominated by the Covid-19 pandemic.

Safety is the most important value in the Nucor culture because the strongest evidence of our culture is how we care for one another. And as was noted at the opening of this letter, 2021 was the safest year in Nucor history.

TO OUR STOCKHOLDERS 7

Another important way that we live our culture is by having a team that reflects and respects the diversity of the communities where we operate. During this year we focused more than ever before on advancing our efforts to be a more inclusive organization.

We continue to evaluate what we can do better, differently, or more of, to accelerate our progress. We reviewed the many initiatives we have in place and started new ones to achieve our goal to become a more inclusive and diverse company. These efforts helped us to achieve a 33% improvement in minority representation and a 30% improvement in female representation at the executive leadership level over the past year. We firmly believe that having an increased diversity of perspectives on our team will benefit our company and all of our stakeholders.

While we believe that our increased focus on equity in recruitment, hiring and promotions has made a positive impact throughout our organization, we know there is still progress to be made. We are working to increase the representation of minorities and women among our leadership. We will continue to evaluate our approach and create opportunities to improve.

SUSTAINABLE STEEL FOR A MODERN ECONOMY

Our company has been built on a sustainable business model. We pioneered the use of recycling to make new steel, which has given us a leadership position as one of the cleanest steelmakers in the world. Our greenhouse gas emissions are less than one-third the global average and nearly one-fifth of the average blast furnace-based steel producer. Today, our emissions per ton of steel produced are already lower than the Paris Agreement's most aggressive 2030 target for the global steel sector.

In 2021, we announced that we plan to raise the bar on our industry-leading performance. We have committed to reducing our GHG emissions intensity another 35% by 2030. We are also helping to accelerate the U.S. energy transition through our support for new wind and solar farms. This year we also launched the industry's first certified net-zero carbon steel product line available at scale, Econiq™, which will help our customers meet their sustainability goals and give us a competitive advantage in the growing market for clean steel products.

The green economy is being built on steel and the type of steel it is built on *matters*. That is why we want to be the supplier of choice as more of our customers look to reduce greenhouse gas emissions in their supply chains.

Clean American steel products will also be used to help rebuild our nation's infrastructure in a sustainable way. Near the end of the year, Congress passed an infrastructure spending bill that includes a significant amount of new money to rebuild our roads, bridges, railroads, energy systems, waterways and ports. The bill will result in additional demand for steel and steel products, and it contains strong Buy America requirements. With roughly 50% of our products going into the construction market, Nucor is well positioned to supply sustainable steel for these critically important projects.

The green economy is being built on steel and the type of steel it is built on *matters*.

LOOKING AHEAD

Our team had a spectacular year in 2021, but we are not taking our foot off the gas. We will need the same focus on project execution, safety performance and reliable operations in 2022. We expect demand in many of the end-use markets we serve to remain robust and, as detailed above, we have several major investment projects under construction or coming online. It is an exciting time for the Nucor team.

We also want to recognize Jim Frias, Chief Financial Officer, Treasurer and Executive Vice President, who is retiring after 31 years of outstanding service to Nucor. While Jim's leadership and commitment to Nucor will be missed, we are very pleased that Steve Laxton is stepping into the role of Chief Financial Officer—a demonstration of the thoughtful leadership transition process that ensures our long-term success and stability as a company.

We are proud we have been able to deliver such strong returns on the capital that you, our stockholders, entrust to us. We are excited about the new steelmaking capabilities we are adding and look forward to continuing to work with our customers to meet their needs for high-quality, sustainable steel products.

Sincerely,

Leon J. Topalian

President & Chief Executive Officer

TO OUR STOCKHOLDERS 9

Dear Fellow Stockholders:

I am pleased to report that the Nucor Team achieved a phenomenal year in 2021 – setting new records for earnings, revenue, steel shipments and, most importantly, safety. Our nearly 29,000 Nucor teammates created tremendous value for you, our stockholders.

We continue to execute our long-term growth strategy, which is producing excellent results for the company. Several capital investment projects started operations this year and more will start up in 2022. Nucor announced approximately \$5.5 billion in capital investments and acquisitions in 2021, including the largest capital investment project in company history – a new state-of-the-art sheet steel mill in West Virginia – and several strategic acquisitions of downstream businesses that give Nucor further exposure to fast growing markets such as e-commerce warehouses and distribution centers. Leon provides more details on these projects in his letter to you.

This year we were proud to welcome Norma Clayton to our Board of Directors. Norma spent more than 20 years working at Boeing and served in various leadership roles for the company, including Vice President for Learning, Training and Development. Prior to her work with Boeing, Norma also held leadership positions at General Electric, General Motors, Lockheed Martin and RCA. She also currently serves as Chair of the Board of Trustees of Tuskegee University and has served on the Board of Trustees since 2009. She brings extensive experience in business management, manufacturing operations, and human resources to the Board.

The strong financial results Nucor achieved this year allowed the Board to increase the quarterly cash dividend by 23%, from \$0.405 to \$0.50 per share. Nucor's base cash dividend has been increased by the Board every year since the Company began paying dividends in 1973. Nucor returned a record amount, approximately \$3.76 billion, to stockholders in 2021, via both dividend payments and share repurchases.

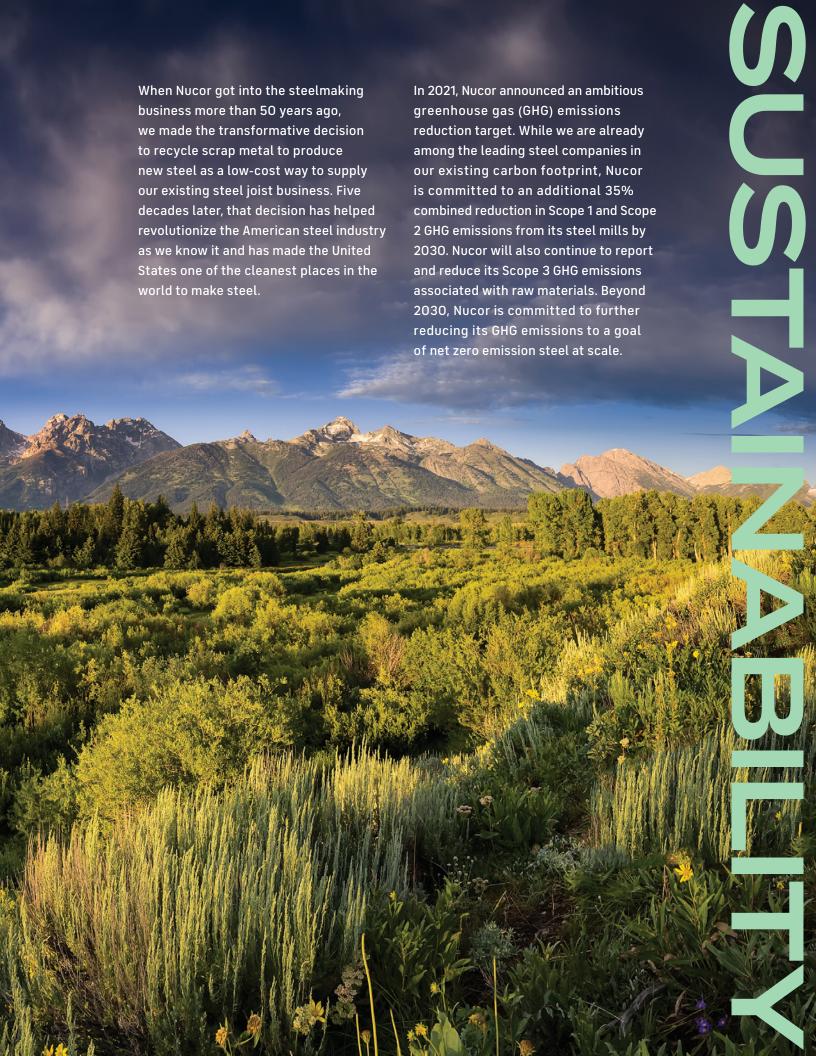

On behalf of the Board of Directors, the Nucor Executive Leadership Team, and the men and women who make up the Nucor family, we appreciate the capital you have invested in the company. We look forward to building on the strong results the company achieved this year.

Sincerely,

John H. Walker

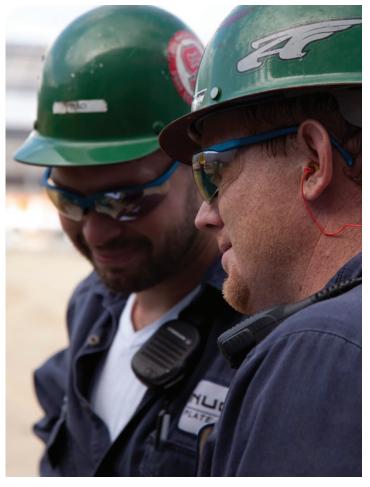

Non-Executive Chairman

OPERATIONS REVIEW 13

In the steel mills segment, Nucor produces sheet steel (hot-rolled, cold-rolled and galvanized), plate steel, structural steel (wide-flange beams, beam blanks, H-piling and sheet piling) and bar steel (blooms, billets, concrete reinforcing bar, merchant bar and engineered special bar quality ("SBQ")). Nucor manufactures steel principally from scrap steel and scrap steel substitutes using electric arc furnaces ("EAFs"), continuous casting and automated rolling mills. The steel mills segment also includes Nucor's equity method investments in NuMit LLC ("NuMit") and Nucor-JFE Steel Mexico, S. de R.L. de C.V. ("Nucor-JFE"), as well as international trading and distribution companies that buy and sell steel manufactured by the Company and other steel producers.

BAR MILLS

Nucor has 15 bar mills strategically located across the United States that manufacture a broad range of steel products, including concrete reinforcing bars, hot-rolled bars, rounds, light shapes, structural angles, channels, wire rod and highway products in carbon and alloy steels. Four of the bar mills have a significant focus on manufacturing SBQ and wire rod products.

Steel produced by our bar mills has a wide usage serving end markets, including the agricultural, automotive, construction, energy, furniture, machinery, metal building, railroad, recreational equipment, shipbuilding, heavy truck and trailer market segments. Considering Nucor's production capabilities and the mix of bar products generally produced and marketed, the capacity of the bar mills is estimated at approximately 9,560,000 tons per year.

Reinforcing and merchant bar steel are sold in standard sizes and grades, which allows us to maintain inventory levels of these products to meet our customers' expected orders. Our SBQ products are hot-rolled to exacting specifications primarily servicing the automotive, energy, agricultural, heavy equipment and transportation sectors.

In December 2021, Nucor announced that it expects to build a rebar micro mill at a to-be-determined location in the South Atlantic region.

SHEET MILLS

Nucor operates five strategically located sheet mills that utilize thin slab casters to produce flat-rolled steel for automotive, appliance, construction, pipe and tube and many other industrial and consumer applications. Considering Nucor's production capabilities and the mix of flat-rolled products generally produced and marketed, the capacity of the sheet mills is estimated at approximately 11,300,000 tons per year. All of our sheet mills are equipped with galvanizing lines and four of them are equipped with cold rolling mills for the further processing of hot-rolled sheet steel.

Nucor produces hot-rolled, cold-rolled and galvanized sheet steel to customers' specifications. Contract sales within the steel mills segment are most notable in our sheet operations, as it is common for contract sales to account for the majority of sheet sales in a given year. We estimate that greater than 80% of our sheet steel sales in 2021 were to contract customers. The balance of our sheet steel sales were made in the spot market at prevailing prices at the time of sale. The amount of tons sold to contract customers at any given time depends on a variety of factors, including our consideration of current and future market conditions, our strategy to appropriately balance spot and contract tons in a manner to meet our customers' requirements while considering the expected profitability, our desire to sustain a diversified customer base, and our end-use customers' perceptions about future market conditions. These sheet

sales contracts are noncancellable agreements that generally incorporate monthly or quarterly price adjustments reflecting changes in the current market-based indices and/or raw material cost, and typically have terms ranging from six to 12 months.

In January 2022, Nucor announced that it expects to build a new, state-of-the-art sheet mill in West Virginia. In February 2022, Nucor completed its acquisition of a majority ownership position in California Steel Industries, Inc. ("CSI"), a flat-rolled steel converter, based in Fontana, California, expanding the reach of Nucor's sheet mill group to the west coast of the United States.

STRUCTURAL MILLS

Nucor operates two structural mills that produce wideflange steel beams, pilings and heavy structural steel products for fabricators, construction companies, manufacturers and steel service centers. Nucor owns a 51% interest in Nucor-Yamato Steel Company (Limited Partnership) ("Nucor-Yamato") located in Blytheville, Arkansas. Nucor-Yamato is the only North American producer of high-strength, low-alloy beams. Common applications for the high-strength, low-alloy beams include gravity columns for high-rise buildings, longspan trusses for stadiums and convention centers, and for all projects where seismic design is a critical factor. The benefits of high strength, low alloy beams are increasingly recognized by Nucor's customers in the construction sector. These include savings in terms of construction time, weight, space, and overall environmental impact. Nucor sells its high-strength, low alloy beams under the trade name $AEOS^{TM}$.

Nucor also owns a steel beam mill in Berkeley County, South Carolina. Considering Nucor's production capabilities and the mix of structural products generally produced and marketed, the capacity of the two structural mills is estimated at approximately 3,250,000 tons per year. Both mills use a special continuous casting method that produces a beam blank closer in shape to that of the finished beam than traditional methods.

Structural steel products come in standard sizes and grades, which allows us to maintain inventory levels of these products to meet our customers' expected orders.

PLATE MILLS

Nucor operates three plate mills that produce plate for manufacturers of barges, bridges, heavy equipment, rail cars, refinery tanks, ships, wind towers and other items. Our products are further used in the pipe and tube, pressure vessel, transportation and construction industries. Considering Nucor's production capabilities and the mix of plate products generally produced and marketed, the capacity of the plate mills is estimated at approximately 2,925,000 tons per year. Nucor is currently constructing a state-of-the-art plate mill in Brandenburg, Kentucky with an anticipated start-up date of late 2022.

Plate steel products come in standard sizes and grades, which allows us to maintain inventory levels of these products to meet our customers' expected orders.

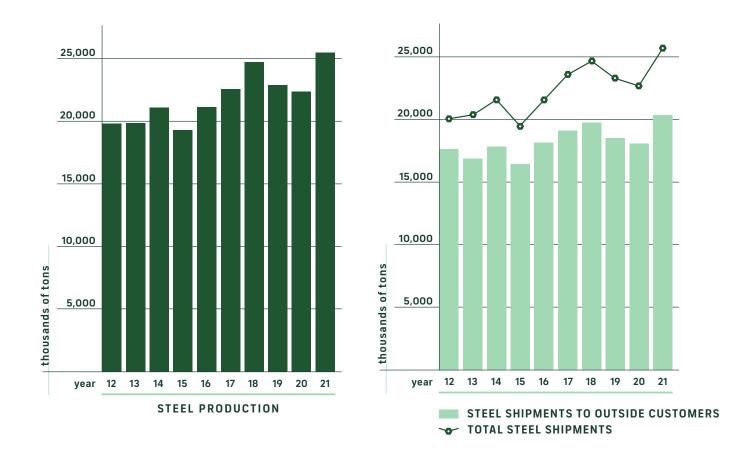

STEEL JOINT VENTURES

Nucor owns 50% interests in a North American sheet steel processing joint venture and a galvanized sheet steel plant in Mexico.

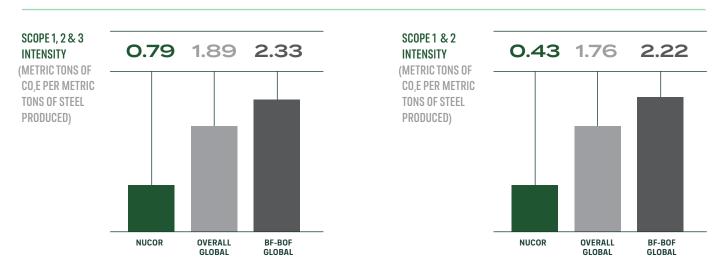

Nucor owns a 50% economic and voting interest in NuMit, a company that owns 100% of the equity interest in Steel Technologies LLC ("Steel Technologies"), an operator of 30 strategically located sheet processing facilities in the United States, Canada and Mexico. Steel Technologies transforms flat-rolled steel into products that meet the exact specifications for customers in a wide range of industries, including the automotive, agricultural and consumer goods markets.

Nucor owns a 50% economic and voting interest in Nucor-JFE, a joint venture with JFE Steel Corporation ("JFE") of Japan that operates a galvanized sheet steel plant in central Mexico that is expected to supply the country's automotive market with an annual capacity of approximately 400,000 tons.

OPERATIONS REVIEW 15

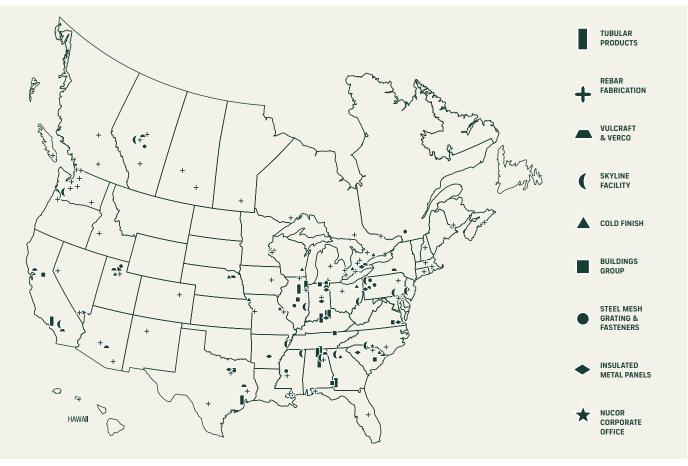

A GLOBAL LEADER IN STEELMAKING SUSTAINABILITY

OPERATIONS REVIEW 17

In the steel products segment, Nucor produces hollow structural section ("HSS") steel tubing, electrical conduit, steel racking, steel joists and joist girders, steel deck, fabricated concrete reinforcing steel, cold finished steel, steel fasteners, metal building systems, insulated metal panels, steel grating and expanded metal, and wire and wire mesh. The steel products segment also includes our piling distributor. These products are sold primarily for use in nonresidential construction applications.

TUBULAR PRODUCTS

The Nucor Tubular Products ("NTP") group has eight tubular facilities that are strategically located in close proximity to Nucor's sheet mills as they are a consumer of hot-rolled coil. The NTP group produces HSS steel tubing, mechanical steel tubing, galvanized solar torque tube, piling, sprinkler pipe, heat-treated tubing and electrical conduit. HSS steel tubing, mechanical steel tubing and sprinkler pipe are used in structural and mechanical applications, including nonresidential construction, infrastructure, agricultural, automotive and construction equipment end-use markets. Heat-treated tubing and electrical conduit are primarily used to protect and route electrical wiring in various nonresidential structures such as hospitals, schools, office buildings, hotels, stadiums and shopping malls. Solar torque tube is an essential component for ground-mount solar systems.

In August 2021, Nucor acquired Hannibal Industries, Inc. (Hannibal), a leading national provider of steel racking solutions. Total annual NTP capacity is approximately 1,500,000 tons. In March 2021, Nucor announced that it expects to build a new tube mill on the site of its Kentucky sheet mill.

REBAR FABRICATION

Harris Steel fabricates, installs and distributes rebar for a wide variety of construction work classified as infrastructure (e.g., highways, bridges, reservoirs, utilities and airports) and various building projects, including hospitals, schools, stadiums, commercial office buildings and multi-tenant residential construction. We

sell and install fabricated reinforcing products primarily on a construction contract bid basis.

Reinforcing products are essential to concrete construction. They supply tensile strength, as well as additional compressive strength, and protect the concrete from cracking. In many markets, Harris sells reinforcing products on an installed basis (i.e., Harris fabricates the reinforcing products for a specific application and performs the installation). Harris operates nearly 70 fabrication facilities across the United States and Canada, with each facility serving a local market. Total annual rebar fabrication capacity is approximately 1,686,000 tons.

VULCRAFT/VERCO

The Vulcraft/Verco group is the nation's largest producer and leading innovator of open-web steel joists, joist girders and steel decking, which are used primarily for nonresidential building construction. Steel joists and joist girders are produced and marketed throughout the United States by seven domestic Vulcraft facilities. The Vulcraft/Verco group's steel decking is produced and marketed throughout the United States by nine domestic plants. Six of these plants are adjacent to Vulcraft joist facilities. The Vulcraft/Verco group also has two plants in Canada, one in Eastern Canada and one in Western Canada, that produce both joist and deck. The annual joist production capacity is approximately 745,000 tons and the annual deck production capacity is approximately 560,000 tons.

Sales of steel joists, joist girders and steel decking are dependent on the nonresidential building construction market. The majority of

steel joists, joist girders and steel decking are used extensively as part of the roof and floor structural support systems in warehouses, data centers, manufacturing buildings, retail stores, shopping centers, schools, hospitals, and, to a lesser extent, in multi-story buildings and apartments. We make these products to the customers' specifications and do not sell these finished steel products out of inventory. The majority of these contracts are firm, fixed-price contracts that are, in most cases, competitively bid against other suppliers.

PILING PRODUCTS

Skyline Steel LLC and its subsidiaries ("Skyline") are primarily a steel foundation distributor serving the North American market. Skyline distributes products to service marine construction, bridge and highway construction, heavy civil construction, storm protection, underground commercial parking and environmental containment projects in the infrastructure and construction industries. Skyline also manufactures a complete line of geostructural foundation solutions, including threaded bar, micropile, strand anchors and hollow bar. It also processes and fabricates spiral weld pipe piling, rolled and welded pipe piling, cold-formed sheet piling and threaded bar.

COLD FINISH

Nucor Cold Finish ("NCF") is the largest and most diversified producer of cold finished bar products for a wide range of industrial markets in North America, with assets in Canada, Mexico and throughout the United States. The total capacity of the Nucor cold finished bar and wire facilities exceeds approximately 1,069,000 tons per year.

Nucor's cold finished facilities are among the most modern in the world, producing cold finished bars for the most demanding applications. NCF obtains most of its steel from the Nucor bar mills, ensuring consistent quality and supply through all market conditions. These facilities produce cold-drawn, turned, ground and polished steel bars that are used extensively for shafting and other precision machined applications. NCF produces rounds, hexagons, flats and squares in carbon, alloy and leaded steels. These bars are purchased by the appliance, automotive, construction equipment, electric motor, farm machinery and fluid power industries, as well as by service centers. NCF

bars are used in tens of thousands of products. A few examples include anchor bolts, hydraulic cylinders and shafting for air conditioner compressors, ceiling fan motors, garage door openers, electric motors and lawn mowers.

Nucor owns a fully integrated precision castings company, Corporacion POK, S.A. de C.V. ("POK"), with a facility in Guadalajara, Mexico. POK produces complex castings and precision machined products used by the oil and gas, mining and sugar processing industries. POK produces a wide array of precision castings using steel, bronze, iron and specialty exotic alloys. POK complements NCF's businesses and Nucor's cold finish facility in Monterrey.

BUILDINGS GROUP

Nucor produces metal buildings and components throughout the United States under the following brands: Nucor Building Systems, American Buildings Company, Kirby Building Systems and CBC Steel Buildings. In total, the Nucor Buildings group currently has an annual capacity of approximately 360,000 tons.

The sizes of the buildings that can be produced range from less than 1,000 square feet to more than 1,000,000 square feet. Complete metal building packages can be customized and combined with other materials such as glass, wood and masonry to produce cost-effective, energy efficient, aesthetically pleasing buildings designed to the customers' special requirements. The buildings are sold primarily through independent builder distribution networks in order to provide fast-track, customized solutions for building owners. The primary markets served are commercial, industrial and institutional buildings, including distribution centers, data centers, automobile dealerships, retail centers, schools and manufacturing facilities.

INSULATED METAL PANELS

In August 2021, Nucor purchased the assets of the insulated metal panels business ("IMP") of Cornerstone Building Brands, Inc., which is comprised of two industry leading brands, CENTRIA and Metl-Span. This acquisition, combined with Nucor's existing IMP business, TrueCore, LLC ("TrueCore"), form the Nucor Insulated Panel Group. The Nucor Insulated Panel Group has nine manufacturing locations and has an annual capacity of approximately 92,000 tons.

STEEL MESH, GRATING AND FASTENERS

Nucor produces mesh at Nucor Steel Connecticut, Inc. and Nucor Wire Products Utah. Nucor also produces mesh in Canada at the Harris operations of Laurel Steel. The combined annual production capacity of the steel mesh facilities is approximately 128,000 tons.

Our grating business manufactures and fabricates steel and aluminum bar grating products at facilities located in North America and serves the new construction and maintenance-related markets. The annual production capacity for our grating business is approximately 46,500 tons.

Nucor Fastener's bolt-making facility in Indiana produces carbon and alloy steel hex head cap screws, hex bolts, structural bolts, nuts and washers, finished hex nuts and custom-engineered fasteners. Nucor fasteners are used in a broad range of markets, including automotive, machine tool, farm implement, construction and military applications. The annual production capacity of this facility is approximately 75,000 tons.

In the raw materials segment, Nucor produces DRI; brokers ferrous and nonferrous metals, pig iron, HBI and DRI; supplies ferro-alloys; and processes ferrous and nonferrous scrap metal. The raw materials segment also includes our natural gas drilling operations. Nucor's raw materials investments are focused on creating an advantage for its steelmaking operations, through a global information network and a multi-pronged and flexible approach to metallics supply.

SCRAP RECYCLING AND BROKERAGE OPERATIONS

The David J. Joseph Company ("DJJ") operates six regional scrap recycling companies across the United States that together have shredders capable of processing approximately 5,478,000 tons of ferrous scrap annually. DJJ's scrap recycling operations use industry-leading expertise and technology to maximize metal recovery and minimize waste. DJJ also operates 12 self-serve used auto parts stores called U Pull-&-Pay that complement its recycling operations.

DJJ is the leading broker of ferrous scrap in North America and is a global trader of scrap metal, pig iron and other metallics. In addition to sourcing steel scrap for Nucor's mills, DJJ is a global trader of ferroalloys and nonferrous metals. DJJ's logistics team owns and operates one of the largest independent fleets of railcars in the United States dedicated to the movement of scrap and steel and also offers railcar leasing and railcar fleet management services. These activities have strategic value to Nucor as the leading and most diversified North American steel producer.

Our primary external customers for ferrous scrap are EAF steel mills and foundries that use ferrous scrap as a raw material in their manufacturing process. External customers purchasing nonferrous scrap metal include aluminum can producers, secondary aluminum smelters, steel mills, and other processors and consumers of various nonferrous metals. We market scrap metal products and related services to our external customers through in-house sales

OPERATIONS REVIEW 21

forces. In 2021, approximately 9% of the ferrous and nonferrous metals and scrap substitute tons we brokered and processed were sold to external customers. We consumed the balance in our steel mills.

DIRECTED REDUCED IRON OPERATIONS

DRI is a substitute material for high-quality grades of scrap and pig iron. Nucor operates two DRI plants with a combined annual capacity of approximately 4,500,000 metric tons of material with world-class metallization rates and carbon content. Nucor's wholly owned subsidiary, Nu-Iron Unlimited, is in Trinidad and benefits from a low-cost supply of natural gas and favorable logistics for inbound iron ore and shipment of DRI to the United States. Nucor's second DRI plant in Louisiana also benefits from favorable logistics and proximity to its steel mill customers.

Nucor's DRI production and brokering capabilities provide our steel mills flexibility

to quickly adjust their metallic input mix to changing market conditions, enabling them to maintain cost competitiveness in the oftenvolatile ferrous scrap market. With the potential for high-quality scrap to become scarcer, coupled with the risk of third-party supplier disruptions, Nucor's DRI facilities provide a greater degree of certainty over metallics supply to its steel mills.

NATURAL GAS DRILLING PROGRAMS

Nucor owns leasehold interests in natural gas properties in the Piceance Basin in the Western Slope of Colorado.

Nucor's access to a long-term, low-cost supply of natural gas is a component in the execution of Nucor's raw material strategy. Natural gas produced by Nucor's drilling operations is being sold to third parties to partially offset our exposure to changes in the price of natural gas consumed by our DRI plant in Louisiana and our steel mills in the United States.

UNIVERSAL INDUSTRIAL GASES (UIG)

Nucor acquired UIG in 2019 so that we have the capability to build and operate our own air separation units ("ASU") to serve our steel mills, providing us with an alternative to long term service contracts with outside providers. Where economies of scale and regional market conditions warrant, we can also sell excess output from these plants on a merchant basis. We have one ASU in operation at our plate mill in Hertford County, North Carolina and three additional stand-alone facilities that are currently operating. Three more facilities are currently under construction at Nucor facilities.

ANNUAL MEETING

The 2022 annual meeting of stockholders will be held at 10:00 a.m., Eastern Time, on Thursday, May 12, 2022. To participate in the annual meeting, visit www.virtualshareholdermeeting.com/NUE2022.

STOCK LISTING

Nucor's common stock is traded on the New York Stock Exchange under the symbol NUE. As of January 31, 2022, there were approximately 13,000 stockholders of record.

FORM 10-K

A copy of Nucor's 2021 Annual Report on Form 10-K filed with the Securities and Exchange Commission ("SEC") is available to stockholders without charge upon request to A. Rae Eagle, Vice President and Corporate Secretary, at Nucor's corporate office.

INTERNET ACCESS

Nucor's Annual Report on Form 10-K, Quarterly Reports on Form 10-Q, current reports on Form 8-K and any amendments to these reports, as well as proxy statements and other information, are on Nucor's website, www.nucor.com, as soon as reasonably practicable after Nucor files these documents electronically with, or furnishes them to, the SEC. Additional information available on our website includes our Corporate Governance Principles, Board of Directors Committee Charters, Standards of Business Conduct and Ethics and Code of Ethics for Senior Financial Professionals as well as various other financial and statistical data.

STOCK PERFORMANCE

This graphic comparison assumes the investment of \$100 in each Nucor Corporation common stock, the S&P 500 Index and the S&P 1500 Steel Group Index, all at year-end 2016. The resulting cumulative total return assumes that cash dividends were reinvested. Nucor common stock comprised 39% of the S&P 1500 Steel Group Index at year-end 2021 (36% at year-end 2016).

PART I

Item 1. Business

Overview

Nucor Corporation, a Delaware corporation incorporated in 1958, and its affiliates ("Nucor," the "Company," "we," "us" or "our") manufacture steel and steel products. The Company also produces direct reduced iron ("DRI") for use in its steel mills. Through The David J. Joseph Company and its affiliates ("DJJ"), the Company also processes ferrous and nonferrous metals and brokers ferrous and nonferrous metals, pig iron, hot briquetted iron ("HBI") and DRI. Most of the Company's operating facilities and customers are located in North America. The Company's operations include international trading and sales companies that buy and sell steel and steel products manufactured by the Company and others.

Nucor is North America's largest recycler, using scrap steel as the primary raw material in producing steel and steel products. In 2021, we recycled approximately 20.4 million gross tons of scrap steel.

Segments, Principal Products Produced, and Markets and Marketing

Nucor reports its results in three segments: steel mills, steel products and raw materials. The steel mills segment is Nucor's largest segment, representing 66% of the Company's sales to external customers in the year ended December 31, 2021.

We market products from the steel mills and steel products segments mainly through in-house sales forces. We also utilize our internal distribution and trading companies to market our products abroad. The markets for these products are largely tied to capital and durable goods spending and are affected by changes in general economic conditions.

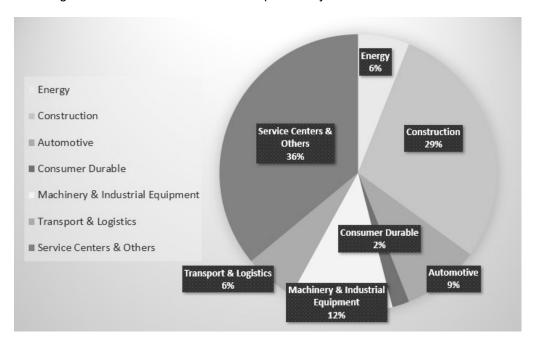

We are a leading domestic provider for most of the products we supply, and, in many cases (e.g., structural steel, merchant bar steel, steel joist and deck, pre-engineered metal buildings, steel piling, cold finish bar steel, steel electrical conduit pipe and insulated metal panels), we are the leading supplier.

Steel mills segment

In the steel mills segment, Nucor produces sheet steel (hot-rolled, cold-rolled and galvanized), plate steel, structural steel (wide-flange beams, beam blanks, H-piling and sheet piling) and bar steel (blooms, billets, concrete reinforcing bar, merchant bar and engineered special bar quality ("SBQ")). Nucor manufactures steel principally from scrap steel and scrap steel substitutes using electric arc furnaces ("EAFs"), continuous casting and automated rolling mills. The steel mills segment also includes Nucor's equity method investments in NuMit LLC ("NuMit") and Nucor-JFE Steel Mexico, S. de R.L. de C.V. ("Nucor-JFE"), as well as international trading and distribution companies that buy and sell steel manufactured by the Company and other steel producers.

The steel mills segment sells its products primarily to steel service centers, fabricators and manufacturers located throughout the United States, Canada and Mexico. The steel mills segment sold approximately 20,296,000 tons to outside customers in 2021.

The following chart shows our outside steel shipments by end market:

In 2021, 79% of the shipments made by our steel mills segment were to external customers. The remaining 21% of the steel mills segment's shipments went to our steel products segment.

Bar mills - Nucor has 15 bar mills strategically located across the United States that
manufacture a broad range of steel products, including concrete reinforcing bars, hot-rolled
bars, rounds, light shapes, structural angles, channels, wire rod and highway products in carbon
and alloy steels. Four of the bar mills have a significant focus on manufacturing SBQ and wire
rod products.

Steel produced by our bar mills has a wide usage serving end markets, including the agricultural, automotive, construction, energy, furniture, machinery, metal building, railroad, recreational equipment, shipbuilding, heavy truck and trailer market segments. Considering Nucor's production capabilities and the mix of bar products generally produced and marketed, the capacity of the bar mills is estimated at approximately 9,560,000 tons per year.

Reinforcing and merchant bar steel are sold in standard sizes and grades, which allows us to maintain inventory levels of these products to meet our customers' expected orders. Our SBQ products are hot-rolled to exacting specifications primarily servicing the automotive, energy, agricultural, heavy equipment and transportation sectors.

In December 2021, Nucor announced that it expects to build a rebar micro mill at a to-bedetermined location in the South Atlantic region.

Sheet mills - Nucor operates five strategically located sheet mills that utilize thin slab casters to
produce flat-rolled steel for automotive, appliance, construction, pipe and tube and many other
industrial and consumer applications. Considering Nucor's production capabilities and the mix of
flat-rolled products generally produced and marketed, the capacity of the sheet mills is
estimated at approximately 11,300,000 tons per year. All of our sheet mills are equipped with
galvanizing lines and four of them are equipped with cold rolling mills for the further processing
of hot-rolled sheet steel.

Nucor produces hot-rolled, cold-rolled and galvanized sheet steel to customers' specifications. Contract sales within the steel mills segment are most notable in our sheet operations, as it is common for contract sales to account for the majority of sheet sales in a given year. We estimate that greater than 80% of our sheet steel sales in 2021 were to contract customers. The balance of our sheet steel sales were made in the spot market at prevailing prices at the time of sale. The amount of tons sold to contract customers at any given time depends on a variety of factors, including our consideration of current and future market conditions, our strategy to appropriately balance spot and contract tons in a manner to meet our customers' requirements while considering the expected profitability, our desire to sustain a diversified customer base, and our end-use customers' perceptions about future market conditions. These sheet sales contracts are noncancellable agreements that generally incorporate monthly or quarterly price adjustments reflecting changes in the current market-based indices and/or raw material cost, and typically have terms ranging from six to 12 months.

In January 2022, Nucor announced that it expects to build a new, state-of-the-art sheet mill in West Virginia. In February 2022, Nucor completed its acquisition of a majority ownership position in California Steel Industries, Inc. ("CSI"), a flat-rolled steel converter, based in Fontana, California, expanding the reach of Nucor's sheet mill group to the west coast of the United States.

• Structural mills - Nucor operates two structural mills that produce wide-flange steel beams, pilings and heavy structural steel products for fabricators, construction companies, manufacturers and steel service centers. Nucor owns a 51% interest in Nucor-Yamato Steel Company (Limited Partnership) ("Nucor-Yamato") located in Blytheville, Arkansas. Nucor-Yamato is the only North American producer of high-strength, low-alloy beams. Common applications for the high-strength, low-alloy beams include gravity columns for high-rise buildings, long-span trusses for stadiums and convention centers, and for all projects where seismic design is a critical factor. The benefits of high strength, low alloy beams are increasingly recognized by Nucor's customers in the construction sector. These include savings in terms of construction time, weight, space, and overall environmental impact. Nucor sells its high-strength, low alloy beams under the trade name AEOS™.

Nucor also owns a steel beam mill in Berkeley County, South Carolina. Considering Nucor's production capabilities and the mix of structural products generally produced and marketed, the capacity of the two structural mills is estimated at approximately 3,250,000 tons per year. Both mills use a special continuous casting method that produces a beam blank closer in shape to that of the finished beam than traditional methods.

Structural steel products come in standard sizes and grades, which allows us to maintain inventory levels of these products to meet our customers' expected orders.

Plate mills - Nucor operates three plate mills that produce plate for manufacturers of barges, bridges, heavy equipment, rail cars, refinery tanks, ships, wind towers and other items. Our products are further used in the pipe and tube, pressure vessel, transportation and construction industries. Considering Nucor's production capabilities and the mix of plate products generally produced and marketed, the capacity of the plate mills is estimated at approximately 2,925,000 tons per year. Nucor is currently constructing a state-of-the-art plate mill in Brandenburg, Kentucky with an anticipated start-up date of late 2022.

Plate steel products come in standard sizes and grades, which allows us to maintain inventory levels of these products to meet our customers' expected orders.

• Steel joint ventures - Nucor owns 50% interests in a North American sheet steel processing joint venture and a galvanized sheet steel plant in Mexico.

Nucor owns a 50% economic and voting interest in NuMit, a company that owns 100% of the equity interest in Steel Technologies LLC ("Steel Technologies"), an operator of 30 strategically located sheet processing facilities in the United States, Canada and Mexico. Steel Technologies transforms flat-rolled steel into products that meet the exact specifications for customers in a wide range of industries, including the automotive, agricultural and consumer goods markets.

Nucor owns a 50% economic and voting interest in Nucor-JFE, a joint venture with JFE Steel Corporation ("JFE") of Japan that operates a galvanized sheet steel plant in central Mexico that is expected to supply the country's automotive market with an annual capacity of approximately 400,000 tons.

Steel products segment

In the steel products segment, Nucor produces hollow structural section ("HSS") steel tubing, electrical conduit, steel racking, steel joists and joist girders, steel deck, fabricated concrete reinforcing steel, cold finished steel, steel fasteners, metal building systems, insulated metal panels, steel grating and expanded metal, and wire and wire mesh. The steel products segment also includes our piling distributor. These products are sold primarily for use in nonresidential construction applications.

• Tubular Products – The Nucor Tubular Products ("NTP") group has eight tubular facilities that are strategically located in close proximity to Nucor's sheet mills as they are a consumer of hot-rolled coil. The NTP group produces HSS steel tubing, mechanical steel tubing, galvanized solar torque tube, piling, sprinkler pipe, heat-treated tubing and electrical conduit. HSS steel tubing, mechanical steel tubing and sprinkler pipe are used in structural and mechanical applications, including nonresidential construction, infrastructure, agricultural, automotive and construction equipment end-use markets. Heat-treated tubing and electrical conduit are primarily used to protect and route electrical wiring in various nonresidential structures such as hospitals, schools, office buildings, hotels, stadiums and shopping malls. Solar torque tube is an essential component for ground-mount solar systems.

In August 2021, Nucor acquired Hannibal Industries, Inc. (Hannibal), a leading national provider of steel racking solutions. Total annual NTP capacity is approximately 1,500,000 tons. In March 2021, Nucor announced that it expects to build a new tube mill on the site of its Kentucky sheet mill.

- Rebar fabrication Harris Steel ("Harris") fabricates, installs and distributes rebar for a wide
 variety of construction work classified as infrastructure (e.g., highways, bridges, reservoirs,
 utilities and airports) and various building projects, including hospitals, schools, stadiums,
 commercial office buildings and multi-tenant residential construction. We sell and install
 fabricated reinforcing products primarily on a construction contract bid basis.
 - Reinforcing products are essential to concrete construction. They supply tensile strength, as well as additional compressive strength, and protect the concrete from cracking. In many markets, Harris sells reinforcing products on an installed basis (i.e., Harris fabricates the reinforcing products for a specific application and performs the installation). Harris operates nearly 70 fabrication facilities across the United States and Canada, with each facility serving a local market. Total annual rebar fabrication capacity is approximately 1,686,000 tons.
- Vulcraft/Verco The Vulcraft/Verco group is the nation's largest producer and leading innovator of open-web steel joists, joist girders and steel decking, which are used primarily for nonresidential building construction. Steel joists and joist girders are produced and marketed throughout the United States by seven domestic Vulcraft facilities. The Vulcraft/Verco group's steel decking is produced and marketed throughout the United States by nine domestic plants. Six of these plants are adjacent to Vulcraft joist facilities. The Vulcraft/Verco group also has two plants in Canada, one in Eastern Canada and one in Western Canada, that produce both joist and deck. The annual joist production capacity is approximately 745,000 tons and the annual deck production capacity is approximately 560,000 tons.

Sales of steel joists, joist girders and steel decking are dependent on the nonresidential building construction market. The majority of steel joists, joist girders and steel decking are used extensively as part of the roof and floor structural support systems in warehouses, data centers, manufacturing buildings, retail stores, shopping centers, schools, hospitals, and, to a lesser extent, in multi-story buildings and apartments. We make these products to the customers' specifications and do not sell these finished steel products out of inventory. The majority of these contracts are firm, fixed-price contracts that are, in most cases, competitively bid against other suppliers.

- Piling products Skyline Steel LLC and its subsidiaries ("Skyline") are primarily a steel
 foundation distributor serving the North American market. Skyline distributes products to service
 marine construction, bridge and highway construction, heavy civil construction, storm protection,
 underground commercial parking and environmental containment projects in the infrastructure
 and construction industries. Skyline also manufactures a complete line of geostructural
 foundation solutions, including threaded bar, micropile, strand anchors and hollow bar. It also
 processes and fabricates spiral weld pipe piling, rolled and welded pipe piling, cold-formed
 sheet piling and threaded bar.
- Cold finish Nucor Cold Finish ("NCF") is the largest and most diversified producer of cold finished bar products for a wide range of industrial markets in North America, with assets in Canada, Mexico and throughout the United States. The total capacity of the Nucor cold finished bar and wire facilities exceeds approximately 1,069,000 tons per year.

Nucor's cold finished facilities are among the most modern in the world, producing cold finished bars for the most demanding applications. NCF obtains most of its steel from the Nucor bar mills, ensuring consistent quality and supply through all market conditions. These facilities produce cold-drawn, turned, ground and polished steel bars that are used extensively for shafting and other precision machined applications. NCF produces rounds, hexagons, flats and squares in carbon, alloy and leaded steels. These bars are purchased by the appliance, automotive, construction equipment, electric motor, farm machinery and fluid power industries, as well as by service centers. NCF bars are used in tens of thousands of products. A few examples include anchor bolts, hydraulic cylinders and shafting for air conditioner compressors, ceiling fan motors, garage door openers, electric motors and lawn mowers.

Nucor owns a fully integrated precision castings company, Corporacion POK, S.A. de C.V. ("POK"), with a facility in Guadalajara, Mexico. POK produces complex castings and precision machined products used by the oil and gas, mining and sugar processing industries. POK produces a wide array of precision castings using steel, bronze, iron and specialty exotic alloys. POK complements NCF's businesses and Nucor's cold finish facility in Monterrey.

 Buildings group – Nucor produces metal buildings and components throughout the United States under the following brands: Nucor Building Systems, American Buildings Company, Kirby Building Systems and CBC Steel Buildings. In total, the Nucor Buildings group currently has an annual capacity of approximately 360,000 tons.

The sizes of the buildings that can be produced range from less than 1,000 square feet to more than 1,000,000 square feet. Complete metal building packages can be customized and combined with other materials such as glass, wood and masonry to produce cost-effective, energy efficient, aesthetically pleasing buildings designed to the customers' special requirements. The buildings are sold primarily through independent builder distribution networks in order to provide fast-track, customized solutions for building owners. The primary markets served are commercial, industrial and institutional buildings, including distribution centers, data centers, automobile dealerships, retail centers, schools and manufacturing facilities.

- Insulated Metal Panels In August 2021, Nucor purchased the assets of the insulated metal panels business ("IMP") of Cornerstone Building Brands, Inc. ("Cornerstone"), which is comprised of two industry leading brands, CENTRIA and Metl-Span. This acquisition, combined with Nucor's existing IMP business, TrueCore, LLC ("TrueCore"), form the Nucor Insulated Panel Group. The Nucor Insulated Panel group has nine manufacturing locations and has an annual capacity of approximately 92,000 tons.
- Steel mesh, grating and fasteners Nucor manufactures wire products, grating and industrial fasteners.

Nucor produces mesh at Nucor Steel Connecticut, Inc. and Nucor Wire Products Utah. Nucor also produces mesh in Canada at the Harris operations of Laurel Steel. The combined annual production capacity of the steel mesh facilities is approximately 128,000 tons.

Our grating business manufactures and fabricates steel and aluminum bar grating products at facilities located in North America and serves the new construction and maintenance-related markets. The annual production capacity for our grating business is approximately 46,500 tons.

Nucor Fastener's bolt-making facility in Indiana produces carbon and alloy steel hex head cap screws, hex bolts, structural bolts, nuts and washers, finished hex nuts and custom-engineered fasteners. Nucor fasteners are used in a broad range of markets, including automotive, machine tool, farm implement, construction and military applications. The annual production capacity of this facility is approximately 75,000 tons.

Raw materials segment

In the raw materials segment, Nucor produces DRI; brokers ferrous and nonferrous metals, pig iron, HBI and DRI; supplies ferro-alloys; and processes ferrous and nonferrous scrap metal. The raw materials segment also includes our natural gas drilling operations. Nucor's raw materials investments are focused on creating an advantage for its steelmaking operations, through a global information network and a multi-pronged and flexible approach to metallics supply.

Scrap recycling and brokerage operations - DJJ operates six regional scrap recycling
companies across the United States that together have shredders capable of processing
approximately 5,478,000 tons of ferrous scrap annually. DJJ's scrap recycling operations use
industry-leading expertise and technology to maximize metal recovery and minimize waste. DJJ
also operates 12 self-serve used auto parts stores called U Pull-&-Pay that complement its
recycling operations.

DJJ is the leading broker of ferrous scrap in North America and is a global trader of scrap metal, pig iron and other metallics. In addition to sourcing steel scrap for Nucor's mills, DJJ is a global trader of ferro-alloys and nonferrous metals. DJJ's logistics team owns and operates one of the largest independent fleets of railcars in the United States dedicated to the movement of scrap and steel and also offers railcar leasing and railcar fleet management services. These activities have strategic value to Nucor as the leading and most diversified North American steel producer.

Our primary external customers for ferrous scrap are EAF steel mills and foundries that use ferrous scrap as a raw material in their manufacturing process. External customers purchasing nonferrous scrap metal include aluminum can producers, secondary aluminum smelters, steel mills, and other processors and consumers of various nonferrous metals. We market scrap metal products and related services to our external customers through in-house sales forces. In 2021, approximately 9% of the ferrous and nonferrous metals and scrap substitute tons we brokered and processed were sold to external customers. We consumed the balance in our steel mills.

- Direct reduced iron operations DRI is a substitute material for high-quality grades of scrap and
 pig iron. Nucor operates two DRI plants with a combined annual capacity of approximately
 4,500,000 metric tons of material with world-class metallization rates and carbon content.
 Nucor's wholly owned subsidiary, Nu-Iron Unlimited, is in Trinidad and benefits from a low-cost
 supply of natural gas and favorable logistics for inbound iron ore and shipment of DRI to the
 United States. Nucor's second DRI plant in Louisiana also benefits from favorable logistics and
 proximity to its steel mill customers.
 - Nucor's DRI production and brokering capabilities provide our steel mills flexibility to quickly adjust their metallic input mix to changing market conditions, enabling them to maintain cost competitiveness in the often-volatile ferrous scrap market. With the potential for high-quality scrap to become scarcer, coupled with the risk of third-party supplier disruptions, Nucor's DRI facilities provide a greater degree of certainty over metallics supply to its steel mills.
- Natural gas drilling programs Nucor owns leasehold interests in natural gas properties in the Piceance Basin in the Western Slope of Colorado.
 - Nucor's access to a long-term, low-cost supply of natural gas is a component in the execution of Nucor's raw material strategy. Natural gas produced by Nucor's drilling operations is being sold to third parties to partially offset our exposure to changes in the price of natural gas consumed by our DRI plant in Louisiana and our steel mills in the United States.
- Universal Industrial Gases (UIG) Nucor acquired UIG in 2019 so that we would have the
 capability to build and operate our own air separation units ("ASU") to serve our steel mills,
 providing us with an alternative to long term service contracts with outside providers. Where
 economies of scale and regional market conditions warrant, we can also sell excess output from
 these plants on a merchant basis. We have one ASU in operation at our plate mill in Hertford
 County, North Carolina and three additional stand-alone facilities that are currently operating.
 Three more facilities are currently under construction at Nucor facilities.

Customers and Markets

We have a diverse customer base and are not dependent on any single customer. Our largest single customer in 2021 represented approximately 5% of sales and consistently pays within terms. Our steel mills use a significant portion of the products of the raw materials segment.

We believe that nonresidential construction is the largest end-use market that we serve. Products from our steel mills and steel products segment are used in a variety of nonresidential construction applications (e.g., commercial, industrial, infrastructure).

In recent years we have come to see our EAF-based steelmaking method, with its lower greenhouse gas ("GHG") intensity when compared with blast furnace technology, as a competitive advantage for reasons beyond its flexible, highly variable cost base. Many of our customers are expressing greater concern for the GHG emissions in their supply chains and are prioritizing sourcing their steel requirements from EAF-based steelmakers for incorporation into their projects and products.

We have developed branded product lines to leverage this, and other advantages conferred by our specialized capabilities.

- Our AEOSTM line of high strength, low alloy steel beams is one such example. AEOSTM's
 benefits are increasingly recognized by Nucor's customers in the construction sector.
 These include savings in terms of construction time, weight, space and overall
 environmental impact.
- Our ECONIQ[™] line of net zero carbon steel is another example. We launched ECONIQ[™] during 2021 and have found strong interest from customers in both the automotive and construction end-use markets. These are the two largest end-use markets for steel in the United States.

We have also invested in people and processes to organize more of our commercial activities around large customers and end-use markets (e.g., automotive, construction, wind energy and solar energy). We have developed dedicated teams who are tasked with developing relationships and educating decision makers in these sectors. We believe this has resulted in earlier and more thoughtful consideration being given to steel-based solutions from Nucor, and a better appreciation for some our unique products and capabilities, such as AEOSTM and ECONIQTM.

General Development of Our Business in Recent Years

Nucor has invested significant capital in recent years to expand our product portfolio to include more value-added steel mill products and capabilities, improve our cost structure, enhance our operational flexibility and increase our exposure to markets with attractive growth prospects; such as datacenters, warehouses and renewable energy. These investments totaled approximately \$6.34 billion over the last three years, with approximately 75% going to capital expenditures and the remainder going to acquisitions. We believe that these investments will help us deliver profitable long-term growth. Further, we believe shifting our product mix to a greater proportion of value-added products will make us less susceptible to being negatively impacted by imports.

Nucor has several new capital projects and an acquisition of majority ownership position a joint venture in the steel mills segment that support our expansion of value-added product offerings and cost-reduction strategies.

- Nucor has completed construction of a new \$325 million third generation flexible galvanizing line
 with an annual capacity of approximately 500,000 tons at our Nucor Steel Arkansas facility. We
 believe this project, combined with Nucor Steel Arkansas' specialty cold mill that has been in
 operation for more than two years, uniquely positions Nucor among North American EAF
 steelmakers to provide the high-strength, light-weight steels that are increasingly in demand from
 the automotive and other sectors.
- Nucor has completed construction of its approximately \$650 million investment to modernize and expand the production capability at its Gallatin flat-rolled sheet mill located in Ghent, Kentucky. The project is expected to begin start-up in the first quarter of 2022 and will increase the production capability of the mill from approximately 1,400,000 tons to approximately 3,000,000 tons annually once fully online. This project gives the Gallatin mill new, thicker slab casting and wider coil capabilities, expanding our product portfolio into markets currently served by higher-cost competitors.
- Construction continues on our \$1.70 billion state-of-the-art plate mill in Brandenburg, Kentucky on the Ohio river. We expect that the new plate mill will begin production in the fourth quarter of 2022. The mill will be capable of producing approximately 1,200,000 tons per year of steel plate products. With the capability to manufacture nearly all the different types of plate products consumed in the United States, we believe this mill will position Nucor as the supplier of choice in the domestic plate market. We expect domestic demand for steel plate to grow in the coming years as offshore wind farms are permitted and developed with increasing frequency. Steel plate is essential to constructing offshore wind towers, as is steel rebar.

• In January 2022, Nucor announced that its new state-of-the-art sheet mill will be located in Mason County, West Virginia. Nucor's West Virginia mill will have an annual capacity of 3,000,000 tons, with related total expected capital expenditures of approximately \$2.70 billion. Construction is expected to take two years pending permit and regulatory approvals.

The new mill will be equipped to produce 84-inch sheet products, and among other features, will include a 76-inch tandem cold mill and two galvanizing lines. Galvanizing capabilities will include an advanced high-end automotive line with full inspection capabilities as well as a construction-grade line. In addition to its advanced capabilities and strategic location, the new greenfield mill's product mix is anticipated to have a significantly lower GHG intensity than competitors who have historically supplied the region.

• In December 2021, Nucor announced construction of a rebar micro mill, with spooling capabilities, which is expected to be located in the South Atlantic region. This would be Nucor's third rebar micro mill, joining its existing micro mills in Missouri and Florida, both of which began operations in 2020. This \$350 million investment will have an annual capacity of approximately 430,000 tons and is expected to be in operation in 2023.

These mills are referred to as micro mills because they have a smaller operational footprint than our older rebar mills, as well as less productive capacity – typically about 400,000 tons per year. This makes them suitable for smaller regional markets and enables to us serve these markets with a logistics cost advantage relative to competitors operating from further away. Micro mills also have a lower environmental footprint due to their smaller size and the fact that their plant design does not typically include a natural gas fired reheat furnace that is common in many steel mills.

 In February 2022, Nucor completed its acquisition of a majority ownership position in CSI by purchasing a 50% equity ownership interest from a subsidiary of Vale S.A. (Vale) for a cash purchase price of \$400 million, adjusted for net debt and working capital at closing, as well as a 1% equity ownership stake from JFE. CSI is a flat-rolled steel converter based in Fontana, California.

Our acquisition of CSI expands the reach of Nucor's sheet mill group to the west coast of the United States and increases our exposure to more value-added sheet steel. CSI's product capabilities include hot rolled, pickled & oiled, cold rolled and galvanized sheet steels, as well as electric resistance welded (ERW) pipe. Its annual capacity is estimated at more than 2,000,000 tons.

During 2021, Nucor made two strategic acquisitions in the steel products segment.

 In August 2021, Nucor acquired the assets of the IMP business of Cornerstone for a cash purchase price of approximately \$1.00 billion. The acquired IMP business that we acquired is comprised of two industry leading brands, CENTRIA and Metl-Span. The brands are now part of the Nucor Insulated Panel group, which also includes the Company's initial IMP business, TrueCore.

We believe this acquisition will broaden the value-added solutions that the Nucor Buildings group provides to targeted end markets such as warehousing, distribution and data centers. We expect these end-use markets to continue to grow in the coming years and that the use of IMP products within them will also increase. IMPs facilitate cost-effective climate control in the built environment and reduce energy usage and overall operations-related GHG emissions for owners and lessees.

• In August 2021, Nucor acquired Hannibal for \$370 million. Hannibal is a leading national provider of racking solutions to warehouses and serves the e-commerce, industrial, food storage and retail segments. Hannibal has manufacturing facilities in Los Angeles and Houston, as well as three distribution centers. It utilizes sheet and bar steel, as well as steel decking, wire deck and fasteners to produce its racking solutions, providing potential supply chain efficiencies with other Nucor businesses. In addition to manufacturing racking solutions, Hannibal works closely with customers during the construction and design phases of a warehouse build-out by offering turn-key services such as installation, procurement and facility integration.

Capital Allocation Strategy

The significant developments in Nucor's business in recent years have largely been driven by our capital allocation strategy. Our highest capital allocation priority is to invest in our business for profitable long-term growth through our multi-pronged strategy of optimizing existing operations, greenfield expansions and acquisitions.

Our second priority is to return capital to our stockholders through cash dividends and share repurchases. Nucor has paid \$1.47 billion in dividends to its stockholders during the past three years. That dividend payout represents 13% of cash flows from operations during that three-year period. The Company repurchased \$3.28 billion of its common stock in 2021 (\$39.5 million in 2020 and \$298.5 million in 2019).

We intend to return at least 40% of our net income to stockholders over time via a combination of both cash dividends and share repurchases. Over the past three years, we have returned approximately 58% of our net income in this manner. At December 31, 2021, the Company had approximately \$3.85 billion available for share repurchases under the currently authorized share repurchase program.

We intend to execute on our capital allocation strategy while maintaining a strong balance sheet, with relatively low financial leverage, as measured in terms of net debt to total capital, as well as ample liquidity. At year-end 2021, our net debt to total capital was approximately 14% and we had cash and cash equivalents, short-term investments and restricted cash and cash equivalents on hand of \$2.76 billion. At the end of 2021, Nucor had the strongest credit ratings in the North American steel sector (Baa1/A-) with stable outlooks at both Moody's and Standard & Poor's.

Competition

We compete in a variety of steel and metal markets, including markets for finished steel products, unfinished steel products and raw materials. These markets are highly competitive with many domestic and foreign firms participating, and, as a result of this highly competitive environment, we find that we primarily compete on price and service.

In our steel mills segment, our EAF steel mills face many different forms of competition, including domestic integrated steel producers (who use iron ore converted into liquid form in a blast furnace as their basic raw material instead of scrap steel), other domestic EAF steel mills, steel imports and alternative materials. Large domestic integrated steel producers have the ability to manufacture a variety of products but face significantly higher energy costs and are often burdened with higher capital and fixed operating costs. EAF-based steel producers, such as Nucor, are sensitive to increases in scrap prices but tend to have lower capital and fixed operating costs compared with large integrated steel producers. EAF-based steel producers also typically emit fewer GHGs per ton of steel produced than integrated steel producers.

Global steel production overcapacity continues to be an ongoing risk to Nucor and the entire steel industry. The Organisation for Economic Cooperation and Development ("OECD") estimates that global steel production overcapacity is currently approximately 500,000,000 tons, which is down slightly from previous years. However, additional capacity continues to come online and China's steel production, the largest steel producing country, is still near record levels. In 2021, China's steel production was 1.13 billion tons compared to the record amount of 1.16 billion tons the previous year.

Circumvention of trade duties also continues to pose a risk. Besides producing record amounts of steel in its own country, China is investing heavily in steel production in neighboring countries which is one way it tries to avoid being subject to trade duties. State-owned Chinese steel companies are involved in new steel capacity projects in Indonesia, the Philippines and Malaysia. The South East Asia Iron and Steel Institute (SEAISI) has estimated that by 2026 there will be significant production overcapacity in the region, noting it will take 20 years for demand to catch up with the projected capacity levels.

Strong trade enforcement has led to a structural change in the U.S. steel market. The Section 232 steel tariffs and successful trade cases have been effective in keeping unfairly traded imports out of the U.S. market. In November 2021, the U.S. government reached an agreement with Europe to end the Section 232 imports on steel from the European Union and replace them with a tariff rate quota. The U.S. government is also negotiating potential deals to end the tariffs with the United Kingdom and Japan. Imports of finished steel in 2021 were up approximately 48% from 2020 levels and accounted for approximately 22% of U.S. market share.

At the end of 2021, Congress passed a significant infrastructure spending bill. The bill will result in an estimated 4 million to 6 million tons of additional steel demand per year, and contains strong Buy America requirements to ensure domestically produced steel is used to rebuild U.S. infrastructure. Approximately 50% of Nucor products are shipped into the construction market, and Nucor's lower carbon footprint is expected to provide an additional advantage as states and localities look to rebuild infrastructure in a sustainable manner.

We also experience competition from other materials. Depending on our customers' end use of our products, there are often other materials, such as concrete, aluminum, plastics, composites and wood that compete with our steel products. When the price of steel relative to other raw materials rises, these alternatives can become more attractive to our customers.

Competition in our scrap and raw materials business is also vigorous. The scrap metals market consists of many firms and is highly fragmented. Firms typically compete on price and geographic proximity to the sources of scrap metal.

Backlog

In the steel mills segment, Nucor's backlog of orders was approximately \$3.79 billion and \$2.58 billion at December 31, 2021 and 2020, respectively. Order backlog for the steel mills segment includes only orders from external customers and excludes orders from other Nucor businesses. Nucor's backlog of orders in the steel products segment was approximately \$8.12 billion and \$2.66 billion at December 31, 2021 and 2020, respectively. The increase in backlogs for the steel products segment is due to several businesses within the steel products segment having record backlog volume and pricing at December 31, 2021. The majority of these orders are expected to be filled within one year. Order backlog within our raw materials segment is not meaningful because the vast majority of the raw materials that segment produces are used internally.

Sources and Availability of Raw Materials

An ample supply of high-quality scrap and scrap substitutes is critical to support Nucor's ability to produce high-quality steel. Nucor's raw materials segment safely produces, sources, trades and transports steelmaking raw materials. Nucor's raw materials investments are focused on creating an advantage for our steelmaking operations, through a global information network and a multi-pronged and flexible approach to metallics supply.

Scrap and scrap substitutes are the most significant element in the total cost of steel production. The average cost of scrap and scrap substitutes used in our steel mills segment increased 62% from \$290 per gross ton used in 2020 to \$469 per gross ton used in 2021. On average, it takes approximately 1.1 tons of scrap and scrap substitutes to produce one ton of steel. Depending on the market conditions at the time, a raw material surcharge or variable steel pricing mechanism may be implemented to assist Nucor in maintaining operating margins and in meeting our customer commitments during periods of rapidly changing scrap and scrap substitute costs.

For the past decade, Nucor has focused on securing access to low-cost raw material inputs as they are the Company's largest expense. We believe Nucor's broad, balanced supply chain is an important strength which allows us to reduce the cost of our steelmaking operations, create a shorter supply chain and have greater optionality over our metallic inputs. Our investment in DRI production facilities and scrap yards, as well as our access to international raw materials markets, provides Nucor with significant flexibility in optimizing our raw material costs. Additionally, having a significant portion of our raw materials supply under our control minimizes risk associated with the global sourcing of raw materials, particularly since a good deal of scrap substitutes comes from regions of the world that have historically experienced greater political turmoil, such as Ukraine, Russia and Brazil. We believe the continued successful implementation of our raw material strategy, including key investments in DRI production, as well as in the scrap brokerage and processing services performed by our team at DJJ, gives us greater control over our metallic inputs and thus helps us mitigate the risk of significant fluctuations in the availability and costs of critical inputs.

DJJ acquires ferrous scrap from numerous sources, including manufacturers of products made from steel, industrial plants, scrap dealers, peddlers, auto wreckers and demolition firms. We purchase pig iron as needed primarily from overseas sources including Russia, Ukraine and Brazil. We received over 2,800,000 gross tons of pig iron in 2021. Our DRI plants in Trinidad and Louisiana have respective annual production capacities of approximately 2,000,000 and 2,500,000 metric tons. The primary raw material for our DRI facilities is pelletized iron ore, which we purchase from various international suppliers.

The primary raw material for our steel products segment is steel produced by Nucor's steel mills.

Energy Consumption and Costs

Steel manufacturing is considered an energy-intensive, trade exposed industry. As a result, we continuously strive to make our operations in all three of our business segments more energy efficient. In addition, we proactively engage with suppliers, regulators and other energy industry participants to ensure the continued availability of reliable, low-cost sources of energy in various forms.

Our steel mills utilize EAFs for 100% of their steel production, with approximately 50% of their total energy consumed as electricity. The total energy consumed by Nucor also includes natural gas, oxygen and carbon raw material inputs. For the scrap melting process, electricity is the primary energy source, with natural gas combustion serving as the fuel for reheat furnaces and other pre-heating operations. Our DRI facilities in Trinidad and Louisiana are also large consumers of natural gas.

The availability and prices of electricity and natural gas are influenced today by many factors, including changes in supply and demand, the regulatory environment and pipeline/transmission infrastructure.

We use a variety of strategies to manage our exposure to price risk of natural gas, including cash flow hedges, as well as our owned natural gas drilling operations. In addition to the currently producing wells in the Piceance Basin, Nucor owns leasehold interests in natural gas properties in the South Piceance Basin, in the Western Slope of Colorado. To support Nucor's operating wells and potential future well developments on these properties, Nucor has entered into long-term agreements directly with third-party gathering and processing service providers. Natural gas produced by Nucor's drilling operations is being sold to partially offset our exposure to changes in the price of natural gas consumed by our DRI plant in Louisiana, and by our steel mills in the United States. Nucor has full discretion on its participation in all future drilling capital investments.

We closely monitor developments in public policy relating to energy production and consumption. We engage with policymakers to provide technical information that can inform policy decisions and avoid unintended adverse consequences of legislative and regulatory actions. We believe that a thoughtful approach to domestic energy policy can help ensure that steel and steel products manufactured in the United States remain competitive in the increasingly global marketplace.

Reducing Greenhouse Gas Emissions

GHG emissions by the energy sector have received an increasing amount of attention in recent years, as more people become concerned that these emissions are a significant contributor to climate change. This has led to increasing support for, and investment in, low or zero carbon energy generation technologies such as solar, wind and nuclear. As a result, the development of these technologies has accelerated, and in many cases, they are now more cost competitive with traditional, fossil fuel-based power generation. We believe that this ongoing diversification of power generation technologies is fundamentally positive, but without careful planning and investment there is some risk to the reliability of the domestic power grid as this transition continues. In particular, legacy fossil fuel-based assets will remain essential for some time to come and the U.S. transmission grid is broadly in need of substantial upgrades to take full advantage of these newer, more intermittent power sources. We are also optimistic about the related demand for our products as transmission grid upgrades are executed and newer power generation assets are developed using steel.

In July 2021, we announced a commitment to lower the GHG emissions intensity from our steel mill operations by 35% in 2030, measured against a 2015 baseline - the year the Paris Climate Agreement was adopted. As a result, Nucor's GHG intensity in 2030 is expected to be 77% less than today's global average. We expect to achieve these goals with a multi-pronged approach that includes utilization of renewable energy, carbon substitutes, more efficient operations and carbon sequestration.

In 2020 and 2021, we entered into three Virtual Power Purchase Agreements ("VPPAs"). Under each VPPAs, we have agreed to purchase for a fixed price a portion of the output of both solar and wind renewable power projects being developed in the United States. The VPPAs will be settled financially on a monthly basis. We have undertaken these initiatives to support the ongoing transition of the U.S. power grid to a greater reliance on renewable power. As part of these arrangements, we will also receive Renewable Energy Credits ("RECs") commensurate with the power we purchase. These RECs can be applied against a portion of our GHG emissions, enabling us to receive credit for reducing them. The pay fixed, received floating nature of this arrangement also offsets a portion of our exposure to higher prices for electricity over the life of the contract. We are evaluating and considering similar transactions. One VPPA started delivering RECs to us in June 2021 and the other two VPPAs may be delayed as a result of supply chain disruptions and permitting delays and interconnection delays.

Government and Environmental Regulations

Our business operations are subject to numerous federal, state and local laws and regulations, the most significant of which are intended to protect our teammates and the environment. Due to the nature of the steel industry, we are subject to substantial regulations related to safety in the workplace. In addition to the requirements of the state and local governments of the communities in which we operate, we must comply with federal health and safety regulations, the most significant of which are enforced by the Occupational Safety and Health Administration ("OSHA"). Because safety and safety compliance is one of our primary values, its effect on our capital expenditures, earnings and competitive position is not estimable.

Nucor operates a robust and sustainable environmental program that incorporates the concept of each individual teammate, as well as management, being responsible for environmental performance. All of Nucor's steel mills that have been in operation for over five years are ISO 14001 certified. Achieving ISO 14001 certification requires Nucor's steel mills to implement an environmental management system with measurable targets and objectives, such as reducing the use of oil and grease and minimizing electricity use.

The principal federal environmental laws that regulate our business include the Clean Air Act (the "CAA"), which regulates air emissions; the Clean Water Act (the "CWA"), which regulates water withdrawals and discharges; the Resource Conservation and Recovery Act (the "RCRA"), which addresses solid and hazardous waste treatment, storage and disposal; and the Comprehensive Environmental Response, Compensation and Liability Act (the "CERCLA"), which governs releases of hazardous substances, and remediation of contaminated sites. Our operations are also subject to state and local environmental laws and regulations.

As it relates to air emission rates, EAFs are the most efficient and cleanest steel making process commercially available today. In comparison to blast furnaces, emissions of sulfur oxides from EAFs are approximately 14% of the amount emitted from blast furnaces. EAFs emit less than 1% of the particulate emissions compared to blast furnace operations. Importantly, EAF emissions of GHGs per ton of steel average less than half of the rates typically generated by blast furnaces. Operating EAFs instead of blast furnaces is a proven air quality improvement strategy. In addition, each of our steel mills operates air pollution control devices (baghouses) to collect and capture particulate emissions ("EAF dust") from the steel making process. We strive to maintain compliance with all applicable CAA requirements.

The primary raw material of Nucor's steelmaking operations is scrap metal. The process of recycling scrap metal generates particulate matter emissions that includes contaminants such as paint, zinc, lead, chrome and other metals. Initially, the particulate matter captured and collected is classified as a listed hazardous waste under the RCRA. Because these contaminants contain valuable metals, the EAF dust is recycled to recover these metals. Nucor sends all but a small fraction of the EAF dust it collects to recycling facilities that recover the zinc, lead, chrome and other valuable metals from this dust. By recycling this material, Nucor believes it is not only acting in a sustainable, responsible manner but it is also substantially limiting its potential for future liability under both the CERCLA and the RCRA.

In addition to recycling EAF dust, Nucor mills beneficially reuse steel slag in road materials as a granular base, embankments, engineered fill, highway shoulders, and hot mix asphalt pavement. The physical, chemical, mechanical and thermal properties of steel slag provide a vital resource for construction companies and activities. We take considerable pride in our recycling efforts.

Not only does the RCRA establish standards for the management of solid and hazardous wastes, the RCRA also addresses the environmental impact of contamination from waste disposal activities and from recycling and storage of most wastes. Periodically, past waste disposal activities that were legal when conducted but now may pose a contamination threat are discovered. When the U.S. Environmental Protection Agency determines these off-site properties are contaminated, Nucor quickly evaluates such claims and, if Nucor is determined to be responsible, we do our part to remediate our share of such issues. Nucor believes all identified liabilities under the RCRA are either currently being resolved or have been fully resolved.

Because Nucor has historically implemented environmental practices that have resulted in the responsible disposal of waste materials, Nucor is also not presently considered a major contributor to any major cleanups under the CERCLA for which Nucor has been named a potentially responsible party. Nucor regularly evaluates these types of potential liabilities and, if appropriate, maintains reserves sufficient to remediate the identified liabilities. Under the RCRA, private citizens may also bring an action against the operator of a regulated facility for potential damages and payment of cleanup costs. Nucor believes that its system of internal evaluation and due diligence has sufficiently identified these types of potential liabilities so that compliance with these regulations will not have a material adverse effect on our results of operations, cash flows or financial condition beyond that already reflected in the reserves established for them.

To protect water resources, the CWA regulates water withdrawals and discharges. When applicable, Nucor maintains water withdrawal and discharge permits at its facilities under the national pollutant discharge elimination system program of the CWA and conducts its operations in compliance with those permits. Nucor also maintains permits from local governments if the facility discharges into publicly owned treatment works.

Capital expenditures at our facilities that are associated with environmental regulation compliance for 2021 and 2022 are estimated to be less than \$100 million per year.

Human Capital Resources

Culture, Organization and Compensation

We consider our teammates the most important part of Nucor and believe that our culture – and the encouragement that we provide to our teammates to "grow the core; expand beyond; and live our culture" – provides us with a competitive advantage. Our culture's key principles are: Safety First, Trust, Open Communications, Teamwork, Community Stewardship and Results.

Nucor has a simple, streamlined organizational structure that allows our teammates to make quick decisions and innovate. Our organization is also highly decentralized, with most day-to-day operating decisions made by our division general managers and their teams. With nearly 29,000 teammates, fewer than 200 work in our principal executive offices in Charlotte, North Carolina. By empowering our teammates, our goal is to foster an entrepreneurial mindset, along with a strong sense of personal responsibility and a culture of accountability. This empowerment is reinforced by our compensation policies (see "Pay for Performance" discussion in *Our Teammates, Compensation, Training & Development* section below) to drive results and contribute to our success.

Teammate input is essential for us to maintain our culture of empowering teammates to make operational decisions. Aside from our practice of everyday open communication, we periodically ask our teammates to formally provide feedback. Beginning in 1986, we have asked our teammates to complete a comprehensive survey in order to gather feedback on a range of topics, including matters relating to the effectiveness of our culture. We view the survey as an important tool we use to continually improve our company and ensure our teammates remain engaged and satisfied. This survey is conducted every three years, the last of which was conducted in 2019. In the most recent survey, 90% of the responses were favorable in the category of "Satisfaction & Commitment." The overall percentage of negative responses in the most recent survey has dropped by 25 percentage points since the survey began in 1986. The next survey will be conducted in the summer of 2022. Teammates of certain previously acquired businesses – most notably Harris, which accounted for approximately 15% of our workforce as of December 31, 2021 – complete a comparable survey that has also shown an improving trend over time.

Safety, Diversity, Equity & Inclusion

One of Nucor's core values is our teammates' well-being and safety, and it is our goal to become the safest steel company in the world. Our foremost responsibility is to work safely, which requires our teammates to identify unsafe conditions and activities and mitigate these hazards. We will continue working to eliminate exposures that can lead to injury and encourage our teammates to share their ideas for safety improvement. Two key metrics Nucor uses to measure safety are: the Injury/Illness Rate and Days Away, Restricted and Transfer ("DART") Case Rate.

Nucor calculates the annual Injury/Illness Rate by dividing the number of work-related injuries and illnesses by the total number of hours worked by all Nucor teammates in a given year, and then multiplying the resulting percentage by 200,000, the equivalent of 100 full-time employees working 40 hours per week, 50 weeks per year. In 2021, we achieved an annual Injury/Illness Rate of 1.04, which marks the safest year in the Company's history. This marks an improvement over our annual Injury/Illness Rate of 1.10 in 2020, which was the Company's previous record.

Nucor uses the DART Case Rate to assess and manage the risk of serious injury in the workplace. Nucor calculates the annual DART Case Rate by dividing the number of cases resulting in days away from work, restricted work activity and/or job transfers by the total number of hours worked by all Nucor teammates in a given year, and then multiplying the resulting percentage by 200,000, the equivalent of 100 full-time employees working 40 hours per week, 50 weeks per year. In 2021, we achieved an annual DART Case Rate of 0.50 (0.59 in 2020).

Beginning in 1998, Nucor has used the President's Safety Award to recognize divisions that achieve strong records of safety performance based on objective metrics. The President's Safety Award has the following three levels: Platinum, which is awarded to divisions with zero recordable illnesses or injuries; Gold, which is awarded to divisions that have an Illness/Injury Rate below 0.6 and a DART Case Rate below one-third of the national average for their NAICS code; and Silver, which is awarded to divisions that achieve one-third the national average on Illness/Injury Rate and DART Case Rate. In 2021, 16 divisions achieved the Platinum level award, 14 divisions achieved the Gold level award and 17 divisions achieved the Silver level award. Nucor also has 25 OSHA Voluntary Protection Program Sites, OSHA's highest level of recognition.

In 2020, the Company introduced the Nucor President's Safety Cup as a way to foster more safety benchmarking throughout the Company. The President's Safety Cup is an additional annual award that is presented to the region that has the best safety record across all of Nucor. Not only does this reward a facility for exceeding their individual safety goals, but it encourages our teams to work with their regional teammates to share ideas and improve safety as a group. The President's Safety Cup trophy travels among the mills and divisions that make up the winning region.

We believe however, that Safety is about more than just avoiding injuries. At Nucor, safety means making sure our teammates feel safe, welcome and valued when they come to work each day. We are accelerating our diversity, equity and inclusion efforts with the objective of ensuring that each teammate feels a sense of belonging at Nucor. By creating an inclusive workplace, we believe we will attract top talent and achieve greater diversity in our workforce and leadership, which will make Nucor a stronger company. Some of the initiatives focused on inclusion, equity and diversity we have launched include:

- Conducting focused discussion groups to share experiences of the workplace and the effects of race and gender
- Taking feedback onboard to enhance training and development
- Webcasts by diverse senior leaders sharing their career progression and life experiences
- Increasing tempo and intensity of engagement with supportive external partners, such as
 - Society of Black Engineers
 - Society of Women Engineers
 - Tuskegee University
 - INROADS (non-profit focused on addressing the lack of diversity in corporate America)
- More proactive senior executive support for career development opportunities for diverse employees

Our Teammates - Compensation, Training & Development

Nucor had approximately 28,800 teammates as of December 31, 2021. The vast majority of our teammates are located in the United States, with only a small number of teammates located outside of North America. Our operations are highly automated, allowing us to take advantage of lower employment costs while still providing our teammates with compensation that we believe is highly competitive as compared to businesses in our industry. At Nucor, we believe in "Pay-for-Performance." Nucor teammates typically earn a significant part of their compensation based on their productivity. Production teammates work under group incentives that provide increased earnings for increased production. This additional incentive compensation is paid weekly in most cases. Nucor has also historically contributed 10% of earnings before federal taxes to a profit sharing plan for the majority of teammates below the officer level. We believe such compensation practices incentivize our workforce and reinforce our culture. For 2021, this profit sharing contribution, was the largest in our history and amounted to approximately \$861 million.

While Nucor seeks to hire qualified and talented individuals as teammates, we also believe in developing the skills of our workforce by providing educational and on-the-job training, in addition to safety training. Further, Nucor believes it is important for senior management to also be familiar with, and have had direct experience running, Nucor's mills and other operational divisions. The vast majority of our teammates are not represented by labor unions and we believe our teammate turnover is low.

At Nucor, we believe that a diversity of perspectives and background helps to facilitate the "Nucor Way" as we work to "grow the core; expand beyond; and live our culture." We also believe that recruiting and hiring the best talent available will continue to provide us with a more diverse and capable workforce.

Policies

Nucor has a long history of conducting our businesses in a manner consistent with high standards of social responsibility. We have adopted a comprehensive Human Rights Policy, which operates in conjunction with many other Nucor policies related to ethical conduct and human rights, including our Standards of Business Conduct and Ethics, Code of Ethics for Senior Financial Professionals, Supplier Code of Conduct and Policy on Eliminating Forced Labor from our Supply Chain.

Available Information

Nucor's Annual Report on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, and any amendments to these reports, as well as proxy statements and other information, are available on our website at www.nucor.com, as soon as reasonably practicable after Nucor files these documents electronically with, or furnishes them to, the U.S. Securities and Exchange Commission (the "SEC").

We use the investor relations portion of our website, www.nucor.com/investors, to distribute information, including as a means of disclosing material, non-public information and for complying with our disclosure obligations under Regulation FD. We routinely post and make accessible financial and other information regarding the Company on our website. Accordingly, investors should monitor the investor relations portion of our website, in addition to our press releases, SEC filings and other public communications. Except as otherwise expressly stated in these documents, the information contained on our website or available by hyperlink from our website is not a part of this report and is not incorporated into this report or any other documents we file with, or furnish to, the SEC.

Item 1A. Risk Factors

Many of the factors that affect our business and operations involve risk and uncertainty. The factors described below are some of the risks that could materially negatively affect our business, financial condition, results of operations and cash flows.

Industry Specific Risk Factors

Overcapacity in the global steel industry could increase the level of steel imports, which may negatively affect our business, results of operations, financial condition and cash flows.

Global steel production overcapacity continues to be an ongoing risk to Nucor and the entire steel industry. The OECD estimates that global steel production overcapacity currently approximately 500,000,000 tons, with additional capacity expected to come online over the next few years. China continues to be a significant contributor to excess steelmaking capacity, producing more than 1 billion tons of steel in each of the past two years. China is also investing in new steelmaking capacity in several countries in southeast Asia.

During periods of global economic weakness, this overcapacity is amplified because of weaker global demand for steel and steel products. This excess capacity often results in manufacturers in certain countries exporting significant amounts of steel and steel products at prices that are at or below their costs of production. In some countries the steel industry is subsidized or owned in whole or in part by the government, giving imported steel from those countries certain cost advantages. These imports, which are also affected by demand in the domestic market, international currency conversion rates, and domestic and international government actions, can result in downward pressure on steel prices, which could materially adversely affect our business, results of operations, financial condition and cash flows.

Our business requires substantial capital investment and maintenance expenditures, and our capital resources may not be adequate to provide for all of our cash requirements.

Our operations are capital intensive. For the three-year period ended December 31, 2021, our total capital expenditures were approximately \$4.74 billion. Our business requires substantial expenditures for routine maintenance. We also recently announced substantial capital projects that we expect will increase production capacity, increase the efficiency of our operations and enhance our product offerings. Although we expect requirements for our business needs, including the funding of capital expenditures, debt service for financings and any contingencies, will be financed by internally generated funds, short-term commercial paper issuance, offerings of our debt and equity securities or from borrowings under our \$1.75 billion unsecured revolving credit facility, we cannot guarantee that this will be the case. Additional acquisitions, increases in interest rates or unforeseen events could require financing from additional sources.

Changes in the availability and cost of electricity and natural gas are subject to volatile market conditions that could adversely affect our business.

Our steel mills are large consumers of electricity and natural gas. In addition, our DRI facilities are also large consumers of natural gas. We rely upon third parties for our supply of energy resources consumed in the manufacture of our products. The prices for and availability of electricity and natural gas are subject to volatile market conditions. These market conditions often are affected by weather, political, regulatory and economic factors beyond our control, and we may be unable to raise the price of our products to cover increased energy costs. Disruptions, including physical or information systems related issues, that impact the supply of our energy resources could temporarily impair our ability to manufacture our products for our customers. Increases in our energy costs resulting from market fluctuations or regulations that are not equally applicable across the entire global steel market could materially adversely affect our business, results of operations, financial condition and cash flows.

Competition from other steel producers, imports or alternative materials may adversely affect our business.

We face strong competition from other steel producers and imports that compete with our products on price, quality and service. The steel markets are highly competitive and a number of firms, domestic and foreign, participate in the steel, steel products and raw materials markets. Depending on a variety of factors, including the cost and availability of raw materials, energy, technology, labor, transportation and capital costs, currency exchange rates, government subsidies of foreign steel producers and other global political and economic factors, our business may be materially adversely affected by competitive forces.

In many applications, steel competes with other materials, such as concrete, aluminum, plastics, composites and wood. Increased use or availability of these materials in substitution for steel products could have a material adverse effect on prices and demand for our steel products.

Since 2011, automobile producers have begun taking steps towards complying with new Corporate Average Fuel Economy mileage requirements for new cars and light trucks that they produce. As automobile producers work to produce vehicles in compliance with these new standards, they may seek to reduce the amount of steel they incorporate in their vehicles, require different types or higher grades of steel products, or begin utilizing alternative materials in cars and light trucks to improve fuel economy, thereby reducing their demand for steel. Certain automakers have begun to use greater amounts of aluminum and smaller proportions of steel in some models since 2015. Additional shifts in demand for steel products by automobile producers could materially adversely affect our business, results of operations, financial condition and cash flows.

Our industry is cyclical and both recessions and prolonged periods of slow economic growth could have an adverse effect on our business.

Demand for most of our products is cyclical in nature and sensitive to general economic conditions. Our business supports cyclical industries, such as the commercial construction, energy, metals service centers, appliance and automotive industries. As a result, downturns in the U.S. economy or any of these industries could materially adversely affect our results of operations, financial condition and cash flows.

The U.S. economy has experienced a strong recovery from the conditions experienced at the onset of the COVID-19 pandemic, but new variants of COVID-19 and the continued abatement of the COVID-19 pandemic, labor shortages, supply chain disruptions, new or proposed legislation related to governmental spending, inflation and increases in interest rates have impacted, and will continue to impact, economic growth. Even with this economic recovery, challenges from global production overcapacity in the steel industry and ongoing uncertainties, both in the United States and in other regions of the world, remain.

We are unable to predict with certainty the duration of current economic conditions or the magnitude and timing of changes in economic activity. Future economic downturns, prolonged slow growth or stagnation in the economy, a sector-specific slowdown in one of our key end-use markets, such as nonresidential construction, or changes in inflation could materially adversely affect our business, results of operations, financial condition and cash flows, especially in light of the capital-intensive nature of our business.

The results of our operations are sensitive to volatility in steel prices and the cost and availability of raw materials, particularly scrap steel.

We rely to an extent on outside vendors to supply us with key consumables such as graphite electrodes and raw materials, including both scrap and scrap substitutes that are critical to the manufacture of our steel products. The raw material required to produce DRI is pelletized iron ore. Although we have vertically integrated our business by constructing our DRI facilities in Trinidad and Louisiana and also by acquiring DJJ in 2008, we still must purchase most of our primary raw material, steel scrap, from numerous other sources located throughout the United States and internationally. Although we believe that the supply of scrap and scrap substitutes is adequate to operate our facilities, prices of these critical raw materials are volatile and are influenced by changes in scrap exports in response to changes in the scrap, scrap substitutes and iron ore demands of our global competitors, as well as volatility in currency rates and political conditions. For example, we source a substantial amount of our scrap and scrap substitutes from countries in Europe such as Russia and Ukraine. If political conditions in those countries or their relations with the United States or each other further deteriorate, or such countries were to become subject to sanctions or other restrictions or interruptions in trade with the United States, it may materially affect the price and availability of scrap and scrap substitutes.

At any given time, we may be unable to obtain an adequate supply of these critical raw materials with price and other terms acceptable to us. The availability and prices of raw materials may also be negatively affected by new laws and regulations, allocation by suppliers, interruptions in production, accidents or natural disasters, war and other forms of armed conflict or political instability, changes in exchange rates, worldwide price fluctuations, including due to global political and economic factors, changes in governmental, business and consumer spending, inflation, increases in interest rates, labor shortages, and the availability and cost of transportation, including as a result of the COVID-19 pandemic. Many countries that export steel into our markets restrict the export of scrap, protecting the supply chain of some foreign competitors. This trade practice creates an artificial competitive advantage for foreign producers that could limit our ability to compete in the U.S. market.

If our suppliers increase the prices of our critical raw materials, we may not have alternative sources of supply. In addition, to the extent that we have quoted prices to our customers and accepted customer orders for our products prior to purchasing necessary raw materials, we may be unable to raise the price of our products to cover all or part of the increased cost of the raw materials or pass along increased transportation costs. Also, if we are unable to obtain adequate, cost-effective and timely deliveries of our required raw materials, we may be unable to timely manufacture sufficient quantities of our products. This could cause us to lose sales, incur additional costs, experience margin compressions or suffer harm to our reputation and customer relationships.

Our steelmaking processes, our DRI processes, and the manufacturing processes of many of our suppliers, customers and competitors are energy intensive and generate carbon dioxide and other GHGs. The regulation of these GHGs could have a material adverse impact on our results of operations, financial condition and cash flows.

Our operations are subject to numerous federal, state and local laws and regulations relating to the protection of the environment, and, accordingly, we make provision in our financial statements for the estimated costs of compliance. There are inherent uncertainties in these estimates. Most notably, the uncertainty of policies, enforcement priorities, legislation and regulations related to climate change mitigation strategies pose the greatest risk.

As a carbon steel producer, Nucor could be increasingly affected both directly and indirectly if carbon policy decisions and mandates are not properly implemented. Carbon is an essential raw material in Nucor's steel production processes. Furthermore, Nucor steel mills utilize EAFs for 100% of their steel melting operations and the costs associated with the decarbonization of electricity generation is a significant concern. Significant new rulemaking or legislation could have a material adverse impact on our results of operations, financial condition and cash flows.

Environmental regulation compliance and remediation could result in substantially increased costs and materially adversely impact our competitive position.

We incur significant costs in meeting our environmental regulation compliance and remediation obligations. The principal federal environmental laws include the CAA, which regulates air emissions; the CWA which regulates water withdrawals and discharges; the RCRA, which addresses solid and hazardous waste treatment, storage and disposal; and the CERCLA, which governs releases of hazardous substances, and remediation of contaminated sites. Our operations are also subject to state and local environmental laws and regulations. Capital expenditures at our facilities that are associated with environmental regulation compliance for 2022 and 2023 are estimated to be less than \$100 million per year.

In addition to the above mentioned statutes, certain revisions to National Air Ambient Quality Standards could make it significantly more difficult for us to obtain construction permits and permits to expand existing operations. Resulting cancellations, delays or unanticipated costs to these projects could negatively impact our ability to generate expected returns on our investments. These regulations can also increase our cost of energy, primarily electricity, which we use extensively in the steelmaking process. We may in the future incur substantially increased costs complying with such regulations, particularly if federal regulatory agencies were to change their enforcement posture with respect to such regulations.

Emerging customer preferences for greater product transparency and less GHG intensive materials may put us at a competitive disadvantage or reduce demand for our products.

Numerous states, including Washington, Oregon and New York, are considering establishing requirements for Environmental Product Declarations ("EPDs") to evaluate environmental impacts of products. California has enacted the "Buy Clean California Act" and California has established Global Warming Potential (GWP) benchmarks through EPDs for certain materials, including certain steel products. Currently, the federal government is considering similar legislation. To provide for greater product transparency, Nucor contracted an independent, third-party to evaluate and publish EPDs for many of its products. Nucor's EPDs extend beyond what is required under the "Buy Clean California Act", which requires EPDs for four steel products. The following Nucor products have been evaluated and issued a corresponding EPD: fabricated hot-rolled structural steel sections; fabricated steel concrete reinforcing bar and merchant bar products; steel reinforcing bar and merchant bar products; fabricated steel hollow structural sections; fabricated structural plate; fabricated open web steel joist and joist girders; and fabricated steel roof and floor deck.

EPD legislation has the potential to put domestic steel manufacturers at a disadvantage to foreign competitors unless standardized mechanisms are used to fully evaluate products produced by foreign steel producers.

General Risk Factors

The COVID-19 pandemic, as well as similar epidemics and other public health emergencies in the future, could have a material adverse effect on our business, results of operations, financial condition and cash flows.

Our operations expose us to risks associated with pandemics, epidemics and other public health emergencies, such as the ongoing COVID-19 pandemic which spread from China to many other countries including the United States. The COVID-19 pandemic has had and may have further negative impacts on our operations, supply chain, transportation networks and customers, which may compress our margins or impact demand for our steel products, including as a result of preventative and precautionary measures that we, other businesses and governments have taken or may take in the future. The COVID-19 pandemic and governmental actions in response have adversely affected the economies of many countries and caused periodic disruption to and increased volatility in financial markets. The progression of the COVID-19 pandemic, including due to new variants of COVID-19, could also negatively impact our business or results of operations through the temporary closure of our operating facilities or those of our customers or suppliers.

In addition, the ability of our teammates and our suppliers' and customers' teammates to work may be significantly impacted by individuals contracting or being exposed to COVID-19. Our customers may be directly impacted by business interruptions or weak market conditions and may not be willing or able to fulfill their contractual obligations. Furthermore, the progression of and global response to the COVID-19 pandemic has caused and increased the risk of further delays in construction activities and equipment deliveries related to our capital projects, including potential delays in obtaining permits from government agencies, as well as changes in the prices and availability of labor and equipment for capital projects. The extent of such delays and other effects of COVID-19 on our capital projects, certain of which are outside of our control, is unknown, but they could impact or delay the timing of anticipated benefits on capital projects.

The extent to which COVID-19 may adversely impact our business depends on future developments, which are highly uncertain and unpredictable, including new variants of the virus, information concerning the severity of the pandemic, the adoption rate of vaccines, and the effectiveness of actions globally to contain or mitigate the effects of the pandemic. The current level of uncertainty over the economic and operational impacts of COVID-19 means the related financial impact cannot be reasonably estimated at this time.

We are subject to information technology and cyber security threats which could have an adverse effect on our business and results of operations.

We utilize various information technology systems to efficiently address business functions ranging from the operation of our production equipment to administrative computation to the storage of data such as intellectual property and proprietary business information. We also utilize third-party service providers for certain information technology services that are important to our operations. We continuously evaluate our cyber security systems and practices, assess potential threats, and improve our information technology networks, policies and procedures to address potential vulnerabilities. Despite efforts to assure secure and uninterrupted operations, threats from increasingly sophisticated cyber-attacks or system failures could result in materially adverse operational disruptions or security breaches of our systems or those of our third-party service providers. These risks could result in disclosure or destruction of key proprietary information or personal data or reputational damage, theft of assets or trade secrets, or could adversely affect our ability to physically produce or transport steel, resulting in lost revenues, as well as delays in reporting our financial results. We also could be required to spend significant financial and other resources to remedy the damage caused by a cyber security breach, including to repair or replace networks and information technology systems. We may also contend with potential liability for stolen information, increased cyber security protection costs, litigation expense and increased insurance premiums.

Our operations are subject to business interruptions and casualty losses.

The steelmaking business is subject to numerous inherent risks, particularly unplanned events such as explosions, fires, other accidents, natural disasters such as floods or earthquakes, critical equipment failures, acts of terrorism, inclement weather and transportation interruptions. While our insurance coverage could offset a portion of the losses relating to some of those types of events, our results of operations and cash flows could be adversely impacted to the extent that any such losses are not covered by our insurance, or that there are significant delays in resolving our claims with our insurance providers.

We acquire businesses and enter into joint ventures from time to time and we may encounter difficulties in integrating businesses we acquire.

We plan to continue to seek attractive opportunities to acquire businesses, enter into joint ventures and make other investments that strengthen Nucor. Realizing the anticipated benefits of acquisitions or other transactions will depend on our ability to operate these businesses and integrate them with our operations effectively identify and manage risks, and cooperate with our strategic partners. Our business, results of operations, financial condition and cash flows could be materially adversely affected if we are unable to successfully integrate these businesses or otherwise fail to realize the anticipated benefits of acquisitions or other transactions.

Risks associated with operating in international markets could adversely affect our business, financial position and results of operations.

Certain of our businesses and investments are located outside of the United States, in Canada, Mexico and in emerging markets. There are a number of risks inherent in doing business in or sourcing raw materials from such markets. These risks include, but are not limited to: unfavorable political or economic factors; local labor and social issues; changes in regulatory requirements; fluctuations in foreign currency exchange rates, interest rates and inflation; and complex foreign laws, treaties including tax laws, and the Foreign Corrupt Practices Act of 1977 (FCPA). These risks could restrict our ability to operate our international businesses profitably and therefore have a negative impact on our financial position and results of operations. In addition, our reported results of operations and financial position could also be negatively affected by exchange rates when the activities and balances of our foreign operations are translated into U.S. dollars for financial reporting purposes.

The accounting treatment of equity method investments, goodwill and other long-lived assets could result in future asset impairments, which would reduce our earnings.

We periodically test our equity method investments, goodwill and other long-lived assets to determine whether their estimated fair value is less than their value recorded on our balance sheet. The results of this testing for potential impairment may be adversely affected by uncertain market conditions for the global steel industry, as well as changes in interest rates, commodity prices and general economic conditions. If we determine that the fair value of any of these assets is less than the value recorded on our balance sheet, and, in the case of equity method investments the decline is other than temporary, we would likely incur a non-cash impairment loss that would negatively impact our results of operations.

Tax increases and changes in tax laws and regulations or exposure to additional tax liabilities could adversely affect our financial results.

The steel industry and our business are sensitive to changes in taxes. As a company based in the United States, Nucor is more exposed to the effects of changes in U.S. tax laws than some of our major competitors. Our provision for income taxes and cash tax liability in the future could be adversely affected by changes in U.S. tax laws.

Nucor recognizes the effect of income tax positions only if those positions are believed to be more likely than not of being sustained. We cannot predict whether taxing authorities will conduct an audit challenging any of our tax positions and there can be no assurance as to the outcome of any challenges. If we are unsuccessful in any of these matters, we may be required to pay taxes for prior periods, interest, fines or penalties.

We are subject to legal proceedings and legal compliance risks.

We spend substantial resources ensuring that we comply with domestic and foreign regulations, contractual obligations and other legal standards. Notwithstanding this, we are subject to a variety of legal proceedings and legal compliance risks in respect of various issues, including regulatory, safety, environmental, employment, transportation, intellectual property, contractual, import/export, international trade and governmental matters that arise in the course of our business and in our industry. For information regarding our current significant legal proceedings, see "Item 3. Legal Proceedings." A negative outcome in an unusual or significant legal proceeding or compliance investigation could adversely affect our financial condition and results of operations. While we believe that we have adopted appropriate risk management and compliance programs, the nature of our operations means that legal compliance risks will continue to exist and additional legal proceedings and other contingencies, the outcome of which cannot be predicted with certainty, will arise from time to time.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

We own most of our principal operating facilities. These facilities, by segment, are as follows:

we own most of our principal operating facilities	Approximate	illies, by segment, are as follows.
Leaden	square footage	Boto storet con donate

In the steel products segment, we have 89 operating facilities, excluding the locations listed above, in 38 states with 29 operating facilities in Canada and two in Mexico. Our subsidiary, Harris Steel Inc., also operates multiple sales offices in Canada and certain other foreign locations. The steel products segment also includes Skyline Steel, LLC, our steel foundation distributor. Hannibal Industries, Inc., which

we acquired during 2021, has leased square footage of approximately 630,000 square feet in Los Angeles, California, and has leased square footage of approximately 420,000 square feet in Houston, Texas.

In the raw materials segment, we have 94 operating facilities in 22 states with one operating facility in Point Lisas, Trinidad. For our DRI facilities in Trinidad and Louisiana, a significant portion of the production process occurs outdoors. The Trinidad site, including leased land, is approximately 1.9 million square feet. The Louisiana site has approximately 174.2 million square feet of owned land with buildings that total approximately 72,500 square feet. DJJ has 88 operating facilities in 21 states along with multiple brokerage offices in the United States and certain other foreign locations.

The average utilization rates of all operating facilities in the steel mills, steel products and raw materials segments in 2021 were approximately 94%, 76% and 75% of production capacity, respectively.

We also own our principal executive offices in Charlotte, North Carolina.

Item 3. Legal Proceedings

Nucor is from time to time a party to various lawsuits, claims and other legal proceedings that arise in the ordinary course of business. With respect to all such lawsuits, claims and proceedings, we record reserves when it is probable a liability has been incurred and the amount of loss can be reasonably estimated. We do not believe that any of these proceedings, individually or in the aggregate, would be expected to have a material adverse effect on our results of operations, financial position or cash flows. Nucor maintains liability insurance with self-insurance limits for certain risks.

There were no proceedings that were pending or contemplated under federal, state or local environmental laws that the Company reasonably believes may result in monetary sanctions of at least \$1.0 million (the threshold chosen by Nucor as permitted by Item 103 of Regulation S-K promulgated under the Securities Exchange Act of 1934, as amended, and which Nucor believes is reasonably designed to result in disclosure of any such proceeding that is material to its business or financial condition).

Item 4. Mine Safety Disclosures

Not applicable.

Information About Our Executive Officers

The following is a description of the names and ages of the executive officers of the Company, indicating all positions and offices with the Company held by each such person and each person's principal occupation or employment during the past five years. Each executive officer of Nucor is elected by the Board of Directors and holds office from the date of election until thereafter removed by the Board.

Allen C. Behr (48), Executive Vice President of Plate and Structural Products, was named EVP in May 2020. Mr. Behr began his career with Nucor in 1996 as Design Engineer at Nucor Building Systems-Indiana and joined the start-up team at Nucor Building Systems-Texas in 1999. In 2001, he became the Engineering Manager at Nucor Building Systems-South Carolina and was promoted to General Manager in 2008. Mr. Behr became the General Manager of Vulcraft-South Carolina in 2011 and was promoted to Vice President in 2012. He was promoted to President of the Vulcraft/Verco group in 2014 and he served as General Manager of Nucor Steel-Texas from 2017 to 2019.

James D. Frias (65) has served as Chief Financial Officer, Treasurer and Executive Vice President since 2010. Prior to that, Mr. Frias was Vice President of Finance from 2006 to 2009. Mr. Frias joined Nucor in 1991 as Controller of Nucor Building Systems-Indiana. He also served as Controller of Nucor Steel-Indiana and as Corporate Controller. Mr. Frias joined the board of directors of Carlisle Companies Incorporated in 2015. Mr. Frias has announced that he will retire effective June 11, 2022.

Douglas J. Jellison (63), Executive Vice President of Raw Materials, was named EVP in January 2021. Mr. Jellison began his Nucor career in 1990 as Materials Manager at Nucor Bearing Products and has worked in various positions and businesses in his more than 30 years with Nucor, including several controller and business development roles. Mr. Jellison was promoted to Vice President in 2004 and served as General Manager of Nucor Bearing Products, Nucor Steel Seattle, Inc. and Nucor-Yamato. He then served as President of Nucor Tubular Products and most recently as President of Nucor's steel piling subsidiary, Skyline Steel LLC.

Gregory J. Murphy (58), Executive Vice President of Business Services and General Counsel, was named EVP in January 2021. Mr. Murphy began his Nucor career in 2015 as Vice President and General Counsel. In 2020, he assumed additional responsibilities and was named General Counsel and Vice President of Legal, Environmental and Public Affairs. Prior to joining Nucor, Mr. Murphy was a Partner with the law firm of Moore & Van Allen PLLC, where he was the team leader of the Litigation Practice Group and served for a decade on the firm's Executive Committee.

Daniel R. Needham (56), Executive Vice President of Bar, Engineered Bar and Rebar Fabrication Products was named EVP in February 2021. Mr. Needham began his career with Nucor in 2000 as Controller at Nucor Steel Hertford County. He subsequently served as Controller of Nucor Steel Decatur, LLC and Nucor Steel Utah. In 2011, Mr. Needham became General Manager of Nucor Steel Connecticut, Inc. He later served as General Manager of Nucor Steel Utah and was elected Vice President in 2016. In 2019, Mr. Needham was promoted to Vice President and General Manager of Nucor Steel Indiana.

K. Rex Query (56), Executive Vice President of Sheet and Tubular Products, was named EVP in January 2021. Mr. Query joined Nucor in 1990 as a financial analyst in the Corporate Office and subsequently served as Controller at Vulcraft South Carolina, Nucor Steel Berkeley and Nucor Steel Hertford. After serving as General Manager and Corporate Controller, Mr. Query was elected to Vice President in 2002 and served as General Manager at Nucor Steel Auburn, Inc., Nucor Steel Decatur, LLC, Nucor Steel South Carolina and NCF as well as President of Nucor Europe. Most recently, Mr. Query served as President of Nucor's Vulcraft/Verco group. Mr. Query is married to the sister of Mr. Topalian's wife.

MaryEmily Slate (57), Executive Vice President of Commercial, was named EVP in May 2019, Ms. Slate began her career with Nucor in 2000 as a District Sales Manager at Nucor Steel Arkansas. She later served as Sales Manager at Nucor Steel Decatur, LLC and then as Cold Mill Manager. In 2010, Ms. Slate was promoted to General Manager of Nucor Steel Auburn, Inc. and was elected Vice President in 2012. She served as Vice President of Nucor Steel Arkansas from 2015 to 2019.

David A. Sumoski (55), was named Chief Operating Officer, in January 2021. He previously served as Executive Vice President from 2014 to 2020, most recently as EVP of Merchant and Rebar Products. He also served as General Manager of Nucor Steel Memphis, Inc. from 2012 to 2014 and as General Manager of Nucor Steel Marion, Inc. from 2008 to 2012. Mr. Sumoski was named Vice President in 2010. He began his career with Nucor as an electrical supervisor at Nucor Steel-Berkeley in 1995, later serving as Maintenance Manager.

Leon J. Topalian (53), has served as President and Chief Executive Officer since January 2020. He previously served as President and Chief Operating Officer from September 2019 to December 2019, as Executive Vice President of Beam and Plate Products from 2017 to 2019 and as Vice President of Nucor from 2013 to 2017. He began his Nucor career at Nucor Steel-Berkeley in 1996, serving as a project engineer and then as cold mill production supervisor. Mr. Topalian was promoted to Operations Manager for Nucor's former joint venture in Australia and later served as Melting and Casting Manager at Nucor Steel-South Carolina. He then served as General Manager of Nucor Steel Kankakee, Inc. from 2011 to 2014 and as General Manager of Nucor-Yamato from 2014 to 2017. Mr. Topalian is married to the sister of Mr. Query's wife.

D. Chad Utermark (53), Executive Vice President of Fabricated Construction Products, was named EVP in 2014. He previously served as General Manager of Nucor-Yamato from 2011 to 2014 and as General Manager of Nucor Steel-Texas from 2008 to 2011. He was named Vice President of Nucor in 2009. Mr. Utermark began his Nucor career as a utility operator at Nucor Steel-Arkansas in 1992, subsequently serving as shift supervisor and Hot Mill Manager at that division as well as Roll Mill Manager at Nucor Steel-Texas.

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Our common stock is listed and traded on the New York Stock Exchange under the symbol "NUE." As of January 31, 2022, there were approximately 13,000 stockholders of record of our common stock.

Our share repurchase program activity for each of the three months and the quarter ended December 31, 2021 was as follows (in thousands, except per share amounts):

	Total Number of Shares Purchased	Average Price Paid per Share (1)		Total Number of Shares Purchased as Part of Publicly Announced Plans or) Programs (2)		Approximate Dollar Value of Shares that May Yet Be Purchased Under the Plans or Programs (2)	
October 3, 2021—October 30, 2021	900	\$	111.22	900	\$	1,839,967	
October 31, 2021—November 27, 2021	8,358	\$	112.24	8,358	\$	901,865	
November 28, 2021—December 31, 2021	4,199	\$	110.50	4,199	\$	3,849,489	
For the Quarter Ended December 31, 2021	13,457			13,457			

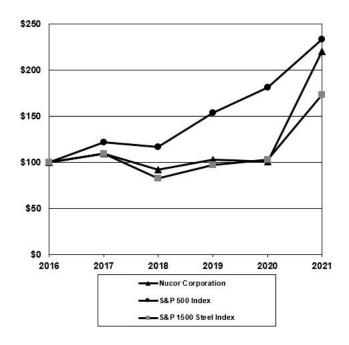

- (1) Includes commissions of \$0.17 per share.
- (2) On December 2, 2021, the Company announced that the Board of Directors had approved a new share repurchase program under which the Company is authorized to repurchase up to \$4.00 billion of the Company's common stock and terminated all previously authorized share repurchase programs. The share repurchase authorization is discretionary and has no expiration date.

Nucor has increased its base cash dividend every year since the Company began paying dividends in 1973. Nucor paid a total dividend of \$1.62 per share in 2021 compared with \$1.61 per share in 2020. In December 2021, the Board of Directors increased the base quarterly cash dividend on Nucor's common stock to \$0.50 per share from \$0.405 per share. In February 2022, the Board of Directors declared Nucor's 196th consecutive quarterly cash dividend of \$0.50 per share payable on May 11, 2022 to stockholders of record on March 31, 2022.

See Note 16 to the Company's consolidated financial statements for a discussion regarding securities authorized for issuance under the Company's stock-based compensation plans.

Stock Performance

This graphic comparison assumes the investment of \$100 in each of Nucor common stock, the S&P 500 Index and the S&P 1500 Steel Index, all at year-end 2016. The resulting cumulative total return assumes that cash dividends were reinvested. Nucor common stock comprised 39% of the S&P 1500 Steel Index at year-end 2021 (36% at year-end 2016).

Item 6. [Reserved]

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following Management's Discussion and Analysis of Financial Condition and Results of Operations of Nucor Corporation should be read in conjunction with the consolidated financial statements of the Company and the accompanying notes to the consolidated financial statements.

Management's Discussion and Analysis of Financial Condition and Results of Operations included in this report discusses our financial condition and results of operations as of and for the years ended December 31, 2021 and 2020. Information concerning the year ended December 31, 2020 and a comparison of the years ended December 31, 2020 and 2019 may be found under "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" in the Company's Annual Report on Form 10-K for the year ended December 31, 2020, filed with the SEC on February 26, 2021.

Overview

The U.S. economy experienced strong growth in 2021, growing by 5.7%, the largest annual increase since 1984. This performance was a significant improvement over 2020 when the economy shrank by 3.4% in response to the onset of the COVID-19 pandemic. The COVID-19 pandemic continued to have an impact on our business and operations, but the impact was significantly lessened than that experienced in 2020. Market demand in 2021 was very strong across most of the end markets we serve and selling prices for steel and steel products were at historically high levels. Operating rates at our steel mills for the full year 2021 increased to 94% as compared to 82% for the full year 2020.

Our Challenges and Risks

Global steel production overcapacity continues to be an ongoing risk to Nucor and the entire steel industry, with the OECD estimating that global steel production overcapacity is currently approximately 500 million tons, which is down slightly from previous years. However, additional capacity continues to come online and China's steel production, the largest steel producing country, is still near record levels. In 2021, China's steel production was 1.13 billion tons compared to the record amount of 1.16 billion tons the previous year. Circumvention of trade duties also continues to pose a risk, as countries route products through third-party countries to evade duties. Increasingly, China is seeking to evade trade duties by building new steelmaking capacity in other countries with a focus on neighboring countries in southeast Asia.

A major uncertainty we continue to face in our business is the price of our principal raw material, ferrous scrap, which is volatile and often increases or decreases rapidly in response to changes in domestic demand, unanticipated events that affect the flow of scrap into scrap yards, the availability of scrap substitutes, currency fluctuations and changes in foreign demand for scrap. In periods of rapidly increasing raw material prices in the industry, which are often also associated with periods of stronger or rapidly improving steel market conditions, being able to increase our prices for the products we sell quickly enough to offset increases in the prices we pay for ferrous scrap is challenging but critical to maintaining our profitability. We attempt to mitigate the scrap price risk by managing scrap inventory levels at the steel mills to match the anticipated demand over the next several weeks. Certain scrap substitutes, including pig iron, have longer lead times for delivery than scrap, which can make this inventory management strategy difficult to achieve. Continued successful implementation of our raw material strategy, including key investments in DRI production, coupled with the scrap brokerage and processing services performed by our team at DJJ, give us greater control over our metallic inputs and thus also helps us to mitigate this risk.

During periods of stronger or rapidly improving steel market conditions, we are more likely to be able to pass through to our customers, relatively quickly, the increased costs of ferrous scrap and scrap substitutes, protecting our gross margins from significant erosion. During periods of weaker or rapidly deteriorating steel market conditions, weak steel demand, low industry utilization rates and the impact of imports create an even more intensified competitive environment and increased pricing pressure. All of those factors, to some degree, impact pricing, which increases the likelihood that Nucor will experience lower gross margins.

Although the majority of our steel sales are to spot market customers in North America who place their orders each month based on their business needs and our pricing competitiveness compared to both domestic and global producers and trading companies, we also sell contract tons, most notably in our sheet operations. Approximately 80% of our sheet sales were to contract customers in 2021 (70% in 2020), with the balance being sold in the spot market at the prevailing prices at the time of sale. Steel contract sales outside of our sheet operations are not significant. The amount of tons sold to contract customers at any given time depends on the overall market conditions at the time, how the end-use customers see the market moving forward and the strategy that Nucor management believes is appropriate to the upcoming period.

Nucor management considerations include maintaining an appropriate balance of spot and contract tons based on market projections and appropriately supporting our diversified customer base. The percentage of tons that is placed under contract also depends on the overall market dynamics and customer negotiations. In years of strengthening demand, we typically see an increase in the percentage of sheet sales sold under contract as our customers have an expectation that transaction prices will rapidly rise, and available capacity will quickly be sold out. To mitigate this risk, customers prefer to enter into contracts in order to obtain committed volumes of supply from the mills. The vast majority of our contracts include a method of adjusting prices on a periodic basis to reflect changes in the market pricing for steel and/or scrap. Market indices for steel generally trend with scrap pricing changes, but, during periods of steel market weakness, the more intensified competitive steel market environment can cause the sales price indices to decrease resulting in reduced gross margins and profitability. Furthermore, since the selling price adjustments are not immediate, there will always be a timing difference between changes in the prices we pay for raw materials and the adjustments we make to our contract selling prices. Generally, in periods of increasing scrap prices, we typically experience a short-term margin contraction on contract tons. Conversely, in periods of decreasing scrap prices, we typically experience a short-term margin expansion on contract tons. Contract sales typically have terms ranging from six to 12 months.

Our Strengths and Opportunities

We are North America's most diversified steel producer. As a result, our short-term performance is not tied to any one market. We have numerous, large, strategic capital projects at various stages of progress that we believe will help us further diversify our product offerings and expand the markets that we serve. We expect these investments to grow our long-term earnings power by increasing our channels to market, expanding our product portfolio into higher value-added offerings that are less vulnerable to imports, improving our cost structure and further building upon our market leadership positions.

We believe that Nucor's raw material supply chain is another important strength. Our investment in DRI production facilities and scrap brokerage and processing businesses provides Nucor with significant flexibility in optimizing our raw materials costs. Additionally, having a significant portion of our raw materials supply under our control reduces risk associated with the global sourcing of raw materials, particularly since a considerable portion of scrap substitutes comes from regions of the world that historically have experienced greater political turmoil.

Our highly variable, low-cost structure, combined with our financial strength and liquidity, have allowed us to successfully navigate cyclical, severely depressed steel industry market conditions in the past. In such times, our incentive-based pay system reduces our payroll costs, both hourly and salary, which helps to offset lower selling prices. Our pay-for-performance system that is closely tied to our levels of production also allows us to keep our highly experienced workforce intact and to continue operating our facilities when some of our competitors with greater fixed costs are forced to shut down some of their facilities. Because we use EAFs to produce our steel, we can easily vary our production levels to match short-term changes in demand, unlike our blast furnace-based integrated competitors. We believe these strengths also provide us further opportunities to gain market share during such times.

Evaluating Our Operating Performance

We report our results of operations in three segments: steel mills, steel products and raw materials. Most of the steel we produce in our mills is sold to outside customers (79% in 2021 and 80% in 2020), but a significant percentage is used internally by many of the facilities in our steel products segment (21% in 2021 and 20% in 2020).

We begin measuring our performance by comparing our net sales, both in total and by individual segment, during a reporting period with our net sales in the corresponding period in the prior year. In doing so, we focus on changes in and the reasons for such changes in the two key variables that have the greatest influence on our net sales: average sales price per ton during the period and total tons shipped to outside customers.

We also focus on both dollar and percentage changes in gross margins, which are key drivers of our profitability, and the reasons for such changes. There are many factors from period to period that can affect our gross margins. One consistent area of focus for us is changes in "metal margins," which is the difference between the selling price of steel and the cost of scrap and scrap substitutes. Increases or decreases in the cost of scrap and scrap substitutes that are not offset by changes in the selling price of steel can quickly compress or expand our margins and reduce or increase our profitability.

Changes in marketing, administrative and other expenses, particularly profit sharing and other variable incentive-based payment costs, can have a material effect on our results of operations for a reporting period as well. These costs vary significantly from period to period as they are based upon changes in our pre-tax earnings and other profitability metrics that are a reflection of our pay-for-performance system that is closely tied to our levels of production.

Evaluating Our Financial Condition

We evaluate our financial condition each reporting period by focusing primarily on the amounts of and reasons for changes in cash provided by operating activities, our current ratio, the turnover rate of our accounts receivable and inventories, the amounts of and reasons for changes in cash used in or provided by investing activities (including projected capital expenditures) and financing activities and our cash and cash equivalents and short-term investments position at period end. We believe that our conservative financial practices have served us well in the past and are serving us well today. As a result, our financial position remains strong.

Comparison of 2021 to 2020

Results of Operations

Nucor reported consolidated net earnings of \$6.83 billion, or \$23.16 per diluted share, in 2021, making it by far the most profitable year in the Company's history. This record year more than doubled the previous record for consolidated net earnings, which was \$2.36 billion set in 2018, and more than tripled the previous record for diluted earnings per share, which was \$7.42 per diluted share that was also set in 2018. By comparison, Nucor reported consolidated net earnings of \$721.5 million, or \$2.36 per diluted share, in 2020.

All three of Nucor's operating segments reported very strong profitable in 2021. The steel mills segment operated at a 94% average utilization rate in 2021, as end-use market demand remained very strong throughout the year. Higher volumes, combined with increases in average selling prices that outpaced increases in the average cost of scrap and scrap substitutes, resulted in robust metal margins and record profits for the steel mills segment in 2021.

The steel products segment also had its most profitable year in 2021, surpassing its previous record that was set in 2020. This record performance was due to the continued strong demand in nonresidential construction markets. Most of the businesses within the steel products segment had increased profitability in 2021 compared to 2020, with the biggest increases coming from our joist, deck and tubular products businesses.

The raw materials segment also had its most profitable year in 2021 and was significantly increased from 2020. DJJ's scrap brokerage and processing operations benefited from higher average selling prices and volumes. Our DRI facilities had a strong year of profitability in 2021, particularly in the first half of the year due to rising raw material prices. As the year progressed, the DRI facilities' profitability waned as the cost of consumed iron ore increased and selling prices for scrap substitutes began to decrease.

The following discussion will provide greater quantitative and qualitative analysis of Nucor's performance in 2021 as compared to 2020.

Net Sales

Net sales to external customers by segment for the years ended December 31, 2021 and 2020 were as follows (in thousands):

	Year Ended D		
	2021	2020	% Change
Steel mills	\$24,145,396	\$12,109,307	99%
Steel products	9,727,943	6,623,068	47%
Raw materials	2,610,600	1,407,283	86%
Total net sales to external customers	\$36,483,939	\$20,139,658	81%

Net sales for 2021 increased 81% from the prior year. Average sales price per ton increased 64% from \$789 in 2020 to \$1,292 in 2021. Total tons shipped to outside customers increased 11% from 25,519,000 tons in 2020 to 28,247,000 tons in 2021.

In the steel mills segment, sales tons for the years ended December 31, 2021 and 2020 were as follows (in thousands):

	Year Ended D	Year Ended December 31,		
	2021	2020	% Change	
Outside steel shipments	20,296	18,049	12%	
Inside steel shipments	5,394	4,637	16%	
Total steel shipments	25,690	22,686	13%	

Net sales for the steel mills segment increased 99% in 2021 from the prior year due to a 78% increase in the average sales price per ton, from \$671 in 2020 to \$1,195 in 2021, as well as a 12% increase in tons sold to outside customers. Average selling prices for our sheet, bar, structural and plate mills increased substantially in 2021 as compared to 2020.

Outside sales tonnage for the steel products segment for the years ended December 31, 2021 and 2020 was as follows (in thousands):

	Year Ended D		
	2021	2020	% Change
Joist sales	702	557	26%
Deck sales	536	496	8%
Cold finished sales	495	406	22%
Rebar fabrication sales	1,232	1,232	-
Piling products sales	554	649	-15%
Tubular products sales	1,013	1,080	-6%
Other steel products sales	447	374	20%
Total steel products sales	4,979	4,794	4%

Net sales for the steel products segment increased 47% in 2021 from the prior year due to a 41% increase in the average sales price per ton, from \$1,382 in 2020 to \$1,954 in 2021, as well as a 4% increase in volumes.

Net sales for the raw materials segment increased 86% in 2021 from the prior year primarily due to increased average selling prices and volumes at DJJ's brokerage and scrap processing operations. In 2021, approximately 90% of outside sales for the raw materials segment were from the brokerage operations of DJJ, and approximately 8% of outside sales were from the scrap processing operations of DJJ (88% and 9%, respectively, in 2020).

Gross Margins

In 2021, Nucor recorded gross margins of \$11.03 billion (30%), which was a substantial increase from \$2.23 billion (11%) in 2020:

- The primary driver for the increase in gross margins in 2021 as compared to 2020 was the significant increase in metal margins in the steel mills segment. Metal margin is the difference between the selling price of steel and the cost of scrap and scrap substitutes. The average scrap and scrap substitute cost per gross ton used increased 62% from \$290 in 2020 to \$469 in 2021. Despite the increase in average scrap and scrap substitute cost per gross ton used, metal margin in the steel mills segment increased due to higher average selling prices and volumes.
 - Scrap prices are driven by the global supply and demand for scrap and other iron-based raw materials used to make steel. Scrap prices increased during most of 2021, but began to decline late in the year. We are seeing the trend of lower scrap prices as we begin 2022.
- Gross margins in the steel products segment in 2021 increased significantly as compared to 2020, primarily due to strong demand in nonresidential construction markets and the aforementioned increases in average selling prices. The majority of the businesses within the steel products segment had increased profitability in 2021 as compared to 2020, most notably at our joist, deck and tubular products businesses. Partially offsetting these increases in profitability was the decreased profitability of our rebar fabrication businesses, which had a strong year of profitability in 2020.

- Gross margins in the raw materials segment significantly increased in 2021 as compared to 2020 due to the significant increase in raw materials selling prices that resulted in improved profitability for our DRI facilities and DJJ's brokerage and scrap processing operations.
- Pre-operating and start-up costs of new facilities increased to approximately \$130 million in 2021 as compared to approximately \$101 million in 2020. Pre-operating and start-up costs in 2021 primarily related to the sheet mill expansion in Kentucky, the plate mill being built in Kentucky and the galvanizing line at our sheet mill in Arkansas. In 2020, pre-operating and start-up costs primarily related to the bar mills being built in Missouri and Florida, the plate mill being built in Kentucky, the sheet mill expansion in Kentucky and the merchant bar quality mill expansion at our bar mill in Illinois. Nucor defines pre-operating and start-up costs, all of which are expensed, as the losses attributable to facilities or major projects that are either under construction or in the early stages of operation. Once these facilities or projects have attained a utilization rate that is consistent with our similar operating facilities, they are no longer considered by Nucor to be in start-up.

Marketing, Administrative and Other Expenses

A major component of marketing, administrative and other expenses is profit sharing and other incentive compensation costs. These costs, which are based upon and fluctuate with Nucor's financial performance, increased from 2020 to 2021 due to the increased profitability of the Company. In 2021, profit sharing costs consisted of \$869.9 million of contributions, including the Company's matching contribution, made to the Company's Profit Sharing and Retirement Savings Plan for qualified employees (\$86.6 million in 2020). Other employee bonus costs also fluctuate based on Nucor's achievement of certain financial performance goals, including achieving record earnings, and comparisons of Nucor's financial performance to peers in the steel industry and other companies. Stock-based compensation included in marketing, administrative and other expenses increased by 111% to \$61.7 million in 2021 compared with \$29.2 million in 2020 and includes costs associated with vesting of stock awards granted in prior years.

Included in marketing, administrative and other expenses in 2020 was \$18.2 million of restructuring charges related to the realignment of Nucor's metal buildings business in the steel products segment.

Equity in (Earnings) Losses of Unconsolidated Affiliates

Equity in (earnings) losses of unconsolidated affiliates was (\$103.1) million in 2021 and \$10.5 million in 2020. The improvement in equity method investment earnings from 2020 to 2021 was primarily due to the increased results of NuMit and Nucor-JFE.

Losses and Impairments of Assets

In 2020, Nucor recorded losses on assets of \$483.5 million related to our equity method investment in Duferdofin Nucor S.r.I. ("Duferdofin Nucor"). Nucor also recorded impairment charges in 2020 of \$103.2 million related to certain inventory and long-lived assets in the steel mills segment, and \$27.0 million related to the write-down of our unproved natural gas well assets included in the raw materials segment.

During 2021, Nucor recorded a non-cash loss on assets of \$42.0 million related to our leasehold interest in unproved oil and natural gas properties in the raw materials segment. Also included in the 2021 results were losses on assets of \$20.2 million in the steel products segment.

Interest Expense (Income)

Net interest expense for the years ended December 31, 2021 and 2020 was as follows (in thousands):

	Year Ended I	Year Ended December 31,		
	2021	2020		
Interest expense	\$ 163,121	\$ 166,6	313	
Interest income	(4,267)	(13,4	15)	
Interest expense, net	\$ 158,854	\$ 153,19	98	

Interest expense decreased in 2021 compared to 2020 due to lower average interest rates on debt and an increase in capital interest. Interest income decreased in 2021 compared to 2020 due to a decrease in average interest rates on investments.

Earnings Before Income Taxes and Noncontrolling Interests

The following table presents earnings before income taxes and noncontrolling interests by segment for the years ended December 31, 2021 and 2020 (in thousands). The changes between periods were driven by the quantitative and qualitative factors previously discussed.

	Year Ended December 31,			
		2021		2020
Steel mills	\$	9,735,020	\$	720,151
Steel products		1,291,450		690,547
Raw materials		549,956		23,621
Corporate/eliminations		(2,375,568)		(598,781)
Earnings before income taxes and noncontrolling interests	\$	9,200,858	\$	835,538

Noncontrolling Interests

Noncontrolling interests represent the income attributable to the noncontrolling partners of Nucor's joint ventures, primarily Nucor–Yamato, of which Nucor owns 51%. The 157% increase in earnings attributable to noncontrolling interests in 2021 as compared to 2020 was primarily due to the increased earnings of Nucor–Yamato. Driving the significant increase in earnings at Nucor-Yamato in 2021 was higher average selling prices, volumes and metal margins. Under the Nucor–Yamato limited partnership agreement, the minimum amount of cash to be distributed each year to the partners is the amount needed by each partner to pay applicable U.S. federal and state income taxes. In 2020, the amount of cash distributed to noncontrolling interest holders was more than the earnings attributable to noncontrolling interests based on mutual agreement of the general partners; however, the cumulative amount of cash distributed to partners was less than the cumulative net earnings of the partnership.

Provision for Income Taxes

The Company's effective tax rate in 2021 was 22.59% compared with -0.06% in 2020. The 2020 effective rate included a net tax benefit of \$201.9 million (-24.16%) for a tax loss on our investment in Duferdofin Nucor, a net tax benefit of \$45.2 million (-5.41%) for state tax credits, and a federal tax benefit of \$48.2 million (-5.77%) for the carryback of a federal tax net operating loss (an "NOL") under the Coronavirus Aid, Relief, and Economic Security Act (the "CARES Act"). These benefits were all recognized in 2020 and were partially offset by the rate impact (11.2%) of financial statement impairments of \$445.6 million which did not affect the provision for income taxes. The CARES Act allowed for an NOL generated in 2020 to be carried back to taxable years where the federal income tax rate was 35%. The difference in the tax rate in 2020 and tax years before the enactment of the Tax Cuts and Jobs Act of 2017 is the main driver of the federal tax NOL benefit in 2020, but this was partially offset by the partial loss of the domestic manufacturing deduction in the carryback year.

Nucor has concluded U.S. federal income tax matters for tax years through 2014 and for tax year 2016. The tax years 2015 and 2017 through 2020 remain open to examination by the Internal Revenue Service. The 2015 Canadian income tax returns for Harris Steel Group Inc. and certain related affiliates are currently under examination by the Canada Revenue Agency. The tax years 2015 through 2020 remain open to examination by other major taxing jurisdictions to which Nucor is subject (primarily Canada and other state and local jurisdictions).

Net Earnings and Return on Equity

Nucor reported net earnings of \$6.83 billion, or \$23.16 per diluted share, in 2021, compared to net earnings of \$721.5 million, or \$2.36 per diluted share, in 2020. Net earnings attributable to Nucor stockholders as a percentage of net sales were 18.7% and 3.6% in 2021 and 2020, respectively. Return on average stockholders' equity was 55.0% and 6.8% in 2021 and 2020, respectively.

Liquidity and Capital Resources

We believe our financial strength is a key strategic advantage among domestic steel producers, particularly during recessionary business cycles. We carry the highest credit ratings of any steel producer headquartered in North America, with an A- long-term rating from Standard and Poor's and a Baa1 long-term rating from Moody's. Our credit ratings are dependent, however, on many factors, both qualitative and quantitative, and are subject to change at any time. The disclosure of our credit ratings is made to enhance investors' understanding of our sources of liquidity and the impact of our credit ratings on our cost of funds.

Nucor's cash and cash equivalents, short-term investments and restricted cash and cash equivalents position remained strong at \$2.76 billion as of December 31, 2021, compared with \$3.16 billion as of December 31, 2020. Approximately \$540.3 million and \$316.0 million of the cash and cash equivalents position as of December 31, 2021 and 2020, respectively, was held by our majority-owned joint ventures. Cash flows provided by operating activities provide us with a significant source of liquidity. When needed, we have external short-term financing sources available, including the issuance of commercial paper and borrowings under our bank credit facilities.

We also issue long-term debt securities from time-to-time. In August 2021, Nucor became an obligor with respect to \$197.0 million in 40-year variable-rate Green Bonds to partially fund the capital costs, in particular the expenditures associated with pollution prevention and control (including waste recycling and waste reduction), of the construction of our plate mill located in Brandenburg, Kentucky. Proceeds of the Green Bonds are held on Nucor's balance sheet as restricted cash and cash equivalents until they are utilized in connection with the construction of the Brandenburg facility.

On November 5, 2021, Nucor completed an offer to exchange its existing 2.979% Notes due 2055 (the "2055 Notes") that were not registered under the Securities Act of 1933, as amended (the "Securities Act") for a like principal amount of notes having terms substantially identical as the 2055 Notes and that are registered under the Securities Act.

In November 2021, Nucor amended and restated its revolving credit facility to increase the borrowing capacity from \$1.50 billion to \$1.75 billion and to extend its maturity date to November 5, 2026. Our revolving credit facility remains undrawn.

We expect to continue to have adequate access to the capital markets at a reasonable cost of funds for liquidity purposes when needed.

Selected Measures of Liquidity and Capital Resources

	(Dollars in thousands)				
	December 31,				
		2021		2020	
Cash and cash equivalents	\$	2,364,858	\$	2,639,671	
Short-term investments		253,005		408,004	
Restricted cash and cash equivalents		143,800		115,258	
Working capital		7,642,144		6,860,802	
Current ratio		2.5		3.6	

The current ratio, which is calculated by dividing current assets by current liabilities, was 2.5 at year-end 2021 compared with 3.6 at year-end 2020. The current ratio was impacted by higher salaries, wages and related accruals for incentive compensation during a period of record operating profits. In addition, \$600.0 million aggregate principal amount of our long-term debt outstanding will become due in September 2022 and was reclassified as a current maturity as of year-end 2021.

In 2021, total accounts receivable turned approximately every four weeks and inventories turned approximately every 10 weeks. These ratios compare with accounts receivable turnover of approximately every six weeks and inventory turnover of approximately every 11 weeks for 2020.

Funds provided by operations, cash and cash equivalents, short-term investments, restricted cash and cash equivalents and new borrowings under existing credit facilities are expected to be adequate to meet future capital expenditures, current debt maturities and working capital requirements for existing operations for at least the next 24 months. We also believe we have adequate access to capital markets for liquidity purposes. In September 2022, \$600.0 million aggregate principal amount of our outstanding 4.125% Notes due 2022 will mature, and in August 2023, \$500.0 million aggregate principal amount of our 4.000% Notes due 2023 will mature.

Off-Balance Sheet Arrangements

We have a simple capital structure with no off-balance sheet arrangements or relationships with unconsolidated special purpose entities that we believe could have a material impact on our financial condition or liquidity.

Capital Allocation Strategy

We believe that our conservative financial practices have served us well in the past and are serving us well today. Nucor's financial strength allows for a consistent, balanced approach to capital allocation throughout the business cycle. Nucor's highest capital allocation priority is to invest in our business for profitable growth over the long term. We have historically done this by investing to optimize our existing operations, initiate greenfield expansions and make acquisitions. Our second priority is to return capital to our stockholders through cash dividends and share repurchases. We intend to return a minimum of 40% of our net earnings to our stockholders, while maintaining a debt-to-capital ratio that supports a strong investment grade credit rating. The Company repurchased approximately \$3.28 billion of shares of its common stock in 2021 (approximately \$39.5 million in 2020 and \$298.5 million in 2019).

Operating Activities

Cash provided by operating activities was \$6.23 billion in 2021 as compared to \$2.70 billion in 2020. This increase of \$3.53 billion was primarily driven by an increase in net earnings of \$6.29 billion over the prior year, which included \$62.2 million of non-cash losses and impairments of assets (\$613.6 million of non-cash losses and impairments of assets in 2020). These increases were partially offset by the changes in operating assets and liabilities resulting in a net outflow of \$1.86 billion in 2021 as compared to a net inflow of \$204 million in 2020. The changes in working capital were primarily due to increases in inventory and accounts receivable from year-end 2020 to the end of 2021 as compared to the same prior year period, offset by increases in salaries, wages and related accruals, federal income taxes and accounts payable. Accounts receivable at the end of 2021 increased from the prior year-end resulting in a cash outflow of \$1.39 billion due to a 100% increase in composite sales price (in 2020, accounts receivable increased from the prior year-end by a lesser amount for an outflow of only \$129.3 million). From year-end 2020 to year-end 2021, inventories increased resulting in an outflow of \$2.31 billion due to a 19% increase in inventory tons and a 47% increase in average scrap and scrap substitutes cost per ton in inventory. This compares to inventories at year-end 2020 decreasing from year-end 2019 and resulting in a \$284.1 million cash inflow. Salaries, wages and related accruals increased due to higher current year profit sharing and incentive compensation accruals due to record operating profits. Federal income taxes also increased due to the increased profitability of the Company and accounts payable increased due to the increases in inventory mentioned previously.

Investing Activities

Our business is capital intensive; therefore, cash used in investing activities primarily represents capital expenditures for the construction of new facilities, the expansion and upgrading of existing facilities and the acquisition of other companies. Cash used in investing activities in 2021 was \$2.87 billion as compared to \$1.76 billion in 2020. The increase in cash used in investing activities was primarily due to a \$1.34 billion increase in cash used to fund acquisitions, mainly the August 2021 purchases of the IMP business of Cornerstone and the steel racking solutions business from Hannibal. Cash used for capital expenditures increased by \$78.8 million to \$1.62 billion in 2021 as compared to \$1.54 billion in 2020. The primary drivers of capital expenditures were related to the sheet mill expansion at Nucor Steel Gallatin, the flex galvanizing line at Nucor Steel Arkansas, and the new plate mill in Brandenburg, Kentucky. The increases in cash used in investing activities in 2021 was partially offset by an increase in proceeds from the sale of investments of \$648.9 million in 2021 as compared to \$392.2 million in 2020.

Financing Activities

Cash used in financing activities during 2021 was \$3.60 billion as compared to cash provided by financing activities of \$285.9 million in 2020. The largest driver of this change was the \$3.28 billion of stock repurchases in 2021 as compared to \$39.5 million in the prior year. This was partially offset primarily by a decrease in proceeds from the issuance of long-term debt of approximately \$1.00 billion (proceeds of \$197.0 million in 2021 related to the issuance of additional 40-year variable-rate Green Bonds as compared to aggregate issuances of \$1.24 billion in 2020).

Our revolving credit facility is undrawn and was amended and restated in November 2021 to increase the borrowing capacity from \$1.50 billion to \$1.75 billion and to extend the maturity date to November 5, 2026. The revolving credit facility includes only one financial covenant, which is a limit of 60% on the ratio of funded debt to total capital. In addition, the undrawn revolving credit facility contains customary non-financial covenants, including a limit on Nucor's ability to pledge the Company's assets and a limit on consolidations, mergers and sales of assets. As of December 31, 2021, Nucor's funded debt to total capital ratio was 28%, and Nucor was in compliance with all covenants under the credit facility.

Market Risk

Nucor's largest exposure to market risk is in our steel mills and steel products segments. Our utilization rates for the steel mills and steel products facilities for the fourth quarter of 2021 were 89% and 71%, respectively. A significant portion of our steel mills and steel products segments' sales are into the commercial, industrial and municipal construction markets. Our largest single customer in 2021 represented just 5% of sales and consistently pays within terms. In the raw materials segment, we are exposed to price fluctuations related to the purchase of scrap steel, pig iron and iron ore. Our exposure to market risk is mitigated by the fact that our steel mills use a significant portion of the products of this segment and the prices we receive for our steel and steel products tend to be correlated with the prices we pay for these materials.

Nucor's tax-exempt industrial development revenue bonds ("IDRBs") have variable interest rates that are adjusted weekly. These IDRBs represented 24% of Nucor's long-term debt outstanding at December 31, 2021. The remaining 76% of Nucor's long-term debt is at fixed rates. Future changes in interest rates are not expected to significantly impact earnings. From time to time, Nucor makes use of interest rate swaps to manage interest rate risk. As of December 31, 2021, there were no such contracts outstanding. Nucor's investment practice is to invest in securities that are highly liquid with short maturities. As a result, we do not expect changes in interest rates to have a significant impact on the value of our investment securities recorded as short-term investments.

Nucor also uses derivative financial instruments from time to time to partially manage its exposure to price risk related to purchases of natural gas used in the production process, as well as scrap, copper and aluminum purchased for resale to its customers. In addition, Nucor uses forward foreign exchange contracts from time to time to hedge cash flows associated with certain assets and liabilities, firm commitments and anticipated transactions. Nucor generally does not enter into derivative instruments for any purpose other than hedging the cash flows associated with specific volumes of commodities that will be purchased and processed or sold in future periods and hedging the exposures related to changes in the fair value of outstanding fixed-rate debt instruments and foreign currency transactions. Nucor recognizes all derivative instruments in the consolidated balance sheets at fair value.

The Company is exposed to foreign currency risk primarily through its operations in Canada, Europe and Mexico. We periodically use derivative contracts to mitigate the risk of currency fluctuations.

Dividends

Nucor has increased its base cash dividend every year since it began paying dividends in 1973. Nucor paid dividends of \$1.62 per share in 2021, compared with \$1.61 per share in 2020. In December 2021, the Board of Directors increased the regular quarterly cash dividend on Nucor's common stock to \$0.50 per share. Nucor returned approximately \$3.76 billion in capital to its stockholders in the form of base dividends and share repurchases in 2021. In February 2022, the Board of Directors declared Nucor's 196th consecutive quarterly cash dividend of \$0.50 per share payable on May 11, 2022 to stockholders of record as of March 31, 2022.

Contractual Obligations and Other Commercial Commitments

The following table sets forth our contractual obligations and other commercial commitments as of December 31, 2021 for the periods presented (in thousands):

	Payments Due By Period					
Contractual Obligations	Total	2022	2023-2024	2025-2026	2027 and thereafter	
Long-term debt	\$ 5,600,230	\$ 601,000	\$ 500,000	\$ 521,500	\$3,977,730	
Estimated interest on long-term						
debt (1)	2,119,548	162,448	261,578	234,093	1,461,429	
Finance leases	277,177	26,448	45,976	36,132	168,621	
Operating leases	112,696	22,675	40,017	24,270	25,734	
Raw material purchase						
commitments (2)	3,564,615	1,896,706	965,272	212,049	490,588	
Utility purchase commitments (2)	788,701	300,228	224,293	115,428	148,752	
Other unconditional purchase						
obligations (3)	798,799	769,076	19,801	6,368	3,554	
Other long-term obligations (4)	879,795	587,390	108,772	7,149	176,484	
Total contractual obligations	\$14,141,561	\$4,365,971	\$2,165,709	\$1,156,989	\$6,452,892	

- (1) Interest is estimated using applicable rates at December 31, 2021 for Nucor's outstanding fixed-rate and variable-rate debt.
- (2) Nucor enters into contracts for the purchase of scrap and scrap substitutes, iron ore, electricity, natural gas, and other raw materials and related services. These contracts include multi-year commitments and minimum annual purchase requirements and are valued at prices in effect on December 31, 2021, or according to the contract language. These contracts are part of normal operations and are reflected in historical operating cash flow trends. We do not believe such commitments will adversely affect our liquidity position.
- (3) Purchase obligations include commitments for capital expenditures on operating machinery and equipment. In addition, during the first quarter of 2022, Nucor entered into purchase obligations totaling approximately \$1.10 billion related to previously announced capital projects.
- (4) Other long-term obligations include amounts associated with Nucor's early-retiree medical benefits, management compensation and quarantees.

Note: In addition to the amounts shown in the table above, \$95.1 million of unrecognized tax benefits have been recorded as liabilities, and we are uncertain as to if or when such amounts may be settled. Related to these unrecognized tax benefits, we have also recorded a liability for potential penalties and interest of \$17.5 million at December 31. 2021.

Outlook

In 2022, we expect to continue to take advantage of our position of strength to grow Nucor's long-term earnings power and stockholder value by continuing to execute on our balanced capital allocation framework and successfully focusing on profitable growth strategies. We have invested significant capital over a broad range of strategic acquisitions and investments that we believe will further enhance our ability to: grow Nucor's long-term earnings power by increasing our channels to market, expanding our product portfolios into higher value-added offerings that are less vulnerable to imports, improving our cost structure, and further building upon our market leadership positions and further enhance our commercial excellence. We are utilizing Nucor's financial strength to execute on investment opportunities to further grow our long-term earnings capacity.

End-use market demand remains strong for steel and steel products, and we anticipate that 2022 will be another year of strong profitability for Nucor. We expect consolidated net earnings attributable to Nucor stockholders in the first quarter of 2022 will be slightly reduced from the record results of the fourth quarter of 2021. Diluted earnings per share for first quarter of 2022 should benefit from lower weighted average shares outstanding.

Steel mill segment earnings are expected to decline in the first quarter of 2022 due to decreased profitability of our sheet mills. The steel products segment is expected to achieve further margin expansion and profitability in the first quarter of 2022 as backlog pricing has improved reflecting higher steel costs. Earnings of the raw materials segment are expected to improve slightly in the first quarter of 2022 as compared to the fourth quarter of 2021 due to the improved profitability of our DRI facilities, partially offset by the impact of lower scrap prices on our scrap brokerage and processing operations.

We are ever mindful of the threat of increases in imported steel stemming from the still significant excess foreign steel capacity. Over the past decade, the steel industry has won several important trade cases that addressed unfairly traded imports.

We are committed to executing on the opportunities we see ahead to reward Nucor stockholders with very attractive long-term returns on their valuable capital invested in our company. Our industry-leading financial strength allows us to support investments in our facilities that we believe will enable us to generate increased profitability. Capital expenditures are currently projected to be approximately \$2.3 billion in 2022 and, as we have in our past, we will allocate capital to investments that we believe will build our long-term earnings power.

Critical Accounting Policies and Estimates

Our discussion and analysis of our financial condition and results of operations are based upon our consolidated financial statements, which have been prepared in conformity with generally accepted accounting principles in the United States of America. The preparation of these consolidated financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at year end and the reported amount of revenues and expenses during the year. On an ongoing basis, we evaluate our estimates, including those related to the valuation allowances for receivables, the carrying value of non-current assets and reserves for environmental obligations and income taxes. Our estimates are based on historical experience and various other assumptions that we believe to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Accordingly, actual costs could differ materially from these estimates under different assumptions or conditions. We believe the following critical accounting policies affect our significant judgments and estimates used in the preparation of our consolidated financial statements.

Inventories

Inventories are stated at the lower of cost or net realizable value. The Company records any amount required to reduce the carrying value of inventory to net realizable value as a charge to cost of products sold. Scrap and scrap substitute costs are a very significant component of the raw material, semi-finished and finished product inventory balances. The vast majority of the Company's inventory is recorded on the first-in, first-out method. Production costs are applied to semi-finished and finished product inventory from the approximate period in which they are produced.

Long-Lived Asset Impairments

We evaluate our property, plant and equipment and finite-lived intangible assets for potential impairment on an individual asset basis or at the lowest level asset grouping for which cash flows can be independently identified. Asset impairments are assessed whenever circumstances indicate that the carrying amounts of those productive assets could exceed their projected undiscounted cash flows. In developing estimated values for assets that we currently use in our operations, we utilize judgments and assumptions of future undiscounted cash flows that the assets will produce. When it is determined that an impairment exists, the related assets are written down to estimated fair market value. Management determined that no long-lived asset impairment testing was required in 2021.

Certain long-lived asset groupings were tested for impairment during the fourth quarter of 2020. Undiscounted cash flows for each asset grouping were estimated using management's long-range estimates of market conditions associated with each asset grouping over the estimated useful life of the principal asset within the group. Our undiscounted cash flow analysis indicated that, other than the groupings discussed below, the tested long-lived asset groupings were recoverable as of December 31, 2020.

Steel Mills Segment Asset Impairments

In 2019, Nucor recorded a non-cash impairment charge of \$20.0 million related to certain property, plant and equipment at our plate mill in Texas. This charge is included in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2019.

In 2020, Nucor recorded non-cash impairment charges totaling \$103.2 million related to certain inventory and long-lived assets, which primarily related to our Castrip sheet mill operations. Due to the advancements in the capabilities at our new cold mill and galvanizing line we have under construction at Nucor Steel Arkansas, we believe the value of the technology and process has diminished for Nucor. As such, the existing Castrip assets are not expected to be materially utilized going forward. These charges are included in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2020.

Raw Materials Segment Asset Impairments

In the fourth quarter of 2019, due to the deteriorating natural gas pricing environment at our sales point in the Piceance Basin as well as the decreased performance of the natural gas well assets, Nucor determined a triggering event had occurred and performed an impairment analysis on all three fields of wells. As a result of the fourth quarter of 2019 analysis, a \$35.0 million non-cash impairment charge was recorded on one field of wells. An increase in the estimated lease operating cost projections was the primary factor in causing this field of wells to be impaired. The non-cash impairment charge is included in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2019.

One of the primary assumptions that affects the undiscounted cash flows determination is management's estimate of future pricing of natural gas and natural gas liquids. The pricing used in the impairment assessments was developed by management based on projected natural gas market supply and demand dynamics, in conjunction with a review of projections by market analysts. Management also makes estimates on the expected reserve levels and on the expected lease operating costs. The impairment assessments were performed on each of Nucor's three fields of wells, with each field defined by common geographic location. The combined carrying value of the three fields of wells was \$65.2 million at December 31, 2021 (\$71.7 million at December 31, 2020).

Changes in the natural gas industry or a prolonged low-price environment beyond what had already been assumed in the assessments could cause management to revise the natural gas and natural gas liquids price assumptions, the estimated reserves or the estimated lease operating costs. Unfavorable revisions to these assumptions or estimates could possibly result in further impairment of some or all of the fields of proved well assets.

In 2020, regulatory authorities in Colorado adopted new rules that became effective January 2021. One of these rules increases drilling setback distances. In the fourth quarter of 2020, Nucor determined a triggering event had occurred, as we do not expect to be able to access the full extent of the resources in the ground, and performed an impairment analysis. As a result, Nucor recorded a \$27.0 million non-cash impairment charge related to the write-down of our leasehold interest in unproved oil and gas properties. This charge is included in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2020.

In the second quarter of 2021, Nucor decided that it would not develop a portion of its unproved oil and natural gas properties ("Portion A") within the contractually specified time period related to Portion A. As a result of this decision, the Company will forfeit its leasehold rights for Portion A. The Company recorded a charge of \$42.0 million to write off the value of Portion A that is included in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2021. The decision not to develop Portion A was heavily influenced by the approaching deadline to commence development combined with Portion A's expected near-term profitability not achieving management's desired returns relative to the cost of development. A significant portion of the Company's remaining leasehold interest in unproved oil and natural gas properties are held by production. Accordingly, management does not believe the value assigned to those portions needs to be evaluated at this time. The carrying value of the remaining portions of unproved oil and natural gas properties was \$96.0 million at December 31, 2021.

Goodwill and Intangibles

Goodwill is tested annually for impairment and whenever events or circumstances change that would make it more likely than not that an impairment may have occurred. We perform our annual impairment analysis as of the first day of the fourth quarter each year. The evaluation of impairment involves comparing the current estimated fair value of each reporting unit to the recorded value, including goodwill.

When appropriate, Nucor performs a qualitative assessment to determine whether it is more likely than not that the fair value of a reporting unit is less than its carrying amount. For certain reporting units, it is necessary to perform a quantitative analysis. In these instances, a discounted cash flow model is used to determine the current estimated fair value of these reporting units. Significant assumptions used to determine the fair value of each reporting unit as part of our annual testing (and any required interim testing) include: (i) expected cash flow for the five-year period following the testing date (including market share, sales volumes and prices, raw materials and other costs to produce and estimated capital needs); (ii) an estimated terminal value using a terminal year growth rate determined based on the growth prospects of the reporting unit; (iii) a discount rate based on management's best estimate of the after-tax weighted-average cost of capital; and (iv) a probability-weighted scenario approach by which varying cash flows are assigned to certain scenarios based on the likelihood of occurrence. Management considers historical and anticipated future results, general economic and market conditions, the impact of planned business and operational strategies and all available information at the time the fair values of its reporting units are estimated. Those estimates and judgments may or may not ultimately prove appropriate.

Our fourth quarter 2021 annual goodwill impairment analysis did not result in an impairment charge. Management does not believe that future impairment of these reporting units is probable. However, the performance of certain businesses that comprise our reporting units requires continued improvement. An increase of approximately 50 basis points in the discount rate, a critical assumption in which a minor change can have a significant impact on the estimated fair value, would not result in an impairment charge. See Note 8 to the Company's consolidated financial statements for further discussion of the results of the Company's 2021 annual goodwill impairment analysis.

Nucor will continue to monitor operating results within all reporting units throughout 2022 in an effort to determine if events and circumstances warrant further interim impairment testing. Otherwise, all reporting units will again be subject to the required annual qualitative and/or quantitative impairment test during our fourth quarter of 2022. Changes in the judgments and estimates underlying our analysis of goodwill for possible impairment, including expected future operating cash flows and discount rate, could decrease the estimated fair value of our reporting units in the future and could result in an impairment of goodwill.

Equity Method Investments

Investments in joint ventures in which Nucor shares control over the financial and operating decisions but in which Nucor is not the primary beneficiary are accounted for under the equity method. Each of the Company's equity method investments is subject to a review for impairment if, and when, circumstances indicate that a decline in value below its carrying amount may have occurred. Examples of such circumstances include, but are not limited to, a significant deterioration in the earnings performance or business prospects of the investee; missed financial projections; a significant adverse change in the regulatory, tax, economic or technological environment of the investee; a significant adverse change in the general market condition of either the geographic area or the industry in which the investee operates; and recurring negative cash flows from operations. When management considers the decline to be other than temporary, the Company would write down the related investment to its estimated fair market value. An other-than-temporary decline in carrying value is determined to have occurred when, in management's judgment, a decline in fair value below carrying value is of such length of time and/or severity that it is considered long-term.

In the event that an impairment review is necessary, we calculate the estimated fair value of our equity method investments using a probability-weighted multiple-scenario income approach.

Management's analysis includes three discounted cash flow scenarios (best case, base case and recessionary case), which contain forecasted near-term cash flows under each scenario. Generally, (i) the best case scenario contains estimates of future results ranging from slightly higher than recent operating performance to levels that are consistent with historical operating and financial performance; (ii) the base case scenario contains estimates of future results ranging from generally in line with recent operating performance to levels that are more conservative than historical operating and financial performance; and (iii) the recessionary case scenario contains estimates of future results which include limited growth resulting only from operational cost improvements and limited benefits of new higher-value product offerings. Management determines the probability that each cash flow scenario will come to fruition based on the specific facts and circumstances of each of the preceding scenarios, with the base case typically receiving the majority of the weighting.

Key assumptions used to determine the fair value of our equity method investments include: (i) expected cash flow for the six-year period following the testing date (including market share, sales volumes and prices, costs to produce and estimated capital needs); (ii) an estimated terminal value using a terminal year growth rate determined based on the growth prospects of the investment; (iii) a discount rate based on management's best estimate of the after-tax weighted-average cost of capital; and (iv) a probability-weighted scenario approach by which varying cash flows are assigned to certain scenarios based on the likelihood of occurrence. While the assumptions that most significantly affect the fair value determination include projected revenues, metal margins and discount rate, the assumptions are often interdependent, and no single factor predominates in determining the estimated fair value. Management considers historical and anticipated future results, general economic and market conditions, the impact of planned business and operational strategies and all available information at the time the fair values of its investments are estimated. Those estimates and judgments may or may not ultimately prove appropriate.

Nucor determined that a triggering event occurred in the first quarter of 2020 with respect to its equity method investment in Duferdofin Nucor due to adverse developments in the joint venture's commercial outlook, which were exacerbated by the COVID-19 pandemic, all of which negatively impacted the joint venture's strategic direction. After completing its impairment assessment, Nucor determined that the carrying amount exceeded its estimated fair value and the impairment condition was considered to be other than temporary. Therefore, Nucor recorded a \$250.0 million impairment charge in the first quarter of 2020. The assumptions that most significantly affected the fair value determination included projected cash flows and the discount rate. The Company-specific inputs for measuring fair value are considered "Level 3" or unobservable inputs that are not corroborated by market data under applicable fair value authoritative guidance, as guoted market prices are not available.

Throughout 2020, additional capital contributions were made by the Company to Duferdofin Nucor that were immediately impaired. These additional capital contributions resulted in \$5.0 million, \$6.6 million and \$25.4 million impairment charges against our investment in Duferdofin Nucor in the second, third and fourth quarters of 2020, respectively. Also, in the fourth quarter of 2020, Nucor reclassified into earnings, \$158.6 million of cumulative foreign currency translation losses on our investment in Duferdofin Nucor. In 2020, total impairment charges, including the charge associated with forgiving and outstanding note receivable, related to our investment in Duferdofin Nucor were approximately \$483.5 million. These non-cash impairment charges are included in the steel mills segment and in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2020.

Income Taxes

We utilize the liability method of accounting for income taxes. Under the liability method, deferred taxes are determined based on the temporary differences between the financial statement and tax basis of assets and liabilities using tax rates expected to be in effect during the years in which the basis differences reverse. A valuation allowance is recorded when it is more likely than not that some of the deferred tax assets will not be realized. We recognize the effect of income tax positions only if those positions are more likely than not of being sustained. Potential accrued interest and penalties related to unrecognized tax benefits within operations are recognized as a component of interest expense and other expenses.

Cautionary Note Regarding Forward-Looking Statements

Certain statements made in this report, or in other public filings, press releases, or other written or oral communications made by Nucor, which are not historical facts are forward-looking statements subject to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. These forwardlooking statements involve risks and uncertainties which we expect will or may occur in the future and may impact our business, financial condition and results of operations. The words "anticipate," "believe," "expect," "intend," "project," "may," "will," "should," "could" and similar expressions are intended to identify those forward-looking statements. These forward-looking statements reflect the Company's best judgment based on current information, and, although we base these statements on circumstances that we believe to be reasonable when made, there can be no assurance that future events will not affect the accuracy of such forward-looking information. As such, the forward-looking statements are not guarantees of future performance, and actual results may vary materially from the projected results and expectations discussed in this report. Factors that might cause the Company's actual results to differ materially from those anticipated in forward-looking statements include, but are not limited to: (1) competitive pressure on sales and pricing, including pressure from imports and substitute materials; (2) U.S. and foreign trade policies affecting steel imports or exports; (3) the sensitivity of the results of our operations to prevailing market steel prices and changes in the supply and cost of raw materials, including pig iron, iron ore and scrap steel; (4) the availability and cost of electricity and natural gas which could negatively affect our cost of steel production or result in a delay or cancellation of existing or future drilling within our natural gas drilling programs; (5) critical equipment failures and business interruptions; (6) market demand for steel products, which, in the case of many of our products, is driven by the level of nonresidential construction activity in the United States; (7) impairment in the recorded value of inventory, equity investments, fixed assets, goodwill or other long-lived assets; (8) uncertainties surrounding the global economy, including excess world capacity for steel production, inflation and interest rate changes; (9) fluctuations in currency conversion rates; (10) significant changes in laws or government regulations affecting environmental compliance, including legislation and regulations that result in greater regulation of greenhouse gas emissions that could increase our energy costs, capital expenditures and operating costs or cause one or more of our permits to be revoked or make it more difficult to obtain permit modifications; (11) the cyclical nature of the steel industry; (12) capital investments and their impact on our performance; (13) our safety performance; (14) the impact of the COVID-19 pandemic and any variants of the virus; and (15) the risks discussed in "Item 1A. Risk Factors" of this report.

Caution should be taken not to place undue reliance on the forward-looking statements included in this report. We assume no obligation to update any forward-looking statements except as may be required by law. In evaluating forward-looking statements, these risks and uncertainties should be considered, together with the other risks described from time to time in our reports and other filings with the SEC.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

In the ordinary course of business, Nucor is exposed to a variety of market risks. We continually monitor these risks and develop strategies to manage them.

Interest Rate Risk – Nucor manages interest rate risk by using a combination of variable-rate and fixed-rate debt. At December 31, 2021, approximately 24% of Nucor's long-term debt was in industrial revenue bonds that have variable interest rates that are adjusted weekly. The remaining 76% of Nucor's long-term debt was at fixed rates. Future changes in interest rates are not expected to significantly impact earnings. Nucor also occasionally makes use of interest rate swaps to manage net exposure to interest rate changes. As of December 31, 2021, there were no such contracts outstanding. Nucor's investment practice is to invest in securities that are highly liquid with short maturities. As a result, we do not expect changes in interest rates to have a significant impact on the value of our investment securities recorded as short-term investments.

Commodity Price Risk – In the ordinary course of business, Nucor is exposed to market risk for price fluctuations of raw materials and energy, principally scrap steel, other ferrous and nonferrous metals, alloys and natural gas. We attempt to negotiate the best prices for our raw materials and energy requirements and to obtain prices for our steel products that match market price movements in response to supply and demand. In periods of strong or stable demand for our products, we are more likely to be able to effectively reduce the normal time lag in passing through higher raw material costs so that we can maintain our gross margins. When demand for our products is weaker, this becomes more challenging. Our DRI facilities in Trinidad and Louisiana provide us with flexibility in managing our input costs. DRI is particularly important for operational flexibility when demand for prime scrap increases due to increased domestic steel production.

Natural gas produced by Nucor's drilling operations is being sold to third parties to partially offset our exposure to changes in the price of natural gas consumed by our Louisiana DRI facility and our steel mills in the United States.

Nucor also periodically uses derivative financial instruments to hedge a portion of our exposure to price risk related to natural gas purchases used in the production process and to hedge a portion of our scrap, aluminum and copper purchases and sales. Gains and losses from derivatives designated as hedges are deferred in accumulated other comprehensive loss, net of income taxes on the consolidated balance sheets and recognized in net earnings in the same period as the underlying physical transaction. At December 31, 2021, accumulated other comprehensive loss, net of income taxes included \$1.1 million in unrealized net-of-tax gains for the fair value of these derivative instruments. Changes in the fair values of derivatives not designated as hedges are recognized in earnings each period. The following table presents the negative effect on pre-tax earnings of a hypothetical change in the fair value of the derivative instruments outstanding at December 31, 2021, due to an assumed 10% and 25% change in the market price of each of the indicated commodities (in thousands):

Commodity Derivative	10% 0	Change	25% Change
Natural gas	\$	19,288	48,221
Aluminum		7,249	18,122
Copper		4,081	10,204

Any resulting changes in fair value would be recorded as adjustments to accumulated other comprehensive loss, net of income taxes or recognized in net earnings, as appropriate. These hypothetical losses would be partially offset by the benefit of lower prices paid or higher prices received for the physical commodities.

Foreign Currency Risk – Nucor is exposed to foreign currency risk primarily through its operations in Canada, Europe and Mexico. We periodically use derivative contracts to mitigate the risk of currency fluctuations. Open foreign currency derivative contracts at December 31, 2021 and 2020 were insignificant.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Nucor's management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934, as amended.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management assessed the effectiveness of Nucor's internal control over financial reporting as of December 31, 2021. In making this assessment, management used criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in Internal Control – Integrated Framework (2013).

Our assessment did not include the internal controls over financial reporting of the insulated metal panels ("IMP") business of Cornerstone Building Brands, Inc. ("Cornerstone") and Hannibal Industries, Inc. ("Hannibal"), which were acquired on August 9, 2021 and August 20, 2021, respectively. Total assets (excluding goodwill and intangible assets, which are included within the scope of our assessment) and total revenues of these combined acquisitions collectively represent 2.67% and 1.12%, respectively, of the related consolidated financial statement amounts as of and for the fiscal year ended December 31, 2021.

Based on its assessment, management concluded that Nucor's internal control over financial reporting was effective as of December 31, 2021. PricewaterhouseCoopers LLP, an independent registered public accounting firm, has audited the effectiveness of Nucor's internal control over financial reporting as of December 31, 2021 as stated in their report which is included herein.

Report of Independent Registered Public Accounting Firm

To the Stockholders and Board of Directors of Nucor Corporation

Opinions on the Financial Statements and Internal Control over Financial Reporting

We have audited the accompanying consolidated balance sheets of Nucor Corporation and its subsidiaries (the "Company") as of December 31, 2021 and 2020, and the related consolidated statements of earnings, of comprehensive income, of stockholders' equity and of cash flows for each of the three years in the period ended December 31, 2021, including the related notes (collectively referred to as the "consolidated financial statements"). We also have audited the Company's internal control over financial reporting as of December 31, 2021, based on criteria established in Internal Control - Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2021 and 2020, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2021 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2021, based on criteria established in Internal Control - Integrated Framework (2013) issued by the COSO.

Basis for Opinions

The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 8. Our responsibility is to express opinions on the Company's consolidated financial statements and on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the consolidated financial statements included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

As described in Management's Report on Internal Control over Financial Reporting, management has excluded the insulated metal panels ("IMP") business of Cornerstone Building Brands, Inc. and Hannibal Industries, Inc. ("Hannibal") from its assessment of internal control over financial reporting as of December 31, 2021, because they were acquired by the Company in purchase business combinations during 2021. We have also excluded IMP and Hannibal from our audit of internal control over financial reporting. IMP and Hannibal are wholly-owned subsidiaries whose total assets and total revenues excluded from management's assessment and our audit of internal control over financial reporting collectively represent approximately 2.67% and 1.12%, respectively, of the related consolidated financial statement amounts as of and for the year ended December 31, 2021.

Definition and Limitations of Internal Control over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Critical Audit Matters

The critical audit matter communicated below is a matter arising from the current period audit of the consolidated financial statements that was communicated or required to be communicated to the audit committee and that (i) relates to accounts or disclosures that are material to the consolidated financial statements and (ii) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Goodwill Impairment Analysis - Rebar Fabrication Reporting Unit

As described in Notes 2 and 8 to the consolidated financial statements, the Company's consolidated goodwill balance was \$2.8 billion as of December 31, 2021, and total goodwill associated with the Rebar Fabrication reporting unit was \$363.0 million. Goodwill is tested annually for impairment and whenever events or circumstances change that would make it more likely than not that an impairment may have occurred. Management completed its 2021 goodwill impairment analysis as of the first day of the fourth quarter of 2021. The evaluation of impairment involves comparing the current estimated fair value of each reporting unit to the recorded value, including goodwill. For certain reporting units, it is necessary to perform a quantitative analysis. In these instances, a discounted cash flow model is used to determine the current estimated fair value of these reporting units. As disclosed by management, significant assumptions used to determine the fair value of each reporting unit as part of management's annual testing, and any required interim testing include (i) expected cash flow for the five-year period following the testing date (including market share, sales volumes and prices, raw material costs and other costs to produce and estimated capital needs); (ii) an estimated terminal value using a terminal year growth rate determined based on the growth prospects of the reporting unit; (iii) a discount rate based on management's best estimate of the after-tax weighted-average cost of capital; and (iv) a probabilityweighted scenario approach by which varying cash flows are assigned to certain scenarios based on the likelihood of occurrence.

The principal considerations for our determination that performing procedures relating to the goodwill impairment analysis for the Rebar Fabrication reporting unit is a critical audit matter are the significant judgment by management when determining the fair value of the reporting unit, which in turn led to significant auditor judgment, subjectivity, and effort in performing procedures and evaluating management's significant assumptions related to sales prices, raw material costs, the terminal year growth rate and the discount rate assumption.

Addressing the matter involved performing procedures and evaluating audit evidence in connection with forming our overall opinion on the consolidated financial statements. These procedures included testing the effectiveness of controls relating to management's goodwill impairment assessment, including controls over the underlying assumptions related to the fair value of the reporting unit. These procedures also included, among others, testing management's process for developing the fair value estimate of the Rebar Fabrication reporting unit; evaluating the appropriateness of the discounted cash flow model; testing the completeness, accuracy, and relevance of underlying data used in the model; and evaluating the significant assumptions used by management related to the sales prices, raw material costs, terminal year growth rate and discount rate. Evaluating management's assumptions related to sales prices, raw material costs and the terminal year growth rate involved evaluating whether the assumptions used by management were reasonable considering (i) the current and past performance of the reporting unit, (ii) the consistency with external market and industry data, and (iii) whether the assumptions were consistent with evidence obtained in other areas of the audit. Professionals with specialized skill and knowledge were used to assist in the evaluation of the Company's discounted cash flow model and the discount rate assumption.

/s/ PricewaterhouseCoopers LLP Charlotte, North Carolina February 28, 2022

We have served as the Company's auditor since 1989.

NUCOR CORPORATION AND SUBSIDIARIES NOTES TO CONSOLIDATED FINANCIAL STATEMENTS YEARS ENDED DECEMBER 31, 2021, 2020 AND 2019

1. Nature of Operations and Basis of Presentation

Nature of Operations

Nucor is principally a manufacturer of steel and steel products, as well as a scrap broker and processor, with operating facilities and customers primarily located in North America.

Principles of Consolidation

The consolidated financial statements include Nucor and its controlled subsidiaries, including Nucor-Yamato Steel Company (Limited Partnership) ("Nucor-Yamato"), of which Nucor owns 51%. All intercompany transactions are eliminated.

Distributions are made to noncontrolling interest partners in Nucor-Yamato Steel Company (Limited Partnership) in accordance with the limited partnership agreement by mutual agreement of the general partners. At a minimum, sufficient cash is distributed so that each partner may pay its U.S. federal and state income taxes.

Use of Estimates

The preparation of financial statements in conformity with generally accepted accounting principles in the United States of America requires management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. Actual results could differ from these estimates.

2. Summary of Significant Accounting Policies

Cash and Cash Equivalents

Cash equivalents are recorded at cost plus accrued interest, which approximates fair value, and have original maturities of three months or less at the date of purchase. Cash and cash equivalents are maintained primarily with a few high-credit quality financial institutions.

Short-term Investments

Short-term investments are recorded at cost plus accrued interest, which approximates fair value. Unrealized gains and losses on investments classified as available-for-sale are recorded as a component of accumulated other comprehensive income (loss). Management determines the appropriate classification of its investments at the time of purchase and re-evaluates such determination at each balance sheet date.

Inventories

Inventories are stated at the lower of cost or net realizable value. The Company records any amount required to reduce the carrying value of inventory to net realizable value as a charge to cost of products sold. Scrap and scrap substitute costs are a very significant component of the raw material, semi-finished and finished product inventory balances. The vast majority of the Company's inventory is recorded on the first-in, first-out method. Production costs are applied to semi-finished and finished product inventory from the approximate period in which they are produced.

Property, Plant and Equipment

Property, plant and equipment is stated at cost, except for property, plant and equipment acquired through acquisitions which is recorded at acquisition date fair value. With the exception of our natural gas wells, depreciation primarily is provided on a straight-line basis over the estimated useful lives of the assets. Depletion of all capitalized costs associated with our natural gas producing properties is expensed on a unit-of-production basis by individual field as the gas from the proved developed reserves is produced. The costs of acquiring unproved natural gas leasehold acreage are capitalized. When proved reserves are found on unproved properties, the associated leasehold cost is transferred to proved properties. Unproved leases are reviewed periodically for any impairment triggering event, and a valuation allowance is provided for any estimated decline in value. The costs of planned major maintenance activities are capitalized as part of other current assets and amortized over the period until the next scheduled major maintenance activity. All other repairs and maintenance activities are expensed when incurred.

Goodwill and Other Intangibles

Goodwill is the excess of cost over the fair value of net assets of businesses acquired. Goodwill is not amortized but is tested annually for impairment and whenever events or circumstances change that would make it more likely than not that an impairment may have occurred. We perform our annual impairment analysis as of the first day of the fourth quarter each year. The evaluation of impairment involves comparing the current estimated fair value of each reporting unit, which is a level below the reportable segment, to the recorded value, including goodwill. When appropriate, Nucor performs a qualitative assessment to determine whether it is more likely than not that the fair value of a reporting unit is less than its carrying amount. For certain reporting units, it is necessary to perform a quantitative analysis. In these instances, a discounted cash flow model is used to determine the current estimated fair value of these reporting units. A number of significant assumptions and estimates are involved in the application of the discounted cash flow model to forecast operating cash flows, which could include market growth and market share, sales volumes and prices, raw materials and other costs to produce, discount rate and estimated capital needs. Management considers historical experience and all available information at the time the fair values of its reporting units are estimated. Assumptions in estimating future cash flows are subject to a high degree of judgment and complexity. Changes in assumptions and estimates may affect the fair value of goodwill and could result in impairment charges in future periods.

Finite-lived intangible assets are amortized over their estimated useful lives on a straight-line or accelerated basis.

Long-Lived Asset Impairments

We evaluate our property, plant and equipment and finite-lived intangible assets for potential impairment on an individual asset basis or at the lowest level asset grouping for which independent cash flows can be separately identified. Asset impairments are assessed whenever circumstances indicate that the carrying amounts of those productive assets could exceed their projected undiscounted cash flows. When it is determined that impairment exists, the related assets are written down to their estimated fair market value.

Equity Method Investments

Investments in joint ventures in which Nucor shares control over the financial and operating decisions but in which Nucor is not the primary beneficiary are accounted for under the equity method. Each of the Company's equity method investments is subject to a review for impairment if, and when, circumstances indicate that a decline in fair value below its carrying amount may have occurred. Examples of such circumstances include, but are not limited to, a significant deterioration in the earnings performance or business prospects of the investee; missed financial projections; a significant adverse change in the regulatory, tax, economic or technological environment of the investee; a significant adverse change in the general market condition of either the geographic area or the industry in which the investee operates; and recurring negative cash flows from operations. When management considers the decline to be other than temporary, the Company would write down the related investment to its estimated fair market value.

Revenue Recognition

Nucor recognizes revenue when obligations under the terms of contracts with our customers are satisfied and collection is reasonably assured; generally, obligations under the terms of contracts are satisfied upon shipment or when control is transferred. Revenue is measured as the amount of consideration expected to be received in exchange for transferring the goods. In addition, revenue is deferred when cash payments are received or due in advance of performance. See Note 23 for further information.

Income Taxes

Nucor utilizes the liability method of accounting for income taxes. Under the liability method, deferred taxes are determined based on the temporary differences between the financial statement and tax basis of assets and liabilities using tax rates expected to be in effect during the years in which the basis differences reverse. A valuation allowance is recorded when it is more likely than not that some of the deferred tax assets will not be realized.

Nucor recognizes the effect of income tax positions only if those positions are more likely than not of being sustained. Potential accrued interest and penalties related to unrecognized tax benefits are recognized as a component of interest expense and other expenses.

Stock-Based Compensation

The Company recognizes the cost of stock-based compensation as an expense using fair value measurement methods. The assumptions used to calculate the fair value of stock-based compensation granted are evaluated and revised for new grants, as necessary, to reflect market conditions and experience.

Foreign Currency Translation

For Nucor's operations where the functional currency is other than the U.S. dollar, assets and liabilities have been translated at year-end exchange rates, and income and expenses have been translated using average exchange rates for the respective periods. Adjustments resulting from the process of translating an entity's financial statements into the U.S. dollar have been recorded in accumulated other comprehensive income (loss) and are included in net earnings only upon sale or liquidation of the underlying investments. Foreign currency transaction gains and losses are included in net earnings in the period they occur.

3. Short-term Investments

Nucor held \$253.0 million of short-term investments as of December 31, 2021 (\$408.0 million as of December 31, 2020). The investments held as of December 31, 2021 and December 31, 2020 consisted mainly of several certificates of deposit ("CD's"), commercial paper and corporate bonds, which were classified as available-for-sale. Interest income on the CD's and corporate bonds was recorded as earned.

No realized or unrealized gains or losses were incurred in 2021, 2020 or 2019.

4. Accounts Receivable

An allowance for doubtful accounts is maintained for estimated losses resulting from the inability of our customers to make required payments. Accounts receivable are stated net of the allowance for doubtful accounts of \$95.4 million at December 31, 2021 (\$51.3 million at December 31, 2020 and \$59.9 million at December 31, 2019).

5. Inventories

Inventories consisted of approximately 43% raw materials and supplies and 57% finished and semi-finished products at December 31, 2021 (42% and 58%, respectively, at December 31, 2020). Nucor's manufacturing process consists of a continuous, vertically integrated process from which products are sold to customers at various stages throughout the process. Since most steel products can be classified as either finished or semi-finished products, these two categories of inventory are combined.

6. Leases

We lease certain equipment, office space and land. Leases with an initial term of 12 months or less are not recorded on the consolidated balance sheet.

Most leases include one or more options to renew, with renewal terms that can extend the lease term from one to five years or more. The exercise of lease renewal options is at our sole discretion and we consider these options in determining the lease term used to establish our right-of-use assets and lease liabilities. Certain leases also include options to purchase the leased property. The depreciable life of assets and leasehold improvements is limited by the expected lease term, unless there is a transfer of title or a purchase option reasonably certain of exercise.

We determine that a contract contains a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. In evaluating whether we have the right to control the use of an identified asset, we assess whether or not we have the right to control the use of the identified asset and to obtain substantially all of the economic benefit from the use of the identified asset.

As most of our leases do not provide an implicit rate, we use our incremental borrowing rate based on the information available at the commencement date in determining the present value of lease payments.

Certain of our lease agreements include payments that adjust periodically for consumption of goods provided by the right-of-use asset in excess of contractually determined minimum amounts and for inflation. These variable lease payments are not significant. Our lease agreements do not contain any material residual value guarantees or material restrictive covenants.

Supplemental statement of earnings information related to our leases is as follows (in thousands):

Year Ended December 31,

	Statement of Earnings Classification		2021	 2020		2019
Operating lease cost	Cost of products sold	\$	21,503	\$ 20,959	\$	21,275

Non-current finance	Long-term debt and finance lease				
	obligations due after one year		164,375	 79,453	
Total leased		\$	273,812	\$ 186,060	

Weighted-average remaining lease term and discount rate for our leases are as follows:

	December 31, 2021
Weighted-average remaining lease term - operating leases	8.5 Years
Weighted-average remaining lease term - finance leases	14.0 Years
Weighted-average discount rate - operating leases	3.0%
Weighted-average discount rate - finance leases	14.9%

The reason for the substantial weighted-average discount rate – finance leases, of 14.9%, is due to Nucor's past accounting for the respective finance leases under the former accounting guidance for capital leases. Pursuant to the former lease accounting guidance, the recognition of a capital lease asset and associated capital lease liability could not exceed the fair market value of the leased asset at the lease commencement. Accordingly, the incremental borrowing rate was adjusted upward so that the present value of the minimum lease payments would equal the fair value of the asset.

Maturities of lease liabilities by year for our leases were as follows as of December 31, 2021 (in thousands):

	Operating Leases		Fina	nce Leases
Maturities of lease liabilities, year ending December 31,				
2022	\$	22,802	\$	26,256

December 31,		2021		2020		
Land and improvements, net	\$	845,772	\$	744,305		
Buildings and improvements		1,845,937		1,505,913		
Machinery and equipment		13,119,177		12,204,738		
Proved oil and gas properties		558,336		558,231		
Leasehold interest in unproved oil and gas properties		96,000		138,000		
Construction in process and equipment deposits		2,039,245		1,603,416		
		18,504,467		16,754,603		
Less accumulated depreciation		(10,389,649)		(9,855,493)		
	\$	8,114,818	\$	6,899,110		

The estimated useful lives primarily range from five to 25 years for land improvements, four to 40 years for buildings and improvements and two to 15 years for machinery and equipment. The useful life for proved oil and gas properties is based on the unit-of-production method and varies by well.

Steel Mills Segment Asset Impairments

In 2019, Nucor recorded a non-cash impairment charge of \$20.0 million related to certain property, plant and equipment at our plate mill in Texas. This charge is included in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2019.

In 2020, Nucor recorded non-cash impairment charges totaling \$103.2 million related to certain inventory and long-lived assets, which primarily related to our Castrip sheet mill operations. Due to the advancements in the capabilities at our new cold mill and galvanizing line at Nucor Steel Arkansas, we believe the value of the technology and process has diminished for Nucor. As such, the existing Castrip assets are not expected to be materially utilized going forward. These charges are included in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2020.

Raw Materials Segment Asset Impairments

In the fourth quarter of 2019, due to the deteriorating natural gas pricing environment at our sales point in the Piceance Basin as well as the decreased performance of its natural gas well assets, Nucor determined a triggering event had occurred and performed an impairment analysis on all three groups ("fields") of wells. As a result of the fourth quarter of 2019 analysis, a \$35.0 million non-cash impairment charge was recorded on one field of wells. An increase in the estimated lease operating cost projections was the primary factor in causing this field of wells to be impaired. The non-cash impairment charge is included in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2019.

One of the primary assumptions that affects the undiscounted cash flows determination is management's estimate of future pricing of natural gas and natural gas liquids. The pricing used in the impairment assessments was developed by management based on projected natural gas market supply and demand dynamics, in conjunction with a review of projections by market analysts. Management also makes estimates on the expected reserve levels and on the expected lease operating costs. The impairment assessments were performed on each of Nucor's three fields of wells, with each field defined by common geographic location. The combined carrying value of the three fields of wells was \$65.2 million at December 31, 2021 (\$71.7 million at December 31, 2020).

Changes in the natural gas industry or a prolonged low-price environment beyond what had already been assumed in the assessments could cause management to revise the natural gas and natural gas liquids price assumptions, the estimated reserves or the estimated lease operating costs. Unfavorable revisions to these assumptions or estimates could possibly result in further impairment of some or all of the fields of proved well assets.

In 2020, regulatory authorities in Colorado adopted new rules that became effective January 2021. One of these rules increased drilling setback distances. In the fourth quarter of 2020, Nucor determined a triggering event had occurred, as we do not expect to be able to access the full extent of the resources in the ground, and performed an impairment analysis. As a result, Nucor recorded a \$27.0 million non-cash impairment charge related to the write-down of our leasehold interest in unproved oil and gas properties. This charge is included in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2020.

In the second quarter of 2021, Nucor decided that it would not develop a portion of its unproved oil and natural gas properties ("Portion A") within the contractually specified time period related to Portion A. As a result of this decision, the Company will forfeit its leasehold rights for Portion A. The Company recorded a charge of \$42.0 million to write off the value of Portion A that is included in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2021. The decision not to develop Portion A was heavily influenced by the approaching deadline to commence development combined with Portion A's expected near-term profitability not achieving management's desired returns relative to the cost of development. A significant portion of the Company's remaining leasehold interest in unproved oil and natural gas properties are held by production. Accordingly, management does not believe the value assigned to those portions needs to be evaluated at this time. The carrying value of the remaining portions of unproved oil and natural gas properties was \$96.0 million at December 31, 2021.

8. Goodwill and Other Intangible Assets

The change in the net carrying amount of goodwill for the years ended December 31, 2021 and 2020 by segment is as follows:

	(in thousands)							
	Steel	Steel	Raw					
	Mills	Products	Materials	Total				
Balance, December 31, 2019	\$ 591,986	\$ 879,500	\$ 729,577	\$2,201,063				
Acquisitions	20,484	(821)	_	19,663				
Translation	_	8,946	_	8,946				
Balance, December 31, 2020	612,470	887,625	729,577	2,229,672				
Acquisitions	705	553,704	44,718	599,127				
Translation		(1,455)		(1,455)				
Balance, December 31, 2021	\$ 613,175	\$1,439,874	\$ 774,295	\$2,827,344				

The majority of goodwill is not tax deductible.

Intangible assets with estimated useful lives of five to 22 years are amortized on a straight-line or accelerated basis and are comprised of the following:

	(in thousands)									
	Decembe	r 31, 2021	Decembe	r 31, 2020						
	Gross	Accumulated	Gross	Accumulated						
	Amount Amortization		Amount	Amortization						
Customer relationships	\$1,872,348	\$ 924,506	\$1,421,962	\$ 838,443						
Trademarks and trade names	217,255	99,906	162,365	100,000						
Other	105,522	66,954	63,822	41,685						
	\$2,195,125	\$1,091,366	\$1,648,149	\$ 980,128						

Intangible asset amortization expense was \$129.2 million in 2021 (\$83.4 million in 2020 and \$85.7 million in 2019). Annual amortization expense is estimated to be \$154.6 million in 2022, \$132.9 million in 2023, \$132.1 million in 2024, \$131.2 million in 2025 and \$128.2 million in 2026.

The Company completed its annual goodwill impairment testing as of the first day of the fourth quarter for each of 2021, 2020 and 2019 and concluded that as of each such date there was no impairment of goodwill for any of its reporting units.

The annual assessment performed in 2021 for one of the Company's reporting units, Rebar Fabrication, used forward-looking projections and included continued positive future cash flows. The fair value of this reporting unit exceeded its carrying value by approximately 54% in the most recent assessment. Although profitability fluctuates year-to-year, we currently expect the reporting unit to be profitable in 2022. If our assessment of the relevant facts and circumstances changes, or the actual performance of this reporting unit falls short of expected results, non-cash impairment charges may be required. Total goodwill associated with the Rebar Fabrication reporting unit as of December 31, 2021 was \$363.0 million. An impairment of goodwill may also lead us to record an impairment of other intangible assets. Total finite-lived intangible assets associated with the Rebar Fabrication reporting unit as of December 31, 2021 was \$45.0 million.

There are no significant historical accumulated impairment charges, by segment or in the aggregate, related to goodwill.

9. Equity Investments

The carrying value of our equity investments in domestic and foreign companies was \$624.6 million at December 31, 2021 (\$520.0 million at December 31, 2020), and is recorded in other assets in the consolidated balance sheets.

NuMit

Nucor owns a 50% economic and voting interest in NuMit LLC ("NuMit"). NuMit owns 100% of the equity interest in Steel Technologies LLC, an operator of 30 sheet processing facilities located throughout the United States, Canada and Mexico. Nucor accounts for its investment in NuMit (on a one-month lag basis) under the equity method, as control and risk of loss are shared equally between the members of NuMit. Nucor's investment in NuMit was \$418.7 million at December 31, 2021 (\$323.6 million at December 31, 2020). Nucor received distributions of \$0.2 million, \$9.5 million and \$36.5 million from NuMit during 2021, 2020 and 2019, respectively.

Nucor-JFE

Nucor owns a 50% economic and voting interest in Nucor-JFE Steel Mexico, S. de R.L. de C.V. ("Nucor-JFE"), a 50-50 joint venture with JFE Steel Corporation ("JFE") of Japan, to build and operate a galvanized sheet steel plant in central Mexico. After delays caused by the COVID-19 pandemic, Nucor-JFE resumed hot commissioning in early December 2020. Nucor accounts for its investment in Nucor-JFE (on a one-month lag basis) under the equity method, as control and risk of loss are shared equally between the members of Nucor-JFE. Nucor's investment in Nucor-JFE was \$147.0 million at December 31, 2021 (\$147.1 million at December 31, 2020).

On January 16, 2019, Nucor entered into an agreement to guarantee a percentage, equal to its ownership percentage (50%), of Nucor-JFE's borrowings under the General Financing Agreement and Promissory Note (the "JFE Facility"). The fair value of the guarantee is immaterial. Nucor's guarantee expires on April 30, 2022. The maximum amount Nucor-JFE could borrow under the JFE Facility was amended on November 30, 2021 to \$100.0 million. The JFE Facility is uncommitted. As of December 31, 2021, there was \$90.0 million outstanding under the JFE Facility (\$50.0 million as of December 31, 2020). If Nucor-JFE fails to pay when due any amounts for which it is obligated under the JFE Facility, Nucor could be required to pay 50% of such amounts pursuant to and in accordance with the terms of its guarantee. Nucor has not recorded any liability associated with this guarantee.

Nucor-JFE has other credit facilities that Nucor has agreed to guarantee. The principal amount subject to guarantee by Nucor for these other credit facilities was \$50.0 million as of December 31, 2021 (\$25.0 million as of December 31, 2020). The fair value of the guarantees is immaterial. If Nucor-JFE fails to pay when due any amounts for which it is obligated under the other credit facilities, Nucor could be required to pay such amounts pursuant to and in accordance with the terms of its guarantees. Nucor has not recorded any liability associated with these guarantees.

Duferdofin Nucor

Nucor previously owned a 50% interest in Duferdofin Nucor S.r.l. ("Duferdofin Nucor"), an Italian steel manufacturer, and accounted for its investment (on a one-month lag basis) under the equity method, as control and risk of loss were shared equally between the members of Duferdofin Nucor. In December 2020, Nucor closed on an agreement (the "Duferdofin Agreement") to transfer its 50% interest in Duferdofin Nucor to the owner of the remaining 50% interest, making Nucor's investment in Duferdofin Nucor \$0 at December 31, 2020.

In conjunction with the consummation of the Duferdofin Agreement, Nucor forgave the previously fully reserved, outstanding note receivable of €35.0 million (\$37.8 million) from Duferdofin Nucor, and Nucor was released from the guarantee it previously provided with respect to Duferdofin Nucor's borrowings under Facility A of the Structured Trade Finance Facilities Agreement (the "Duferdofin Agreement"). The fair value of the guarantee was immaterial, and Nucor did not have a liability recorded associated with this guarantee.

All Equity Investments

Nucor reviews its equity investments for impairment if and when circumstances indicate that a decline in fair value below their carrying amounts may have occurred. Nucor determined that a triggering event occurred in the first quarter of 2020 with respect to its equity method investment in Duferdofin Nucor due to adverse developments in the joint venture's commercial outlook, which were exacerbated by the COVID-19 pandemic, all of which negatively impacted the joint venture's strategic direction. After completing its impairment assessment, Nucor determined that the carrying amount exceeded its estimated fair value and the impairment condition was considered to be other than temporary. Therefore, Nucor recorded a \$250.0 million impairment charge in the first quarter of 2020. The assumptions that most significantly affected the fair value determination included projected cash flows and the discount rate. The Company-specific inputs for measuring fair value are considered "Level 3" or unobservable inputs that are not corroborated by market data under applicable fair value authoritative guidance, as quoted market prices are not available.

Throughout 2020, additional capital contributions were made by the Company to Duferdofin Nucor that were immediately impaired. These additional capital contributions resulted in \$5.0 million, \$6.6 million and \$25.4 million impairment charges against our investment in Duferdofin Nucor in the second, third and fourth quarters of 2020, respectively. Also, in the fourth quarter of 2020, Nucor reclassified into earnings, \$158.6 million of cumulative foreign currency translation losses on our investment in Duferdofin Nucor. In 2020, total impairment charges, including the aforementioned note receivable, related to our investment in Duferdofin Nucor were approximately \$483.5 million. These non-cash impairment charges are included in the steel mills segment and in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2020.

10. Current Liabilities

Book overdrafts, included in accounts payable in the consolidated balance sheets, were \$143.8 million at December 31, 2021 (\$210.5 million at December 31, 2020). Dividends payable, included in accrued expenses and other current liabilities in the consolidated balance sheets, were \$137.6 million at December 31, 2021 (\$123.9 million at December 31, 2020).

11. Debt and Other Financing Arrangements

	(in thousands)

Total long-term debt and finance lease obligations due after						
one year	\$	4,961,410	\$	5,271,789		

The industrial revenue bonds had variable rates ranging from 0.14% to 0.18% at December 31, 2021 and 0.16% to 0.19% at December 31, 2020.

Annual aggregate long-term debt maturities are: \$601.0 million in 2022, \$500.0 million in 2023, none in 2024, \$500.0 million in 2025, \$21.5 million in 2026 and \$3.98 billion thereafter.

In May 2020, Nucor issued \$500.0 million of 2.000% Notes due 2025 and \$500.0 million of 2.700% Notes due 2030. Net proceeds of the issuances were \$989.4 million. Costs of \$8.4 million associated with the issuances have been capitalized and will be amortized over the life of the notes.

In July 2020, Nucor became an obligor with respect to \$162.6 million in 40-year variable-rate Green Bonds to partially fund the capital costs, in particular the expenditures associated with pollution prevention and control (including waste recycling and waste reduction), of the construction of Nucor's plate mill located in Brandenburg, Kentucky. In August 2021, Nucor became an obligor with respect to an additional \$197.0 million in 40-year variable-rate Green Bonds. The net proceeds from the debt issuances are being held in a trust account pending disbursement for the construction of the facility and have been accounted for as restricted cash. Funds are disbursed from the trust account as qualified expenditures for the construction of the Brandenburg facility are made.

In December 2020, Nucor exchanged \$439.3 million of its 2.979% Notes due 2055 (the "2055 Notes") and a cash component of \$180.3 million for \$106.7 million of its 6.400% Notes due 2037, \$161.9 million of its 5.200% Notes due 2043 and \$170.8 million of its 4.400% Notes due 2048 with holders of such existing notes. The December 2020 exchange offer and the 2055 notes offered thereby were not registered under the Securities Act of 1933, as amended (the "Securities Act"). This exchange transaction was accounted for as a modification and, as such, the cash component of \$180.3 million was capitalized as a reduction of long-term debt and is being amortized into interest expense over the life of the new notes. In November 2021, Nucor completed an offer to exchange the 2055 Notes that were not registered under the Securities Act for a like principal amount of notes having terms substantially identical as the 2055 Notes and that are registered under the Securities Act.

On November 5, 2021, Nucor amended and restated its revolving credit facility to increase the borrowing capacity from \$1.50 billion to \$1.75 billion and to extend its maturity date to November 5, 2026. This facility remains undrawn. Costs associated with the amendment were immaterial. The unsecured revolving credit facility provides up to \$1.75 billion in revolving loans and allows up to \$500.0 million in additional commitments at Nucor's election in accordance with the terms set forth in the credit agreement. Up to \$100.0 million of the credit facility is available for the issuance of letters of credit and up to \$500.0 million is available for the issuance of revolving loans for Nucor subsidiaries in accordance with the terms set forth in the credit agreement. The credit facility provides for a pricing grid based upon the credit rating of Nucor's senior unsecured long-term debt and, alternatively, interest rates quoted by lenders in connection with competitive bidding. The credit facility includes customary financial and other covenants, including a limit on the ratio of funded debt to total capital of 60%, a limit on Nucor's ability to pledge the Company's assets and a limit on consolidations, mergers and sales of assets. As of December 31, 2021, Nucor's funded debt to total capital ratio was 28%, and Nucor was in compliance with all covenants under the credit facility. No borrowings were outstanding under the credit facility as of December 31, 2021 and 2020.

Harris Steel has credit facilities totaling approximately \$18.4 million, with no outstanding borrowings at December 31, 2021 and 2020. In addition, the business of Nucor Trading S.A. is financed by uncommitted trade credit arrangements with a number of European banking institutions. As of December 31, 2021, Nucor Trading S.A. had outstanding borrowings of \$107.7 million, which are presented in short-term debt in the consolidated balance sheet (\$57.9 million as of December 31, 2020).

Letters of credit totaling \$98.7 million were outstanding as of December 31, 2021 (\$63.3 million as of December 31, 2020), related to certain obligations, including workers' compensation, utilities deposits and credit arrangements by Nucor Trading S.A. for commitments to purchase inventories.

12. Capital Stock

The par value of Nucor's common stock is \$0.40 per share and there are 800 million shares authorized. In addition, 250,000 shares of preferred stock, par value \$4.00 per share, are authorized, with preferences, rights and restrictions as may be fixed by the Board of Directors. There are no shares of preferred stock issued or outstanding.

Dividends declared per share were \$1.715 in 2021 (\$1.6125 in 2020 and \$1.6025 per share in 2019).

The Company repurchased approximately \$3.28 billion of its common stock in 2021 (approximately \$39.5 million in 2020 and \$298.5 million in 2019).

On December 2, 2021, the Company announced that the Board of Directors had approved a new share repurchase program under which the Company is authorized to repurchase up to \$4.00 billion of the Company's common stock and terminated all previously authorized share repurchase programs. Share repurchases will be made from time to time in the open market at prevailing market prices or through private transactions or block trades. The timing and amount of repurchases will depend on market conditions, share price, applicable legal requirements and other factors. The share repurchase authorization is discretionary and has no expiration date. At December 31, 2021, the Company had approximately \$3.85 billion available for share repurchases under the program authorized by the Company's Board of Directors.

13. <u>Derivative Financial Instruments</u>

The following tables summarize information regarding Nucor's derivative financial instruments (in thousands):

		Fair Valu Decembe

At December 31, 2021, natural gas swaps covering approximately 57.3 million MMBTUs (extending through December 2024) were outstanding.

14. Fair Value Measurements

The following table summarizes information regarding Nucor's financial assets and liabilities that are measured at fair value. Nucor does not have any non-financial assets or liabilities that are measured at fair value on a recurring basis.

			(in thousands) Fair Value Measurements at Reporting Date Using							
Description As of December 31, 2021	С	Carrying Amount in Consolidated Balance Sheets		Quoted Prices in Active Significant Markets for Other Identical Observable Assets Inputs (Level 1) (Level 2)		u	Significant Inobservable Inputs (Level 3)

Fair value measurements for Nucor's cash equivalents, short-term investments and restricted cash and cash equivalents are classified under Level 1 because such measurements are based on quoted market prices in active markets for identical assets. Fair value measurements for Nucor's derivatives, which are typically commodity or foreign exchange contracts, are classified under Level 2 because such measurements are based on published market prices for similar assets or are estimated based on observable inputs such as interest rates, yield curves, credit risks, spot and future commodity prices, and spot and future exchange rates. There were no transfers between levels in the fair value hierarchy for the periods presented.

The fair value of short-term and long-term debt, including current maturities, was approximately \$6.06 billion at December 31, 2021 (approximately \$6.05 billion at December 31, 2020). The debt fair value estimates are classified under Level 2 because such estimates are based on readily available market prices of our debt at December 31, 2021 and 2020, or similar debt with the same maturities, ratings and interest rates.

Disclosures are required for certain assets and liabilities that are measured at fair value, but are recognized and disclosed on a nonrecurring basis in periods subsequent to initial recognition. For Nucor, our previously owned equity investment in Duferdofin Nucor was measured at fair value as a result of the impairment charges recorded in 2020 (see Note 9).

15. Contingencies

Nucor is subject to environmental laws and regulations established by federal, state and local authorities and, accordingly, makes provisions for the estimated costs of compliance. Of the undiscounted total of \$13.6 million of accrued environmental costs at December 31, 2021 (\$16.0 million at December 31, 2020), \$2.3 million was classified in accrued expenses and other current liabilities (\$5.6 million at December 31, 2020) and \$11.3 million was classified in deferred credits and other liabilities (\$10.4 million at December 31, 2020). Inherent uncertainties exist in these estimates primarily due to unknown conditions, evolving remediation technology and changing governmental regulations, legal standards and enforcement priorities.

We are from time to time a party to various lawsuits, claims and other legal proceedings that arise in the ordinary course of business. With respect to all such lawsuits, claims and proceedings, we record reserves when it is probable a liability has been incurred and the amount of loss can be reasonably estimated. We do not believe that any of these proceedings, individually or in the aggregate, would be expected to have a material adverse effect on our results of operations, financial position or cash flows. Nucor maintains liability insurance with self-insurance limits for certain risks.

16. Stock-Based Compensation

Overview

The Company maintains the Nucor Corporation 2014 Omnibus Incentive Compensation Plan (the "Omnibus Plan") under which the Company may award stock-based compensation to key employees, officers and non-employee directors. The Company's stockholders approved an amendment and restatement of the Omnibus Plan on May 14, 2020. The Omnibus Plan, as amended and restated, permits the award of stock options, restricted stock units, restricted shares and other stock-based awards for up to 19.0 million shares of the Company's common stock. As of December 31, 2021, 7.0 million shares remained available for award under the Omnibus Plan.

The Company also maintains a number of inactive plans under which stock-based awards remain outstanding but no further awards may be made. As of December 31, 2021, 0.4 million shares were reserved for issuance upon the future settlement of outstanding awards under such inactive plans.

Stock Options

Stock options may be granted to Nucor's key employees, officers and non-employee directors with exercise prices at 100% of the market value on the date of the grant. The stock options granted are generally exercisable at the end of three years and have a term of 10 years.

A summary of activity under Nucor's stock option plans is as follows (shares in thousands):

	2021			20		2019			
		Average A Exercise E		eighted- verage xercise		A E	eighted- verage xercise		
Year Ended December 31,	Shares		Price	Shares	_	Price	Shares	_	Price
Number of shares under stock options:									
Outstanding at beginning of year	3,916	\$	50.03	3,892	\$	50.78	3,828	\$	49.71
Granted	138	\$	110.74	529	\$	42.46	489	\$	48.00
Exercised	(2,868)	\$	50.65	(266)	\$	44.51	(425)	\$	37.97
Canceled	_	\$	_	(239)	\$	51.58	_	\$	_
Outstanding at end of year	1,186	\$	55.58	3,916	\$	50.03	3,892	\$	50.78
Stock options exercisable at end of year	523	\$	54.71	3,168	\$	50.85	3,276	\$	49.79

The total intrinsic value of stock options (the amount by which the stock price exceeded the exercise price of the stock option on the date of exercise) that were exercised during 2021 was \$67.8 million (\$3.3 million in 2020 and \$7.7 million in 2019).

The following table summarizes information about stock options outstanding at December 31, 2021 (shares in thousands):

	O _I	otions Outstanding	Options Exercisable				
Range of Exercise Prices	Number Outstanding			Weighted- Average Exercise Price	Number Exercisable		Weighted- Average Exercise Price
\$35.00 - \$45.00	570	6.5 years	\$	41.43	173	\$	39.06
\$45.01 - \$55.00	232	6.5 years	\$	48.07	88	\$	48.18
\$55.01 - \$65.00	47	5.4 years	\$	59.07	47	\$	59.07
\$65.01 - \$75.00	199	6.4 years	\$	65.80	199	\$	65.80
\$75.01 - \$110.74	138	8.9 years	\$	110.74	16	\$	110.74
\$35.00 - \$110.74	1,186	6.7 years	\$	55.58	523	\$	54.71

As of December 31, 2021, the total aggregate intrinsic value of stock options outstanding and stock options exercisable was \$69.5 million and \$31.1 million, respectively.

The grant date fair value of stock options granted was \$32.30 per share in 2021 (\$7.56 per share in 2020 and \$8.69 per share in 2019). The fair value was estimated using the Black-Scholes options pricing model with the following assumptions:

	2021	2020	2019
Exercise price	\$110.74	\$42.46	\$48.00
Expected dividend yield	1.46%	3.79%	3.33%
Expected stock price volatility	32.86%	30.12%	25.57%
Risk-free interest rate	1.28%	0.50%	2.03%
Expected life (years)	6.5	6.5	6.5

Stock options granted to employees who are eligible for retirement on the date of the grant are expensed immediately since these awards vest upon retirement from the Company. Retirement, for purposes of vesting in these stock options, means termination of employment after satisfying age and years of service requirements. Similarly, stock options granted to employees who will become retirement-eligible prior to the end of the vesting term are expensed over the period through which the employee will become retirement-eligible. Compensation expense for stock options granted to employees who will not become retirement-eligible prior to the end of the vesting term is recognized on a straight-line basis over the vesting period. Compensation expense for stock options was \$3.8 million in 2021 (\$2.7 million in 2020 and \$4.7 million in 2019). As of December 31, 2021, unrecognized compensation expense related to stock options was \$3.1 million, which is expected to be recognized over a weighted-average period of 2.0 years.

Restricted Stock Units

Nucor annually grants restricted stock units ("RSUs") to key employees, officers and non-employee directors. The RSUs granted to key employees and officers vest and are converted to common stock in three equal installments on each of the first three anniversaries of the grant date, provided that a portion of the RSUs awarded to an officer prior to 2018 vest only upon the officer's retirement. Retirement, for purposes of vesting in these RSUs only, means termination of employment with approval of the Compensation and Executive Development Committee of the Board of Directors after satisfying age and years of service requirements. RSUs granted to a non-employee director are fully vested on the grant date and are payable to the non-employee director in the form of common stock after the termination of the director's service on the Board of Directors.

RSUs granted to employees who are eligible for retirement on the date of the grant are expensed immediately, and RSUs granted to employees who will become retirement-eligible prior to the end of the vesting term are expensed over the period through which the employee will become retirement-eligible since these awards vest upon retirement from the Company. Compensation expense for RSUs granted to employees who will not become retirement-eligible prior to the end of the vesting term is recognized on a straight-line basis over the vesting period.

Cash dividend equivalents are paid to holders of RSUs each quarter. Dividend equivalents paid on RSUs expected to vest are recognized as a reduction in retained earnings.

The fair value of an RSU is determined based on the closing price of Nucor's common stock on the date of the grant.

A summary of Nucor's RSU activity is as follows (shares in thousands):

	2021		2020		2019	
		Grant Date		Grant Date		Grant Date
Year Ended December 31,	Shares	Fair Value	Shares	Fair Value	Shares	Fair Value
Restricted stock units:						
Unvested at beginning of year	1,830	\$47.33	1,776	\$52.60	1,246	\$59.09
Granted	397	\$110.74	1,246	\$42.46	1,770	\$48.00
Vested	(997)	\$57.09	(1,166)	\$50.10	(1,207)	\$52.43
Canceled	(63)	\$49.54	(26)	\$49.75	(33)	\$57.09
Unvested at end of year	1,167	\$60.45	1,830	\$47.33	1,776	\$52.60

Compensation expense for RSUs was \$52.1 million in 2021 (\$58.6 million in 2020 and \$69.1 million in 2019). The total fair value of shares vested during 2021 was \$109.5 million (\$49.8 million in 2020 and \$58.8 million in 2019). As of December 31, 2021, unrecognized compensation expense related to unvested RSUs was \$43.5 million, which is expected to be recognized over a weighted-average period of 1.1 years.

Restricted Stock Awards

Prior to their expiration effective December 31, 2017, the Nucor Corporation Senior Officers Long-Term Incentive Plan and the Nucor Corporation Senior Officers Annual Incentive Plan authorized the award of shares of common stock to officers subject to certain conditions and restrictions. Effective January 1, 2018, the Company adopted supplements to the Omnibus Plan with terms that permit the award of shares of common stock to officers subject to the conditions and restrictions described below, which are substantially similar to those of the expired Senior Officers Long-Term Incentive Plan and Senior Officers Annual Incentive Plan. The expired Senior Officers Long-Term Incentive Plan, together with the applicable supplement, is referred to below as the "LTIP," and the expired Senior Officers Annual Incentive Plan, together with the applicable supplement, is referred to below as the "AIP."

The LTIP provides for the award of shares of restricted common stock at the end of each LTIP performance measurement period at no cost to officers if certain financial performance goals are met during the period. One-third of the LTIP restricted stock award vests upon each of the first three anniversaries of the award date or, if earlier, upon the officer's attainment of age 55 while employed by Nucor. Although participants are entitled to cash dividends and may vote such awarded shares, the sale or transfer of such shares is limited during the restricted period.

The AIP provides for the payment of annual cash incentive awards. An AIP participant may elect, however, to defer payment of up to one-half of an AIP award. In such event, the deferred AIP award is converted into common stock units and credited with a deferral incentive, in the form of additional common stock units, equal to 25% of the number of common stock units attributable to the deferred AIP award. Common stock units attributable to deferred AIP awards are fully vested. Common stock units credited as a deferral incentive vest upon the AIP participant's attainment of age 55 while employed by Nucor. Vested common stock units are paid to AIP participants in the form of shares of common stock following their termination of employment with Nucor.

A summary of Nucor's restricted stock activity under the AIP and the LTIP is as follows (shares in thousands):

	20	21		2020			20		
		Gra	ant Date		Gr	ant Date		Gr	ant Date
Year Ended December 31,	Shares	Fa	ir Value	Shares	Fa	ir Value	Shares	Fa	ir Value
Restricted stock units and restricted stock awards:									
Unvested at beginning of year	127	\$	49.94	147	\$	60.81	130	\$	62.97
Granted	262	\$	65.61	348	\$	36.15	316	\$	58.04
Vested	(273)	\$	62.17	(368)	\$	41.22	(299)	\$	58.82
Canceled	(9)	\$	48.75		\$	_		\$	_
Unvested at end of year	107	\$	57.17	127	\$	49.94	147	\$	60.81

Compensation expense for common stock and common stock units awarded under the AIP and the LTIP is recorded over the performance measurement and vesting periods based on the anticipated number and market value of shares of common stock and common stock units to be awarded. Compensation expense for anticipated awards based upon Nucor's financial performance, exclusive of amounts payable in cash, was \$79.9 million in 2021 (\$12.5 million in 2020 and \$16.6 million in 2019). The total fair value of shares vested during 2021 was \$19.6 million (\$13.5 million in 2020 and \$17.3 million in 2019). As of December 31, 2021, unrecognized compensation expense related to unvested restricted stock awards was \$1.3 million, which is expected to be recognized over a weighted-average period of 1.6 years.

17. Employee Benefit Plans

Nucor makes contributions to a Profit Sharing and Retirement Savings Plan for qualified employees based on the profitability of the Company. Nucor's expense for these benefits totaled \$869.9 million in 2021 (\$86.6 million in 2020 and \$181.4 million in 2019). The related liability for these benefits is included in salaries, wages and related accruals in the consolidated balance sheets.

Nucor also has a medical plan covering certain eligible early retirees. The unfunded obligation, included in deferred credits and other liabilities in the consolidated balance sheets, totaled \$29.3 million at December 31, 2021 (\$28.2 million at December 31, 2020). The expense associated with this early retiree medical plan totaled \$1.8 million in 2021 (\$2.5 million in 2020 and \$2.0 million in 2019). The discount rate used by Nucor in determining its benefit obligation was 2.81% in 2021 (2.40% in 2020 and 3.23% in 2019). The health care cost increase trend rate used was 5.3% in 2021 (5.7% in 2020 and 6.0% in 2019). The health care cost increase trend rate is projected to decline gradually to 4.0% by 2047.

18. Interest Expense (Income)

The components of net interest expense are as follows (in thousands):

	Year Ended December 31,						
	2021			2020		2019	
Interest expense	\$	163,121	\$	166,613	\$	157,358	
Interest income		(4,267)		(13,415)		(35,933)	
Interest expense, net	\$	158,854	\$	153,198	\$	121,425	

Interest paid was \$170.7 million in 2021 (\$181.2 million in 2020 and \$172.6 million in 2019).

19. Income Taxes

Components of earnings before income taxes and noncontrolling interests are as follows (in thousands):

	Year	Year Ended December 31,					
	2021	2021 2020					
United States	\$ 9,076,921	\$ 1,215,909	\$ 1,806,704				
Foreign	123,937	(380,371)	(23,897)				
	\$ 9,200,858	\$ 835,538	\$ 1,782,807				

The provision for income taxes consists of the following (in thousands):

	Year Ended December 31,					
	2021 2020		2019			
Current:						
Federal	\$ 1,753,376	\$ (177,159)	\$ 241,074			
State	293,752	(4,298)	62,685			
Foreign	19,695	18,131	8,981			
Total current	2,066,823	(163,326)	312,740			
Deferred:						
Federal	10,916	177,035	101,946			
State	(3,042)	(25,500)	8,013			
Foreign	3,791	11,301	(10,802)			
Total deferred	11,665	162,836	99,157			
Total provision for income taxes	\$ 2,078,488	\$ (490)	\$ 411,897			

A reconciliation of the federal statutory tax rate (21%) to the total provision is as follows:

	Year Ended December 31,					
	2021	2020	2019			
Taxes computed at statutory rate	21.00%	21.00%	21.00%			
State income taxes, net of federal income tax benefit	2.49%	-3.37%	3.16%			
Federal research credit	-0.07%	-0.79%	-0.34%			
Equity in losses of foreign joint venture	_	0.64%	0.19%			
Impairment on investment in foreign joint venture	_	11.20%	_			
Tax loss on investment in foreign joint venture	_	-22.73%	_			
Foreign rate differential	-0.03%	1.15%	_			
Noncontrolling interests	-0.67%	-2.88%	-1.18%			
CARES Act NOL carryback	_	-5.77%	_			
Other, net	-0.13%	1.49%	0.27%			
Provision for income taxes	22.59%	-0.06%	23.10%			

For the year ended December 31, 2021, the effective tax rate on continuing operations was 22.59% compared to -0.06% for the year ended December 31, 2020.

The 2020 effective tax rate included a net tax benefit of \$201.9 million (-24.16%, -22.73% included in the tax loss on investment in foreign joint venture line and -1.43% included in the state income taxes, net of federal income tax benefit line) for a tax loss on our investment in a foreign joint venture, a net tax benefit of \$45.2 million (-5.41%, included in the state income taxes, net of federal income tax benefit line) for state tax credits, and a federal tax benefit of \$48.2 million (-5.77%, included in the CARES Act NOL carryback line) for the carryback of a federal tax net operating loss (an "NOL") under the Coronavirus Aid, Relief, and Economic Security Act (the "CARES Act"). These benefits were all recognized in 2020 and were partially offset by the rate impact (11.20%) of financial statement impairments of \$445.6 million which did not affect the provision for income taxes. The CARES Act allows for an NOL generated in 2020 to be carried back to taxable years where the federal income tax rate was 35%. The difference in the tax rate in 2020 and tax years before the enactment of the Tax Cuts and Jobs Act of 2017 is the main driver of the federal tax NOL benefit in 2020, but this was partially offset by the partial loss of the domestic manufacturing deduction in the carryback year.

Deferred tax assets and liabilities resulted from the following (in thousands):

	 December 31,			
	2021		2020	
Deferred tax assets:				
Accrued liabilities and reserves	\$ 232,898	\$	171,998	
Allowance for doubtful accounts	34,124		16,434	
Inventory	81,437		62,755	
Post-retirement benefits	10,763		12,714	
Commodity hedges	243		4,033	
Net operating loss carryforward	38,290		63,952	
Tax credit carryforwards	172,629		187,267	
Other deferred tax assets	11,336		10,674	
Valuation allowance	 (183,759)		(207,653)	
Total deferred tax assets	397,961		322,174	
Deferred tax liabilities:	_			
Holdbacks and amounts not due under contracts	(13,956)		(14,051)	
Intangibles	(178,304)		(177,061)	
Property, plant and equipment	(770,791)		(680,688)	
Book/Tax differences on debt modifications	(45,173)		(46,813)	
Total deferred tax liabilities	(1,008,224)		(918,613)	
Total net deferred tax liabilities	\$ (610,263)	\$	(596,439)	

Non-current deferred tax liabilities included in deferred credits and other liabilities in the consolidated balance sheets were \$610.3 million at December 31, 2021 (\$596.4 million at December 31, 2020). Current federal and state income taxes receivable included in other current assets in the consolidated balance sheets were \$115.2 million at December 31, 2021 (\$456.1 million at December 31, 2020). Nucor paid \$1.68 billion in net federal, state and foreign income taxes in 2021 (\$50.3 million and \$525.2 million in 2020 and 2019, respectively).

Nucor has not recognized deferred tax liabilities on its investment in foreign subsidiaries with undistributed earnings that satisfy the permanent reinvestment requirements (the deferred tax liabilities on the investments not permanently reinvested are immaterial). While Nucor considers future earnings to be permanently reinvested, it is expected that potential future distributions will likely be of a nontaxable manner. If this assertion of permanent reinvestment were to change, there may be deferred tax liabilities related to the withholding tax impacts on the actual distribution of certain cumulative undistributed foreign earnings, but the Company believes this amount to be immaterial.

State NOL carryforwards were \$380.1 million at December 31, 2021 (\$1.41 billion at December 31, 2020). If unused, they will expire between 2022 and 2041. Foreign NOL carryforwards were \$113.6 million at December 31, 2021 (\$142.3 million at December 31, 2020). If unused, the foreign NOL carryforwards will expire between 2025 and 2041.

At December 31, 2021, Nucor had approximately \$95.1 million of unrecognized tax benefits, of which \$94.4 million would affect Nucor's effective tax rate, if recognized. At December 31, 2020, Nucor had approximately \$48.0 million of unrecognized tax benefits, of which \$47.3 million would affect Nucor's effective tax rate, if recognized.

A reconciliation of the beginning and ending amounts of unrecognized tax benefits recorded in deferred credits and other liabilities in the consolidated balance sheets is as follows (in thousands):

	December 31,					
		2021		2020		2019
Balance at beginning of year	\$	47,965	\$	50,920	\$	48,605
Additions based on tax positions related to current year		52,853		4,138		9,272
Reductions based on tax positions related to current year		_		_		_
Additions based on tax positions related to prior years		2,405		223		2,106
Reductions based on tax positions related to prior years		(3,060)		_		(2,863)
Reductions due to settlements with taxing authorities						(1,514)
Reductions due to statute of limitations lapse		(5,027)		(7,316)		(4,686)
Balance at end of year	\$	95,136	\$	47,965	\$	50,920

We estimate that in the next 12 months, our gross uncertain tax positions, exclusive of interest, could decrease by as much as \$10.4 million, as a result of the expiration of the applicable statute of limitations.

During 2021, Nucor recognized \$5.5 million of expense in interest and penalties (\$0.1 million of expense in 2020 and \$0.7 million of expense in 2019). The interest and penalties are included in interest expense, net and marketing, administrative and other expenses, respectively, in the consolidated statements of earnings. As of December 31, 2021, Nucor had approximately \$17.5 million of accrued interest and penalties related to uncertain tax positions (approximately \$12.0 million as of December 31, 2020). The accrued interest and penalties are included in accrued expenses and other current liabilities and deferred credits and other liabilities, respectively, in the consolidated balance sheets.

Nucor has concluded U.S. federal income tax matters for tax years through 2014 and for tax year 2016. The tax years 2015 and 2017 through 2020 remain open to examination by the Internal Revenue Service. The 2015 Canadian income tax returns for Harris Steel Group Inc. and certain related affiliates are currently under examination by the Canada Revenue Agency. The tax years 2015 through 2020 remain open to examination by other major taxing jurisdictions to which Nucor is subject (primarily Canada and other state and local jurisdictions).

20. Accumulated Other Comprehensive Income (Loss)

The following tables reflect the changes in accumulated other comprehensive income (loss) by component (in thousands):

	Gains and (Lo Hedging Der		oreign Currency Gains (Losses)	Adjustment to Early Retiree Medical Plan	Total
December 31, 2020	\$	(4,700)\$	(120,827)	\$ 6,666	\$(118,861)
Other comprehensive income (loss) before reclassifications		15,112	(4,041)	1,875	12,946
Amounts reclassified from accumulated other comprehensive income		(0.200)		(67)	(0.267)
(loss) into earnings (1)		(9,300)		(67)	(9,367)
Net current-period other comprehensive income (loss)		5,812	(4,041)	1,808	3,579
December 31, 2021	\$	1,112 \$	(124,868)	\$ 8,474	\$(115,282)

(1) Includes \$(9,300) and \$(67) net-of-tax impact of accumulated other comprehensive income (loss) reclassifications into cost of products sold for net gains on commodity contracts and adjustment to early retiree medical plan, respectively. The tax impacts of these reclassifications were \$(3,100) and \$(10) respectively.

	Gains and (Le Hedging De		Foreign Currency Gains (Losses)	Adjustment to Early Retiree Medical Plan	Total
December 31, 2019	\$	(14,000)\$	(296,773)	\$ 7,807	\$(302,966)
Other comprehensive income (loss) before reclassifications		2,084	17,306	(1,213)	18,177
Amounts reclassified from accumulated other comprehensive income (loss) into earnings (2)		7,216	158,640	72	165,928
Net current-period other		1,210	130,040	12	103,920
comprehensive income (loss)		9,300	175,946	(1,141)	184,105
December 31, 2020	\$	(4,700)	(120,827)	\$ 6,666	\$(118,861)

(2) Includes \$7,216 and \$72 net-of-tax impact of accumulated other comprehensive income (loss) reclassifications into cost of products sold for net losses on commodity contracts and adjustment to early retiree medical plan, respectively. The tax impacts of these reclassifications were \$2,500 and \$17, respectively. Also includes a \$158.6 million reclassification of cumulative foreign currency translation losses into losses and impairments of assets, of which there was no tax impact.

In December 2020, Nucor closed on an agreement to transfer its 50% interest in Duferdofin Nucor to the owner of the remaining 50% interest. As a result, \$158.6 million of cumulative foreign currency translation losses related to our investment was reclassified into earnings in the fourth quarter of 2020. The non-cash charge is included in the steel mills segment and in losses and impairments of assets in the consolidated statement of earnings for the year ended December 31, 2020.

21. Earnings Per Share

The computations of basic and diluted net earnings per share are as follows (in thousands, except per share data):

Year Ended December 31,	2021	 2020	 2019
Basic net earnings per share:

22. Segments

Nucor reports its results in the following segments: steel mills, steel products and raw materials. The steel mills segment includes carbon and alloy steel in sheet, bars, structural and plate; steel trading businesses; rebar distribution businesses; and Nucor's equity method investments in NuMit and Nucor-JFE. The steel products segment includes steel joists and joist girders, steel deck, fabricated concrete reinforcing steel, cold finished steel, precision castings, steel fasteners, metal building systems, insulated metal panels, steel grating, tubular products businesses, steel racking, piling products business, and wire and wire mesh. The raw materials segment includes The David J. Joseph Company and its affiliates ("DJJ"), primarily a scrap broker and processor; Nu-Iron Unlimited and Nucor Steel Louisiana LLC, two facilities that produce direct reduced iron used by the steel mills; and our natural gas production operations.

Corporate/eliminations include items such as net interest expense on long-term debt, charges and credits associated with changes in allowances to eliminate intercompany profit in inventory, profit sharing expense and stock-based compensation. Corporate assets primarily include cash and cash equivalents, short-term investments, restricted cash and cash equivalents, allowances to eliminate intercompany profit in inventory, deferred income tax assets, federal and state income taxes receivable and investments in and advances to affiliates.

Nucor's results by segment were as follows (in thousands):

23. Revenue

Nucor recognizes revenue when obligations under the terms of contracts with our customers are satisfied and collection is reasonably assured; generally, obligations under the terms of contracts are satisfied upon shipment or when control is transferred. Revenue is measured as the amount of consideration expected to be received in exchange for transferring the goods. In addition, revenue is deferred when cash payments are received or due in advance of performance.

The durations of Nucor's contracts with customers are generally one year or less. Customer payment terms are generally 30 days.

Contract liabilities are primarily related to deferred revenue resulting from cash payments received in advance from customers to protect against credit risk. Contract liabilities totaled \$251.9 million as of December 31, 2021 (\$120.2 million as of December 31, 2020), and are included in accrued expenses and other current liabilities in the consolidated balance sheets. The amount of revenue reclassified from the December 31, 2020 contract liabilities balance during 2021 was approximately \$83.9 million.

Nucor disaggregates its revenues by major source in the same manner as presented in the net sales by product table in the segment footnote (see Note 22).

Steel Mills Segment

Sheet – For the majority of sheet products, we transfer control and recognize a sale when we ship the product from the sheet mill to our customer. The amount of consideration we receive and revenue we recognize for spot market sales are based upon prevailing prices at the time of sale. The amount of consideration we receive and revenue we recognize for contract customers are based primarily on pricing formulas that incorporate monthly or quarterly price adjustments which reflect changes in the current market-based indices and/or raw material costs near the time of shipment.

The amount of tons sold to contract customers at any given time depends on a variety of factors, including our consideration of current and future market conditions, our strategy to appropriately balance spot and contract tons in a manner to meet our customers' requirements while considering the expected profitability, our desire to sustain a diversified customer base and our end-use customers' perceptions about future market conditions. These contracts are typically one year or less. Contract sales within the steel mills segment are most notable in our sheet operations, as it is common for contract sales to account for the majority of sheet sales in a given year.

Bar, Structural and Plate – For the majority of bar, structural and plate products, we transfer control and recognize a sale when we ship the product from the mill to our customer. The significant majority of bar, structural and plate product sales are spot market sales, and the amount of consideration we receive and revenue we recognize for those sales are based upon prevailing prices at the time of sale.

Steel Products Segment

Tubular Products – The tubular products businesses transfer control and recognize a sale when the products are shipped from our operating locations to our customers. The majority of tubular product sales are spot market sales, and the amount of consideration we receive and revenue we recognize for those sales are based upon prevailing prices at the time of sale.

Included in the tubular products businesses is Hannibal Industries, Inc. ("Hannibal"), which was acquired in August 2021. The majority of Hannibal's revenues are related to supply and installation contracts. Revenue on Hannibal's supply and installation contracts is primarily recognized over time, typically between six months and two years, using the cost-to-cost input measure (e.g., costs incurred to date relative to total estimated costs at completion) to measure progress because it best depicts the transfer of assets to the customer which occurs as the Company incurs costs on the contracts.

Rebar Fabrication – The majority of revenue relates to revenue from contracts with customers for the supply of fabricated rebar. As the majority of contracts with customers are fixed price contracts to complete a job, control transfers over time and revenue is recognized (if collection is reasonably assured) over time using an input method, based on the amount of rebar shipped from the Company's operating locations relative to the total expected amount of rebar required to complete the job.

For contracts to supply fabricated rebar and install it at the customer's job site, there are two performance obligations: (1) the supply of the fabricated rebar and (2) the installation of the supplied rebar at the customer's job site. For the supply of fabricated rebar performance obligation, the transaction price allocated to this performance obligation is determined at the start of the contract, based on the awarded contract price for the supplied fabricated rebar and revenue is recognized over time based on the amount of rebar shipped from the Company's operating locations relative to the total expected amount of rebar required to complete the job. For the installation of supplied rebar performance obligation, the transaction price allocated to this performance obligation is determined at the start of the contract, based on the awarded contract price for the installation of fabricated rebar and revenue is recognized over time based on the amount of rebar installed relative to the total expected amount of rebar required to be installed to complete the job.

While a majority of the contracts with customers are fixed price contracts to complete a job, variable consideration can occur from contract modifications relating to change orders and price escalations caused by changes in underlying material costs. In these situations, the additional variable consideration is recognized cumulatively in the period in which the contract modification is approved and collection is reasonably assured unless the change order relates to additional distinct goods or services at standalone selling prices in which case they are accounted for prospectively. Management reviews these situations on a case-by-case basis and considers a variety of factors, including relevant experience with similar types of performance obligations, the Company's experience with the customer and collectability considerations.

Other Steel Products – Other steel products include our joist, deck, cold finish, metal building systems, insulated metal panels, piling and the other remaining businesses that comprise the steel products segment. Generally, for these businesses, we transfer control and recognize a sale when we ship the product from our operating locations to our customers. The amount of consideration we receive and revenue we recognize for those sales are agreed upon with the customers before the product is shipped.

Raw Materials Segment

The majority of the raw materials segment revenue from outside customers is generated by DJJ. We transfer control and recognize a sale based on the terms of the agreement with the customer, which is generally when the product has met the delivery requirements. The amount of consideration we receive and revenue we recognize for those sales is based on the contract with the customer, which generally reflects current market prices at the time the contract is entered into.

24. Restricted Cash and Cash Equivalents

As of December 31, 2021, restricted cash and cash equivalents totaled \$143.8 million (\$115.3 million as of December 31, 2020), and primarily consisted of net proceeds from the issuance of \$197.0 million in August 2021 and \$162.6 million in July 2020 of 40-year variable-rate Green Bonds. The restricted cash and cash equivalents related to the debt issuance are being held in a trust account and will be used to partially fund the capital costs, in particular the expenditures associated with pollution prevention and control (including waste recycling and waste reduction), of the construction of Nucor's plate mill located in Brandenburg, Kentucky. Funds will be disbursed from the trust account as qualified expenditures for the construction of the Brandenburg facility are made (\$168.5 million during 2021 and \$47.3 million during 2020). Interest earned on funds held in the trust account is subject to the same usage requirements as the bond proceeds principal. Since the restricted cash, interest and dividends must be used for the construction of the Brandenburg facility and relate to a long-term liability, the entire balance has been classified as a non-current asset.

25. Acquisitions

Acquisition of IMP Business of Cornerstone

On August 9, 2021, Nucor used cash on hand to acquire the assets of the IMP business of Cornerstone Building Brands, Inc. ("Cornerstone") for a purchase price of \$1.00 billion. The Company believes this acquisition will broaden the value-added solutions that Nucor Buildings group provides to targeted end markets such as warehousing, distribution and data centers. We expect these end-use markets to continue to grow in the coming years and that the use of IMP products within them will also increase. IMPs facilitate cost-effective climate control in the built environment and reduce energy usage and overall operations-related GHG emissions for owners and lessees. The acquired IMP business is comprised of two industry leading brands, CENTRIA and Metl-Span, and has seven manufacturing facilities located throughout North America, complementing Nucor's existing IMP business, TrueCore, LLC. The IMP business financial results are included as part of the steel products segment (see Note 22).

We have allocated the purchase price for the IMP business to its individual assets acquired and liabilities assumed. While the purchase price allocation is substantially complete, it is still preliminary and subject to change.

The following table summarizes the fair values of the assets acquired and liabilities assumed of the IMP business as of August 9, 2021, the date of acquisition (in thousands):

Cash	\$ _
Accounts receivable	49,869
Inventory	73,000
Other current assets	4,478
Property, plant and equipment	102,966
Goodwill	468,849
Other intangible assets	364,000
Other assets	 13,515
Total assets acquired	\$ 1,076,677
Current liabilities	45,320
Other liabilities	 12,855
Total liabilities assumed	\$ 58,175
Net assets acquired	\$ 1,018,502

The following table summarizes the purchase price allocation to the identifiable intangible assets of the IMP business as of August 9, 2021, the date of acquisition (in thousands, except years):

			Weighted-
			Average Life
Customer relationships	\$	309,000	10 years
Trademarks and trade names		45,000	10 years
Backlog		10,000	1 year
	<u>\$</u>	364,000	

The goodwill of \$468.8 million is calculated as the excess of the purchase price over the fair values of the assets acquired and liabilities assumed and has been allocated to the steel products segment (see Note 8). The goodwill is attributable to expected synergies within the steel products segment. Goodwill recognized for tax purposes was \$468.8 million, all of which is deductible for tax purposes.

Acquisition of Hannibal

On August 20, 2021, Nucor used cash on hand to acquire Hannibal for a purchase price of \$370.0 million. Nucor purchased 100% of Hannibal's outstanding shares from its Employee Stock Ownership Plan. Hannibal is a leading national provider of steel racking solutions to warehouses. We expect that Hannibal's business, serving customers in the e-commerce, industrial, food storage and retail segments, will also continue to grow in the coming years. Hannibal has manufacturing facilities in Los Angeles and Houston, as well as three distribution centers.

We have allocated the purchase price for Hannibal to its individual assets acquired and liabilities assumed. While the purchase price allocation is substantially complete, it is still preliminary and subject to change.

The following table summarizes the fair values of the assets acquired and liabilities assumed of Hannibal as of August 20, 2021, the date of acquisition (in thousands):

Cash	\$ 124,655
Accounts receivable	115,728
Inventory	65,005
Other current assets	2,113
Property, plant and equipment	116,955
Goodwill	84,922
Other intangible assets	201,700
Other assets	8,776
Total assets acquired	\$ 719,854
Current liabilities	228,750
Finance lease obligations	80,124
Other liabilities	13,155
Total liabilities assumed	\$ 322,029
Net assets acquired	\$ 397,825

The following table summarizes the purchase price allocation to the identifiable intangible assets of Hannibal as of August 20, 2021, the date of acquisition (in thousands, except years):

		Weighted-
		Average Life
Customer relationships	\$ 144,000	10 years
Trademarks and trade names	26,000	7 years
Backlog	 31,700	1 year
	\$ 201,700	

The goodwill of \$84.9 million is calculated as the excess of the purchase price over the fair values of the assets acquired and liabilities assumed and has been allocated to the steel products segment (see Note 8). The goodwill is attributable to expected synergies within the steel products segment. Goodwill recognized for tax purposes was \$84.9 million, all of which is deductible for tax purposes. Hannibal's financial results are included as part of the steel products segment (see Note 22).

Together, the acquisitions of the IMP business and Hannibal reflect the Company's strategy to target the fastest growing segments of steel intensive construction markets.

The results of operations for the IMP business of Cornerstone and Hannibal, upon the respective effective dates of the transactions, have been included in the accompanying consolidated financial statements. Pro-forma results of operations of the Company would not be materially different as a result of the acquisitions of the IMP business of Cornerstone and Hannibal and, therefore, this information is not presented.

Other Acquisitions

Other smaller acquisitions, exclusive of purchase price adjustments of acquisitions made and net of cash acquired, totaled \$134.8 million in 2021, \$88.1 million in 2020 and \$83.1 million in 2019.

26. Subsequent Event

On February 1, 2022, Nucor acquired a majority ownership position in California Steel Industries, Inc. ("CSI") by purchasing a 50% equity interest from a subsidiary of Vale S.A. for a cash purchase price of \$400 million, adjusted for net debt and working capital at closing, as well as a 1% equity ownership stake from JFE. CSI is a flat-rolled steel converter with the capability to produce more than two million tons of finished steel and steel products annually. The company has five product lines, including hot rolled, pickled and oiled, cold rolled, galvanized and electric resistance welded pipe. Key end-use markets served by CSI include customers in the construction, service center and energy industries.

- (1) Second quarter 2021 results include a \$42.0 million non-cash impairment charge related to the write-off of a portion of our leasehold interest in unproved oil and natural gas properties. This charge is included in the raw materials segment.
- (2) First quarter 2020 results include losses on assets of \$287.8 million related to our investment in Duferdofin Nucor. Third quarter 2020 results include a restructuring charge of \$16.4 million related to the realignment of Nucor's metal buildings business. Fourth quarter 2020 results include non-cash impairment charges totaling \$130.2 million related to impairments of certain inventory and long-lived assets in the steel mills segment (\$103.2 million) and the write-down of our unproved natural gas well assets in the raw materials segment (\$27.0 million). Also included in fourth quarter 2020 results were losses on assets of \$184.0 million related to the Duferdofin Agreement, a \$201.9 million tax benefit related to our investment in Duferdofin Nucor, a \$39.7 million net benefit related to state tax credits and a net benefit of \$48.2 million for the CARES Act NOL carryback provision.

Item 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

Evaluation of Disclosure Controls and Procedures – As of the end of the period covered by this report, the Company carried out an evaluation, under the supervision and with the participation of the Company's management, including the Company's Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of the Company's disclosure controls and procedures. Based upon that evaluation, the Chief Executive Officer and the Chief Financial Officer concluded that the Company's disclosure controls and procedures were effective as of the evaluation date.

Changes in Internal Control Over Financial Reporting – There were no changes in our internal control over financial reporting during the quarter ended December 31, 2021 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Report on Internal Control Over Financial Reporting – Management's report on internal control over financial reporting required by Section 404 of the Sarbanes-Oxley Act of 2002 and the attestation report of PricewaterhouseCoopers LLP, an independent registered public accounting firm, on the effectiveness of Nucor's internal control over financial reporting as of December 31, 2021 are included in "Item 8. Financial Statements and Supplementary Data" and incorporated herein by reference.

Item 9B. Other Information

None.

Item 9C. Disclosure Regarding Foreign Jurisdictions that Prevent Inspections

Not applicable.

PART III

Item 10. Directors, Executive Officers and Corporate Governance

The information required by this item with respect to Nucor's executive officers appears in Part I of this report under the heading *Information About Our Executive Officers* and is incorporated herein by reference. The other information required by this item is incorporated herein by reference from Nucor's definitive proxy statement for our 2022 Annual Meeting of Stockholders (the "Proxy Statement") under the headings *Election of Directors; Information Concerning Experience, Qualifications, Attributes and Skills of the Nominees;* and *Corporate Governance and Board of Directors.*

Nucor has adopted a Code of Ethics for Senior Financial Professionals (the "Code of Ethics"), which is intended to qualify as a "code of ethics" within the meaning of Item 406 of Regulation S-K of the Securities Exchange Act of 1934, as amended. The Code of Ethics applies to our principal executive officer, principal financial officer, principal accounting officer or controller, and persons performing similar functions. The Code of Ethics is available on our website, *www.nucor.com*.

We will disclose information pertaining to any amendment to, or waiver from, the provisions of the Code of Ethics that apply to our principal executive officer, principal financial officer, principal accounting officer or controller, or persons performing similar functions and that relate to any element of the Code of Ethics enumerated in the SEC rules and regulations by posting this information on our website, www.nucor.com. The information contained on our website or available by hyperlink from our website is not a part of this report and is not incorporated into this report or any other documents we file with, or furnish to, the SEC.

Item 11. Executive Compensation

The information required by this item is incorporated herein by reference from the Proxy Statement under the headings *Executive Officer Compensation; Director Compensation; Report of the Compensation and Executive Development Committee*; and *Board's Role in Risk Oversight*.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

The information required by this item is incorporated herein by reference from the Proxy Statement under the headings Security Ownership of Management and Certain Beneficial Owners and Equity Compensation Plan Information.

Item 13. Certain Relationships and Related Transactions, and Director Independence

The information required by this item is incorporated herein by reference from the Proxy Statement under the heading *Corporate Governance and Board of Directors*.

Item 14. Principal Accountant Fees and Services

The information required by this item is incorporated herein by reference from the Proxy Statement under the heading Fees Paid to Independent Registered Public Accounting Firm.

PART IV

Item 15. Exhibits and Financial Statement Schedules

Financial Statements:

The following consolidated financial statements and notes thereto, management's report on internal control over financial reporting and the report of independent registered public accounting firm are included in "Item 8. Financial Statements and Supplementary Data":

- Management's Report on Internal Control Over Financial Reporting
- Report of Independent Registered Public Accounting Firm
- Consolidated Balance Sheets—December 31, 2021 and 2020
- Consolidated Statements of Earnings—Years Ended December 31, 2021, 2020 and 2019
- Consolidated Statements of Comprehensive Income—Years Ended December 31, 2021, 2020 and 2019
